Beneficial Designs, Inc. Minden, NV **Beneficial Design** Designing Beyond the Norm to Meet the Needs of All People

Research Design Education

Stanford University 19 February 2019 Peter Axelson

Designing beyond the norm to meet the needs of all people

## **Beneficial Designs' Mission Statement**

Beneficial Designs works towards universal access through research, design, and education. We believe all individuals should have access to the physical, intellectual, and spiritual aspects of life.

and the norm to meet the needs of all people

## Beneficial Designs' Mission Statement

We seek to enhance the quality of life for people of all abilities, and work to achieve this aim by developing and marketing technology for daily living, vocational, and leisure activities.

## The best profiles were fully developed and tested

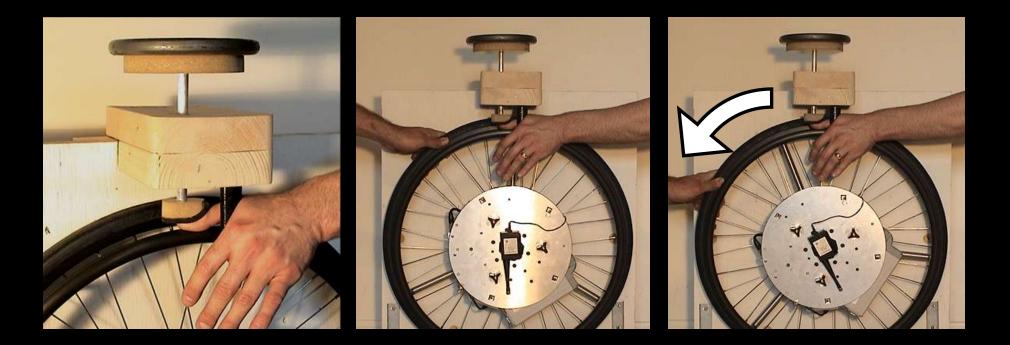

