MobileEyes
A New Approach to Reduce Visually-Induced Motion Sickness
Jackie Becker, Thu Ngo
EE267: Virtual Reality, Stanford University

OUR PROBLEM:
Motion sickness makes virtual environments inaccessible to some users.

OUR SOLUTION:
We utilized the concept of “anchoring” to reduce visually-induced motion sickness.

OUR RESULTS:
MobileEyes increased user comfort, as well as user enjoyment of the experience.

Comfort After Adding Anchor
- Increase: 66.6%
- Decrease: 33.3%
