

# Falcon City: An Integration of Novint Falcon in Virtual Reality

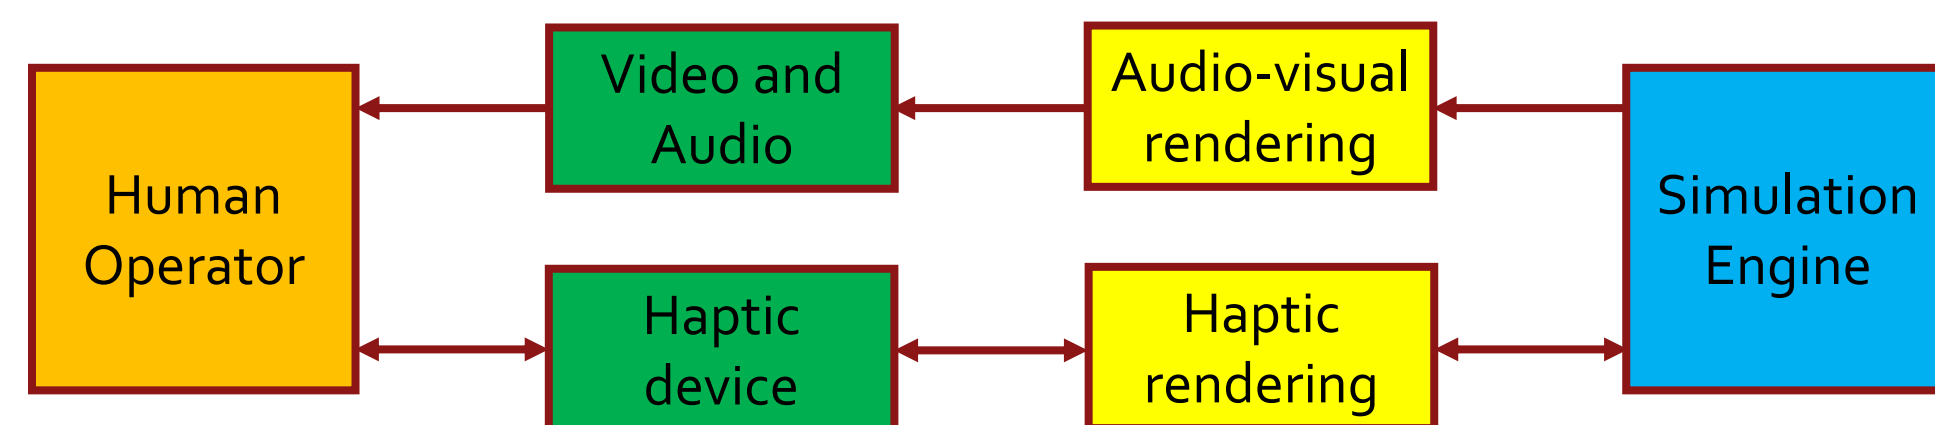

Jihee Hwang, Cheng Chen  
Stanford University

## Haptic Devices and Novint Falcon

### Benefits of Haptic Devices

Allowing users to "feel" virtual objects in simulated environment

### Rendering Flow with Haptic Devices

### Novint Falcon

With 3 degree of freedom, using USB interface with 1kHz update rate

### Other Haptic Devices

**Phantom Omni**  
Allowing user to manipulate virtual objects with 6-DOF

**Dexmo F2**  
Experiencing sensation of picking up objects in any virtual content

**Gloveone**  
Feeling and interacting with any object or environment in VR

**KOR-FX**  
Gaming vest worn by user and giving acoustic feedback in VR

## Preparation of Effects and Scenes

### Demonstration Target

Manipulating different objects with different texture effects to improve VR experience

### Capability of Novint Falcon SDK

- Obtaining current position
- Obtaining information on whether a button is pushed down
- Setting target position and/or target force

### Choice of Theme: SimCity

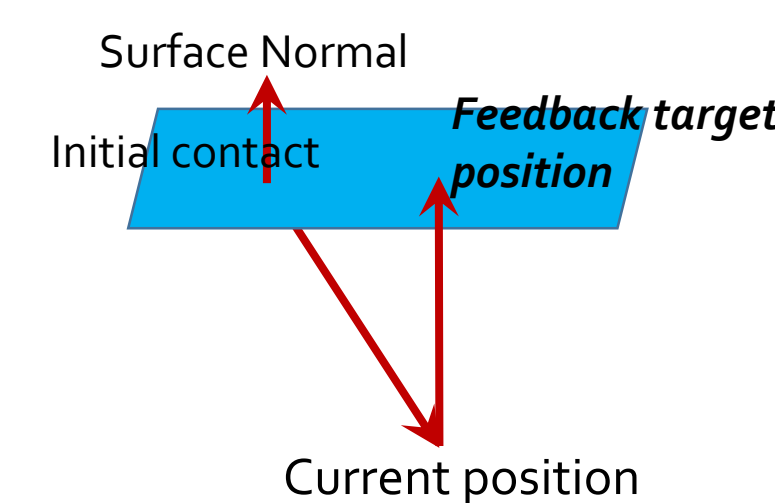

- Providing a context to interact with different materials (features)
- Integrating special effects with the buttons, e.g. popping a building
- Other theme options: operation/dissection, cooking etc.

## Implementation and Results

### Implementation of different effects

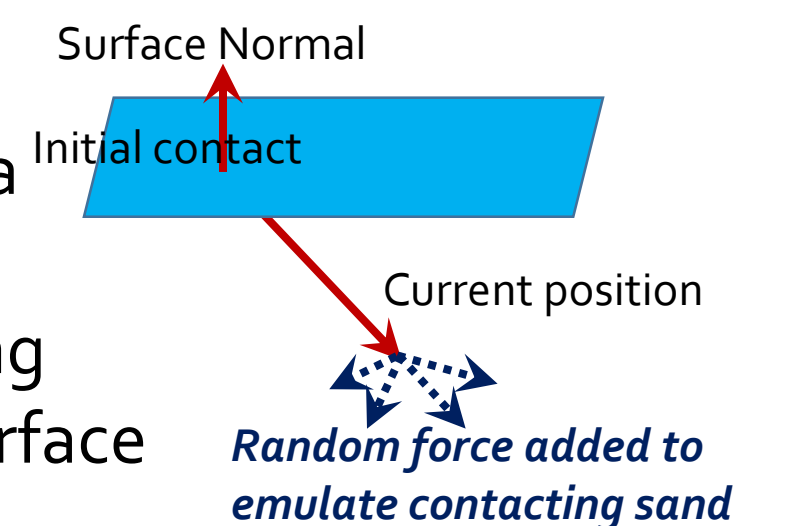

#### Solid surface

- Feedback to push Falcon-controlled object back to contact surface

#### Sand

- Feedback to add a random force to emulate the sliding and roughness surface

#### Water

- To give a force in opposite direction of surface normal, and proportional to depth

#### Pop

- If "Pop" button activated, transforming the contacting object with Falcon position
- Adding an opposite force when movement distance is below threshold value

### Scene Screenshots
