

Labor, and Pensions, and Stanford H
Morgan enjoys shopping in open ma
road trips, meeting new people, talk
with hot yoga.

*is that you want us.
is that you need us.*

Vivian T. Wong

Vivian Wong graduated from Stanford last year with a double major in International Relations and French. Currently she is working at two education nonprofits in the city, as part of a public service fellowship through the Haas Center. She was born with a congenital spinal disorder, called spondylathoracic dysplasia, which translates to a truncated torso, forward curvature of her spine, limited neck rotation and reduced lung capacity. From Hong Kong to the Bay Area, her condition has puzzled many doctors and, to this day, she has yet to meet someone with the same disability.

Due to her limited neck rotation, she would not be able to drive safely without the use of assistive technology. The installation of cameras to cover blind spots and pedal extensions allow her to drive independently.

Since her sophomore year, she's been committed to dispelling the stigma of the anti-normative and encouraging students with disabilities to advocate for themselves. At Stanford, she created "Power to ACT: Abilities Coming Together", a student group dedicated to safe social spaces for students with visible and hidden disabilities. Throughout college, she became more comfortable with her disability and welcomes you to ask her anything.

Manifestation of LD in Academics

- Problems with spelling
- Reading speed and accuracy
- Memory gaps
- Prolonged memory retention
