ENGR 110

Winter 2015

What is WHILL?

The Problem

Needs:

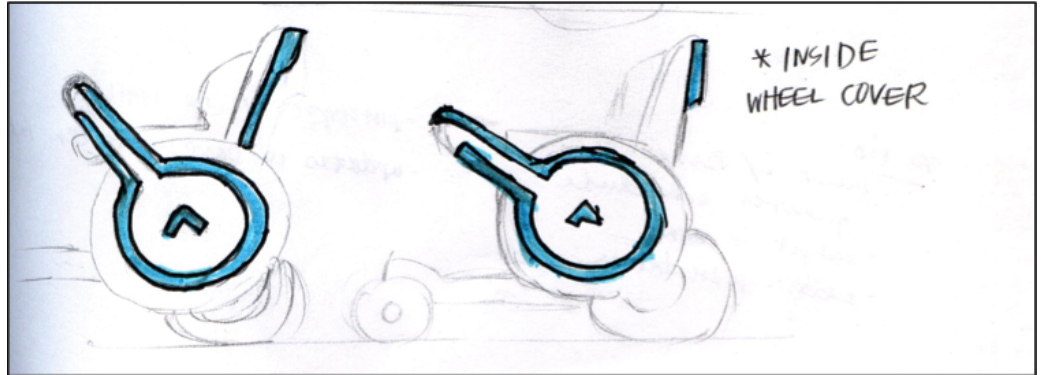

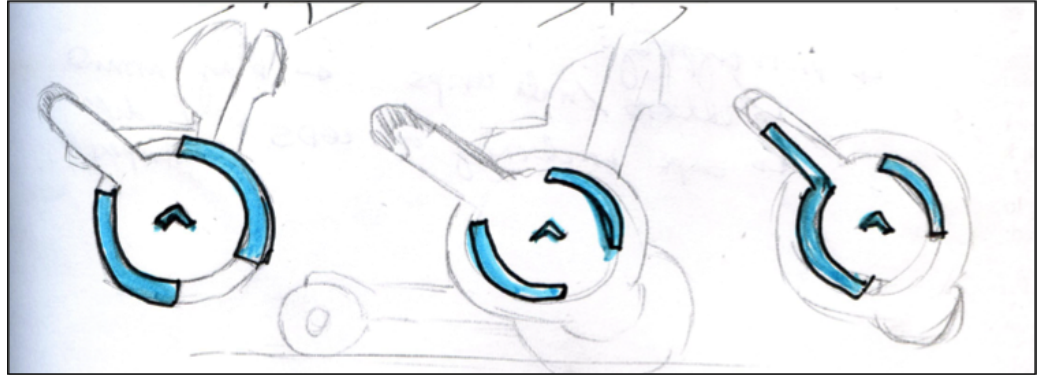

Ensure wheelchair users can travel safely at night

Ensure drivers are able to see wheelchair users

Initial Brainstorming

Initial Brainstorming

Initial Brainstorming

Visit to WHILL

Design Goals

1. Illumination

- Mostly forward illumination
- “Headlights” placed on wheelchair arms enable user to see immediate foreground and several feet ahead

Design Goals

2. Visibility

- For safety/comfort of user, as well as other people on the road or sidewalk
- Form outline on sides of wheelchair
- Futuristic (but still recognizable) design

Design Goals

3. 'Cool' Factor

- Automatic light sensor as well as a manual override switch
- Integrated with WHILL's unique design
- Light show!

RGB LED Strips