## FlexRim Ergonomic Pushrim

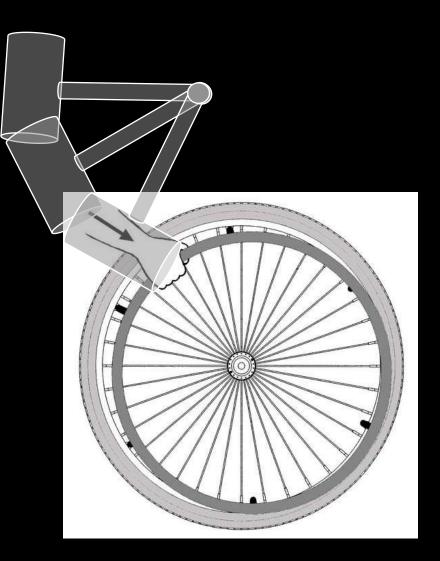

# **Frictional improvements**

# Preliminary tests show over a 2x increased frictional coefficient

# Impact absorption

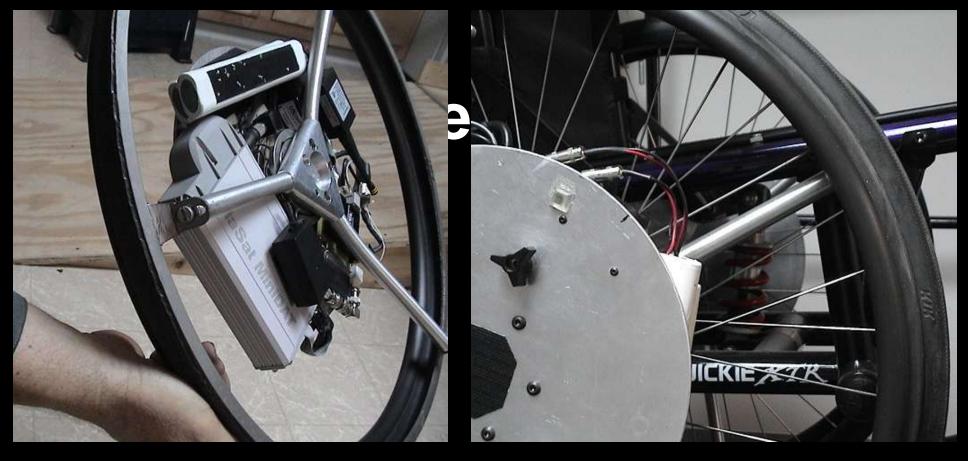

# Applied a 120 lb repetitive load in one place until failure

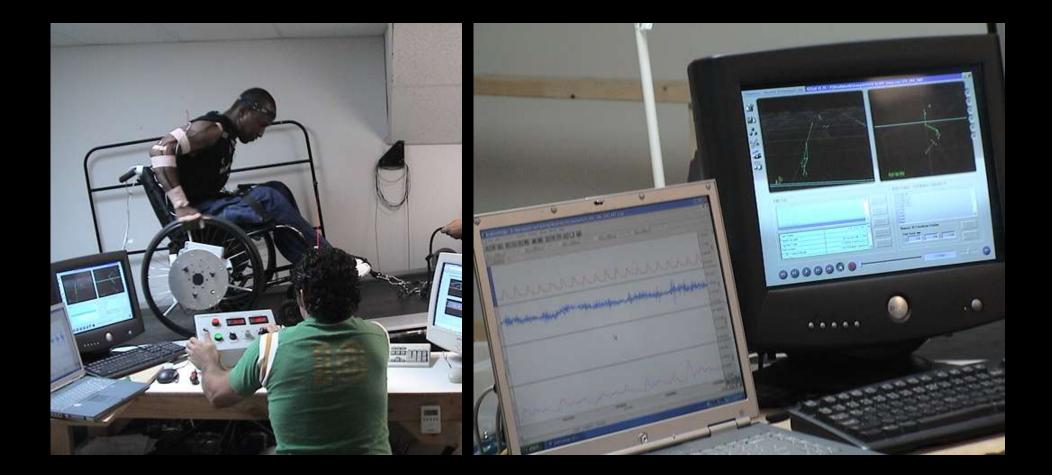

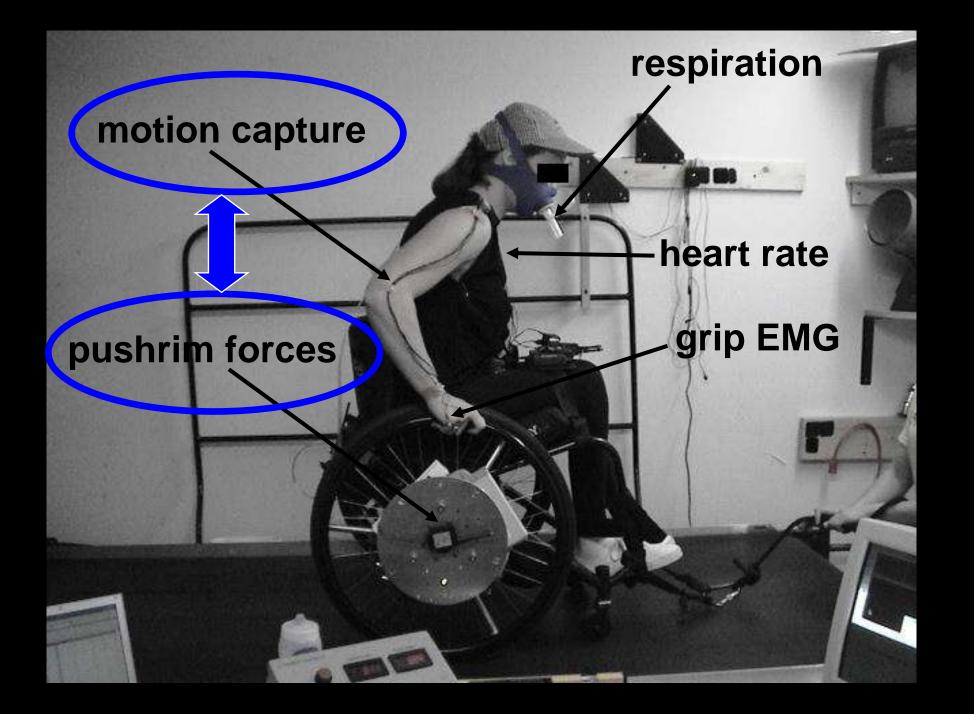

Pushrim cracked after 444,072 cycles

# **Baseline study – FlexRim**

# Subjects are tested over a wide variety of usage environments

### FlexRim

#### Design

The FlexRim consists of a durable high friction ubber rurface that spans between the aluminum pultrim and the when! The thap of the nubber is ergonomically designed to conform to your hand when gripped, making if the most comfortable pashtim guild ever use.

