

Lecture Notes for EE392m

Dimitry Gorinevsky

Control Engineering Methods in Industry

Winter 2003

Contents

1. Introduction and history
 2. Modeling and simulation
 3. Control engineering approach
 4. PID control
 5. Feedforward
 6. SISO loop analysis
 7. SISO system design
 8. Model identification
 9. Processes with deadtime, IMC
 10. Multivariable optimization for control
 11. Optimal control program
 12. MPC - receding horizon control
 13. Handling nonlinearity
 14. System health management
 15. Overview of advanced topics
- Problems
