thyme

Designed and Developed by Cyan D., Hunter Z., Dia C., Anna G. in CS147 Fall 2023
https://web.stanford.edu/class/cs147/projects/AccessingHealthcare/Thyme/

take thyme. be well.

Problem

Effective communication between **medical professionals** and **patients** can be **challenging**, *especially* for patients with **multiple medications**

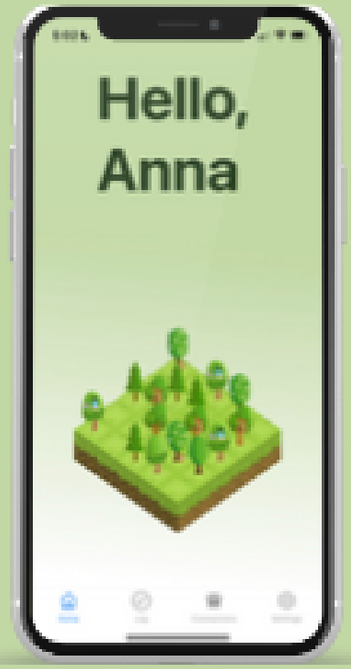
Solution

Medication journal app that helps users **track** their medication + corresponding **symptoms** and **other family/friends'** medication progress.

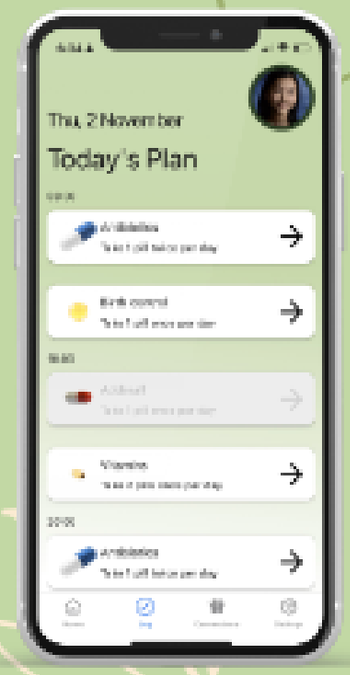
Our Value Proposition

Our app **gamifies user consistency,** through a Duolingo-like "streak" feature. These streaks are visualized through the **user's garden**, which gains a plant every time the user reaches a milestone.

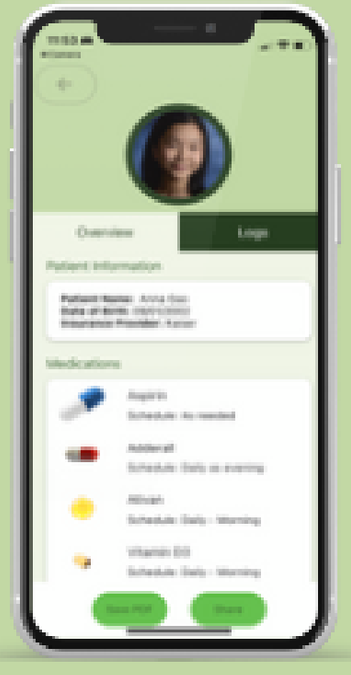
Key Features



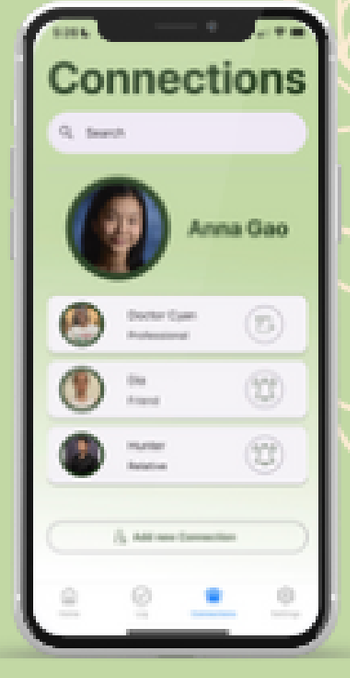
Home Screen



Medication Tracking



Generated Reports



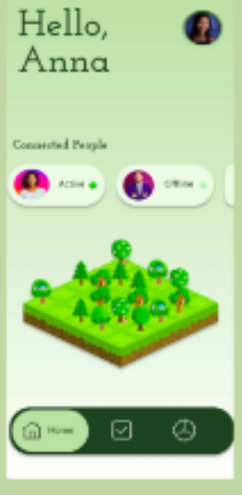
User Connectivity

Design Iterations

1. Needfinding

2. User Testing

3. Low-Fi Prototype



4. Med-Fi Prototype