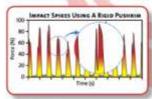

llecause the rubber is flexible, the pushrim can compress to allow your wheelchair to squeece through narrow doorways.

#### Overuse Injuries

Shoulder and wrist problems are very common among wheelchair users. Impact loading is one of the contributing factors. Your hands and arms absorb impact spikes when you first hill the pushtim, illustrated in the graph below.

 Reducing impact is one strategy recommended to help protect you from developing overuse injuries.

#### Impact Testing

Impact loading of the FlexRim was studied for a wide range of impact intensities.

 The Flexitim was found to consistently reduce impact loading by 10%.

#### Propulsion Testing

In lab testing, wheekhair users pushed with both a standard pushtim and the files@m on a research treadmill. Grip muscle activity, oxygen demand and power generated were all measured during propulsion and compared across pushtims.

Results of the testing were

- Users required 12% less grip force to push with the RexRim.
- Overall grip exertion was reduced by 15%.
- On average users required 12% Jess anyone to push with the Flexion than with a standard pushrum.
- Users generated IPS more power when using the FlexRim.

The ergonomic benefits of the Flexifim have been published in numerous scientific journals and in a PhD dissertation at Stanford University.

The State Coastal Conservancy is leading the implementation of the San Francisco Bay Area Water Trail (Water Trail) in close collaboration with the Association of Bay Area Governments (ABAG), the San Francisco Bay Conservation and Development Commission, and the Department of Boating and Waterways. The Water Trail is a growing network of access sites (or "trailheads") that will help people using non-motorized, small boats or other beachable sail craft, such as kayaks, cances, dragon boats, stand-up paddle and windsurf boards, to safely enjoy single and multiple-day trips around San Francisco Bay. http://scc.ca.gov/2010/07/30/san-francisco-bay-area-water-trail/

## www.trailexplorer.org

"moderate" trail? Have you ever encountered barriers on an "easy" trail? If so, you already know the benefits of having objective trail information. The Trail Explorer website conveys objective trail information in a unique <u>Trail Access Information</u> format to help trail users make informed decisions about which public lands to visit, and which trails will best meet their interests, abilities and desired experiences. Trail Explorer benefits all users, but is particularly helpful for individuals who may have specific trail needs, such as individuals with disabilities, older adults, parents with young children, and novice hikers.

#### Acknowledgement

Trail Explorer was designed by <u>Beneficial Designs</u> in collaboration with <u>American</u> <u>Trails</u>, land management, and disability organizations and with the support of the US Department of Education.

Universal Design of Amusement Park Rides for Persons with Mobility and Sensory Impairments

