16
Years

Introduction to Assistive Technology

- ▶ Definitions
- ▶ Broad overview
- ▶ What is a disability?
- ▶ Range of disabilities
- ▶ People involved - demographics and numbers
- ▶ Goal of rehabilitation
- ▶ Challenges of people with disabilities
- ▶ Perception of people with disabilities
- ▶ Examples of assistive technology products and devices
- ▶ Phraseology, semantics, and social correctness
- ▶ Last year's student projects

Definitions

- ▶ Disability
- ▶ Assistive Technology
- ▶ Rehabilitation
- ▶ Rehabilitation Engineering

Disability

Work-Based Definition

Persons with a disability are those who have a “health problem or condition which **prevents them from working** or which limits the kind or **amount of work** they can do”.

Current Population Survey
Cornell University Disability Statistics

Disability

Anatomically-Based Definition

The Department of Veterans Affairs uses a **percent disabled** definition partially based upon loss of use of limbs, etc that “interferes with normal life functions”.

Disability

Activity-Based Definition

- ▶ Disability is defined in terms of **limitations in a person's activities** due to a health condition or impairment.
- ▶ **Activities** is a broad enough term to include working, doing housework, taking care of personal and household needs, and other age-appropriate activities.
- ▶ National Health Interview Survey
- ▶ UCSF Disability Statistics Center

WHO says

Disability is an umbrella term covering **impairments**, **activity limitations**, and **participation restrictions**.

- an **impairment** is a problem in body function or structure
- an **activity limitation** is a difficulty encountered by an individual in performing a task or action
- a **participation restriction** is a problem experienced by an individual in involvement in life situations.

WHO says

Disability is not just a health problem.

It is a complex phenomenon, reflecting the interaction between **features of a person's body** and **features of the society** in which he or she lives.

Overcoming the difficulties faced by people with disabilities requires interventions to remove **environmental** and **social barriers**.

WHO says

People with disabilities have the same health needs as non-disabled people - for immunization, cancer screening, etc.

- ▶ They also may experience a **narrower margin of health**, both because of **poverty and social exclusion**, and also because they may be vulnerable to **secondary health conditions**, such as pressure sores or urinary tract infections.
- ▶ Evidence suggests that people with disabilities face **barriers in accessing the specialized health and rehabilitation services** they need in many settings.

Disability ADA Definition

Disability is defined as an individual's **physical or mental impairment** that substantially limits one or more major life activities.

Disability

Opportunity-Based Definition

Disability is defined as any health condition or impairment that prevents an individual from taking full advantage of life's opportunities such as education, vocation, recreation, and activities of daily living

Disability

More Inclusive Definition

Disability is any situation that prevents an individual from taking full advantage of one's **talents** and life's **opportunities** including circumstances such as political system, socio-economic status, etc

Lack of Opportunities

abused, butchered, chained, cremated,
dehumanized, denied the right to vote,
discriminated, disenfranchised, dragged,
embittered life with hard labor, enslaved, evicted,
falsely accused & convicted, forbidden to own
land, forced to live in a ghetto, gassed, ignored,
imprisoned, kidnapped, killed, lynched, murdered,
overlooked, raped, repressed, restrained,
segregated, shackled, shot, starved, sterilized,
targeted, violated

Inclusive Definition of Disability

“Disability is a **normal variation** of the human condition.” -
Gregor Wolbring

61 million adults in the United States live with a disability

Click for
state-specific
information →

26% of adults in
the United States
have some type
of disability
(1 in 4)

The percentage of people
living with disabilities is
highest in the South

Percentage of adults with functional disability types

13.7%

MOBILITY

Serious difficulty walking or climbing stairs

10.8%

COGNITION

Serious difficulty concentrating, remembering, or making decisions

6.8%

INDEPENDENT LIVING

Difficulty doing errands alone

5.9%

HEARING

Deafness or serious difficulty hearing

4.6%

VISION

Blindness or serious difficulty seeing

3.7%

SELF-CARE

Difficulty dressing or bathing

Disability is especially common in these groups:

2 in **5**

adults age 65
years and older
have a disability

1 in **4**

women have
a disability

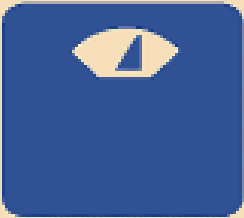

2 in **5**

Non-Hispanic
American Indians/
Alaska Natives
have a disability

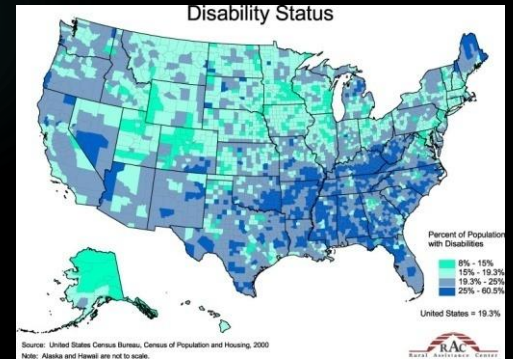

Adults living with disabilities are more likely to

		With Disabilities	Without Disabilities
	HAVE OBESITY	38.2%	26.2%
	SMOKE	28.2%	13.4%
	HAVE HEART DISEASE	11.5%	3.8%
	HAVE DIABETES	16.3%	7.2%