## **Focus on Air Travel**

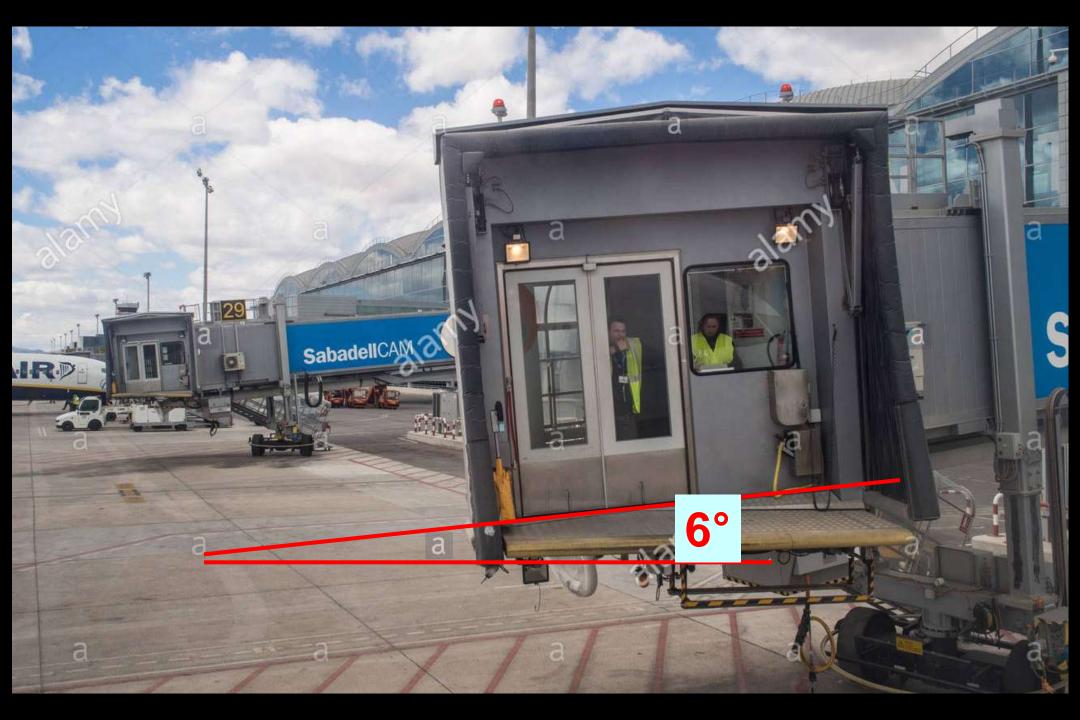

One focus area is air travel Assistive technologies Standards

# Issue 1: Steep Jetway Slopes

Typically steeper than standard ramp Dangerous for Mobility Device users Exempt from ADA guidelines

#### **Dangerous Environment**

Over 300 non-ambulatory passengers have been surveyed 12% have tipped over laterally in boarding chairs because of this problem

Causation is Jetway bubble area cross-slope of 6 to 14 degrees Boarding chairs have to be narrow and tip over at 7.5 degrees

#### **Potential Solution to Issue 1**

Develop technologies to level surface of bubble area of jetways

#### **Issue 2: Poor Boarding Devices**

Non-ambulatory passengers are transported onto aircraft using narrow boarding devices Current boarding devices have many design issues that non-ambulatory

passengers are dissatisfied with

## **Boarding devices**

Assessment of Traditional Aircraft Boarding Devices -Stability

**Chest support straps** 

Assessment of Aircraft Boarding Devices Observation

Arm supports provide lateral stability Foot support issues

#### **Potential Solutions to Issue 2**

Develop design specifications for improved boarding devices and on-board aisle chairs

# Issue 3: Dangerous Transfer Methods

Passengers who are non-ambulatory must often be physically transferred by untrained contractors to boarding chairs and then into AC seating This results in injuries to the

contractors and the passengers

#### Aircraft Compatible Wheelchair

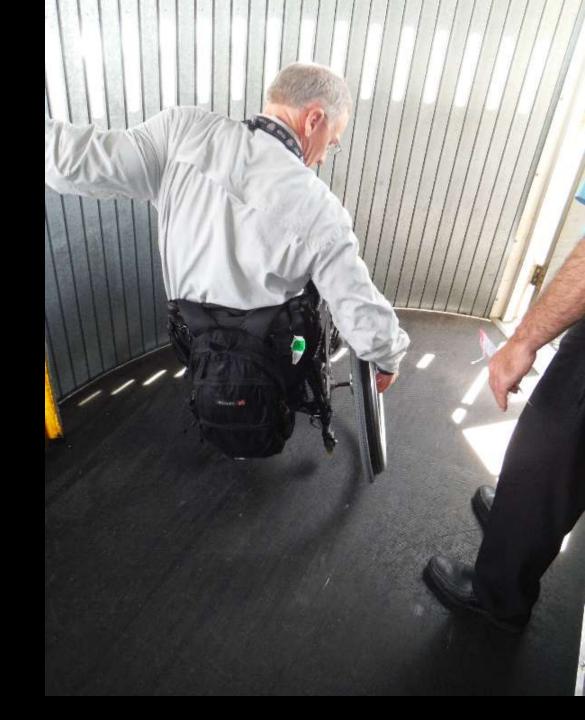

Aircraft Boarding Using a Personal Aisle Chair

Removable Wheels

Aircraft Boarding Using a wheelchair with narrow accessory wheels

Fewer Transfers

#### Aircraft Seating Using a Personal Aisle Chair

#### Feet Remain Secure

Transfer Assist Technology

> Overhead Lift track Safety for passengers attendant providers

#### Transfer Assist Technology Eagle Lift

#### Overhead Gantry Style Boarding Device

#### Transfer Assist Technology

# Moves laterally over aircraft seating

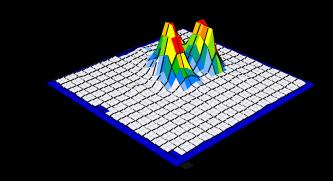

## Issue 4: Hazardous Sitting Pressures

Persons without sensation need pressure spread out to avoid sores

## **Boarding devices**

# Sitting on an S boarding device without cushion

Aircraft seating with pressure relief cushion from wheelchair

legs hanging shoulders forward neck extended arm not supported

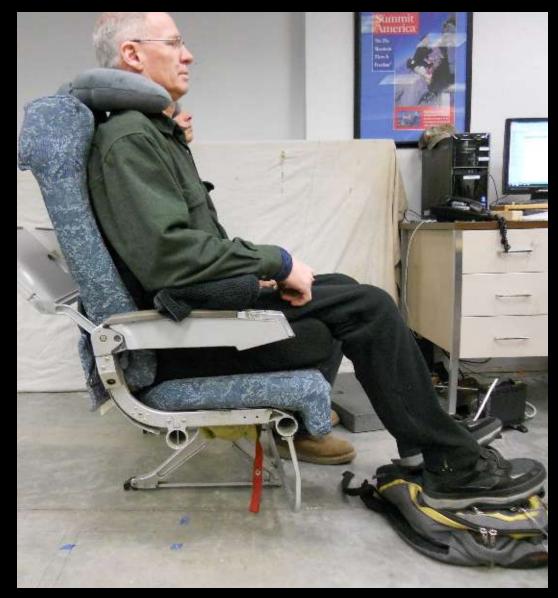

Aircraft seating with pressure relief cushion and "accessories"

foot support lumbar and spine support neck / head support arm support

Aircraft seating with pressure relief cushion and "accessories"

feet supported lumbar and spine supported neck / head support arm supported

#### **Potential Solution to Issue 4**

Educate travelers without sensation to use pressure relief seating accessories when sitting in aircraft Educate health-care professionals who serve travelers without sensation

Wide body aircraft have two aisles and bathrooms that transform into one large accessible bathroom
Medium and large size single aisle aircraft cannot do this without blocking the aisle

Passengers needing a personal caregiver are not accommodated by the current size of bathrooms Including infants and older adults and non-ambulatory passengers that must us an on board aisle wheelchair

Would only fly 2-3 hours without bathroom access

Explained that removal of three seats to create an more accessible bathroom would cost a 2% increase in fare (based on 145 person cap)

- 9 of 14 knew persons that need assistance in a bathroom
- 14 out of 15 people indicated they would pay for one larger bathroom

Explained that removal of six seats creates 1.2 inches of increased legroom which would create a 4% increase in fare

11 out of 14 people indicated they would pay some amount for more legroom – 50% want 2.4 inches more

#### **Potential Solutions to Issue 6**

Develop minimum clear width requirements for commercial aircraft....

To allow boarding device manufacturers to optimize the lateral stability of boarding devices

# Issue 7: Mobility Device (MD) Damage

MDs are often damaged MDs typically stored with baggage Manual wheelchairs Powered wheelchairs Scooters

# Examples of Damage

#### **Courtesy Open Doors and Global Repair Group**

Rehabilitation Institute of Chicago / Beneficial Designs / PVA #3028

Damage to drive wheel that came off powered wheelchair

Rehabilitation Institute of Chicago / Beneficial Designs / PVA #3028

## **Potential Solution to Issue 7**

Create design standards for Air Transportable Powered Wheelchairs through the RESNA Assistive Technology for Air Travel Standards Committee

## Assistive Technology for Air Travel Standards

Airline carriers and manufacturers Wheelchair manufacturers Disability organizations Government agencies – DOT - FAA Wheelchair repair companies

#### permobil Model: M300 Corpus HD Air Travel Configuration

Owner Name: John Smith Owner Phone: +1 012 345 6789 Owner Email: john.smith@gmail.com Chair Serial Number: 7200003

- 1 Remove Seat Cushion (User) Remove seat cushion; store in aircraft overhead bin.
- 2 Remove Head Support (User) Remove head support to store in aircraft overhead bin.
- 3 Lower Back Support to Fit Into Aircraft (User)

Remove the back support cushion. It is fixed in place by means of velcro on the rear of the cushion. Remove the upper section of the back support by carefully pulling it straight up. Using the control panel, tilt the back support forward. Store back support in aircraft overhead bin.

#### 4 Remove Joystick (User) 🚱

Remove joystick controller; store in aircraft overhead bin.

#### 5 Disengage Drive System 🚯

If the joystick controller is not removed, first shut off power using the control panel. Rotate the lever on each motor to disengage the motors and release the brakes, enabling the chair to be manually pushed.

#### 6 Isolate Battery Power 😂

Switch breaker to off to fully disconnect power.

#### 7 Raise Foot Supports

Move foot supports to upright position.

#### **Travel Configuration**

#### **Driving Configuration**

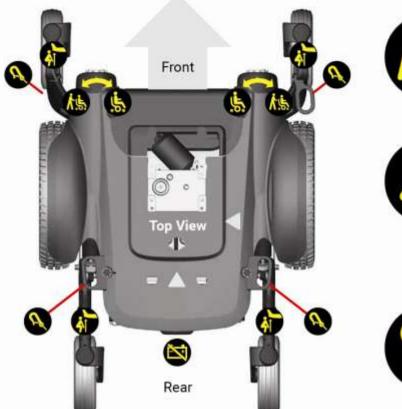

#### Unoccupied Product Weight (including accessories)

WARNING: This product should be lifted using a mechanical lift to avoid injury.

#### 450 lbs / 205 kg

#### Battery Information

WARNING: Only sealed lead acid group 34 batteries may be installed on this product. This wheelchair was manufactured with 2 lead acid sealed gel cell non-spillable batteries conforming to DOT CFR 173.159 (d), IATA Packing Instructions 806, and IATA Provision A67

#### Disengage Drive System

A manual brake release is located on each drive wheel that can be released to make it possible to move the chair manually. The brake release levers are located at the front of the wheelchair. Move levers outwards to disengage motors which releases the brakes.

#### Manual Lift Points

#### WARNING! This product should be lifted using a mechanical lift to avoid injury. Unnoccupied product weight is 450 lbs / 205 kg.

The Permobil M300 Corpus HD unoccupied weight is 450 lbs. Manual lifting requires multiple lifters. Use designated lift points!

Manual lift points are located on all four caster arms. When lifting chair with a device, use securement points.

#### Chair Securement

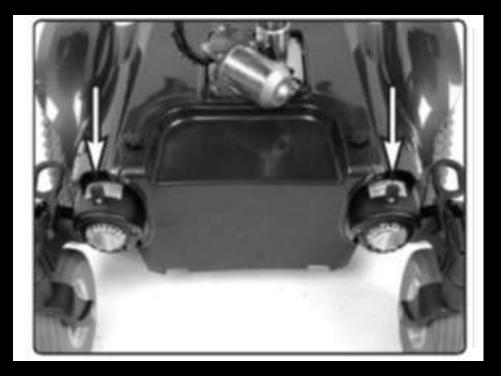

When fastening the chair, re-engage the drive system to lock the chair. Use fastening straps attached to the designated transport eye locations at the front and rear of the chair. Attach fastening strap to RESNA WC19 securement location.

#### Isolate Battery Power

The circuit breaker is located in the rear beneath the tail lights. It also acts as a battery isolator and is controlled via the lever located inside the hole at the bottom of the rear battery cover. Switch breaker to off to disconnect power from the battery.

The make and model of wheelchair selected to draft this prototype of an Air Travel Configuration card was selected based on the product having a built-in electrical isolation switch to isolate the batteries. The data was obtained from a user manual that was available online. Some values are estimated and do not necessarily represent the actual data for this product. The manufacturer of this product has not reviewed or approved this information.

Drive Disconnect Front of chair Move the levers **outwards to release** the brakes. The chair can now be moved manually.

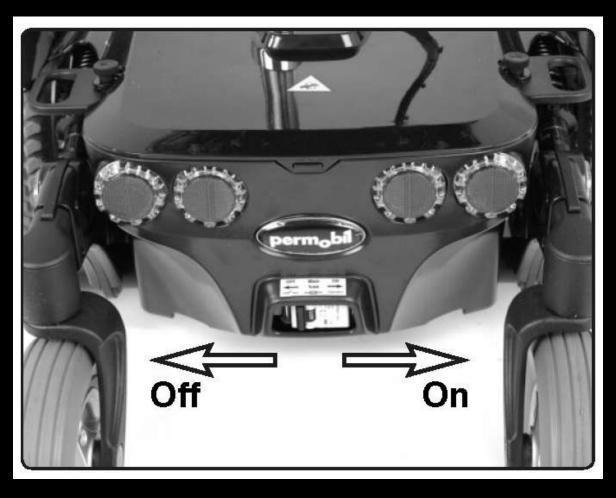

# PMD Labeling Guidelines weight

**WHEELCHAIR** 82 kg 180 lb WEIGHT

## PMD Labeling Guidelines Location of power disconnect

## **Air Travel Symbols**

Development of PMD Handler Training Procedures

> Experience of handling different types of PMDs may be infrequent for baggage handlers Prevention of injury to handlers Prevent damage to PMDs

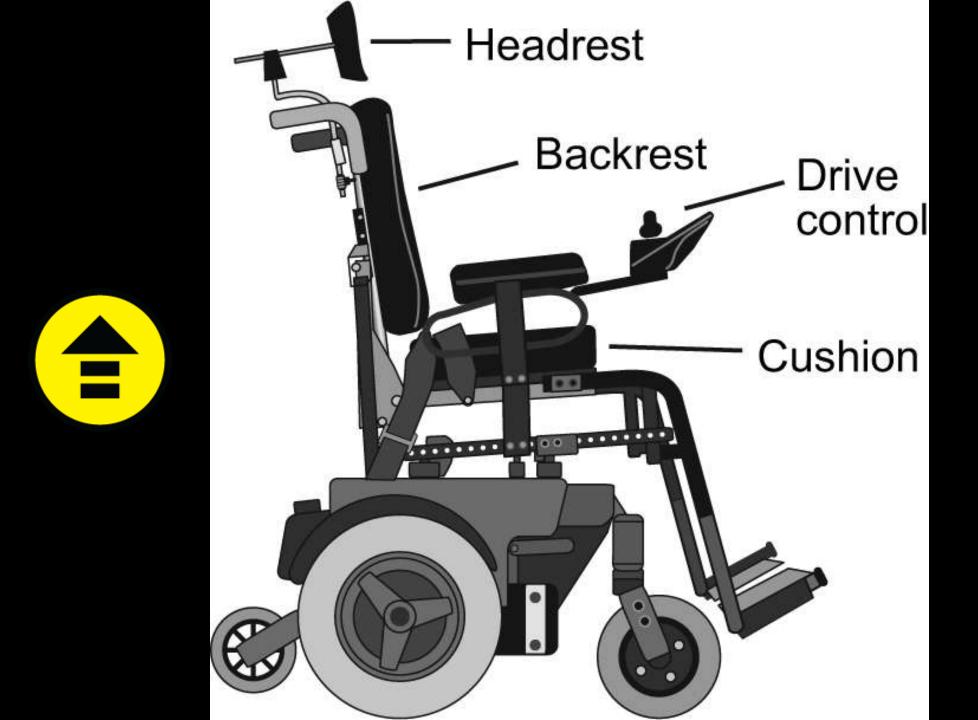

# Standards for PMDs designed for air transport

Create specifications for design features that will enable powered mobility devices to be able to withstand the rigors of being loaded and unloaded from aircraft

## **PMD** with transit option

## Identification of Power Disconnects