Disability in the US

- ▶ 71.4 million citizens have activity limitations ~ 23% of 308 million
 - ▶ Reports cite 32 to 78 million (over 1 billion globally - 15%)
- ▶ 24.1 million individuals have a severe disability
- ▶ 11 million children have a disability
- ▶ 25% of health care costs relate to disability
- ▶ Disability is the largest minority group
- ▶ > 22 million are 65 or older
- ▶ 10 million people with vision impairments
 - ▶ 1.3 million are legally blind (37 million blind globally)
- ▶ 24 million people with hearing impairments
 - ▶ 2 million are deaf
- ▶ > 1 million wheelchair users
- ▶ 6 million people have developmental disabilities
- ▶ Less than 5% are born with their disability
- ▶ **> 12% (3000) of Stanford students are registered with OAE**

Disability in the US

▶ **Disability rates vary** by age, gender, race, ethnicity, state of residence, and economic status

▶ Disabilities may result in a **reduced chance for education and employment**

▶ Disability is associated with **differences in income** - 27.8% working-age individuals with disability live in poverty

▶ As the **nation ages**, the number of people experiencing limitations will certainly **increase**.

▶ Disability is a **normal variation** of the human condition.

Disability Types

Which disabilities are most obvious?

- ▶ Congenital / acquired
- ▶ Physical
 - ▶ Sensory
 - ▶ Functional
- ▶ Psychological / neurological

Age-related Disabilities

- ▶ Macular Degeneration
- ▶ Sarcopenia
- ▶ Cognitive Decline
- ▶ Commercial Pilot Restrictions
- ▶ Driving Restrictions
- ▶ Presidential Age

Desires of People with Disabilities

- ▶ Regain wellness & function
- ▶ Perform tasks independently
- ▶ Improve quality of life
- ▶ Take full advantage of all opportunities
 - ▶ Educational
 - ▶ Vocational
 - ▶ Recreational
 - ▶ Activities of daily living
- ▶ Pursue happiness
- ▶ Freedom to integrate into society (or be a part of their own group or be an individual)

Perceptions of Disabilities

- ▶ In the US:
 - ▶ A diminishing stigma
 - ▶ Mainstreaming
 - ▶ ADA
- ▶ In other countries:
 - ▶ Taken care of, but often hidden away
 - ▶ Pursuit of a technology solution is a priority

A Positive View

Identify a large group of individuals who spend
12 to 25 years in institutions before they can
contribute significantly to society

Identify a large group of individuals who spend 12 to 25 years in institutions before they can contribute significantly to society

Students!

- Job
- Physical**
- Benefit society
- Legacy
- Retirement
- Death

Social and Political Correctness

▶ Put the person rather than the condition first:

▶ Individuals or people with a disability

▶ Focus on capabilities rather than disabilities:

▶ Wheelchair user

▶ Refer to the person rather than the disability group - **be inclusive:**

▶ **NOT:** The Blind (?), the Disabled, the Deaf

UK - The People & The Royals
US - The People & The Celebrities (?)

Exclusive

The
People

The
Disabled

Inclusive

US Constitution

People

**People with
disabilities**

People First

What is your secondary attribute?

People-first language aims to avoid perceived and subconscious dehumanization when discussing people with disabilities, as such forming an aspect of disability etiquette.

The basic idea is to impose a sentence structure that **names the person first and the condition second**, ie “people with disabilities” rather than “disabled people”, in order to emphasize that **“they are people first”**. Because English syntax normally places adjectives before nouns, it becomes necessary to insert relative clauses, replacing, eg, “asthmatic person” with “a person who has asthma”.

The speaker is thus expected to internalize the idea of a **disability as a secondary attribute**, not a characteristic of a person's identity. Critics of this rationale point out that the unnatural sentence structure draws even more attention to the disability than using unmarked English syntax, producing an additional “focus on disability in an ungainly new way”.

Wikipedia

Social and Political Correctness

- ▶ Shorthand terms:

- ▶ Para, Quad

- ▶ Derogatory terms:

- ▶ Gimp, Crip, Spaz, Retard

- ▶ Use of terms:

- ▶ “Patient”, “User”, “Subject”, “Consumer”

- ▶ “**Suffering** from”, “Afflicted with”, “Confined to”, “Victim of”

- ▶ “Diagnosed with”, “Living with”, “Survivor of”, “Recovering from”

- ▶ “Inspiring” - lack of expectation

- ▶ “Lost battle with ... “

Medical & Common Use

- ▶ Crippled, Retarded, Deaf & Dumb, Lame
- ▶ Mute, Moron, Imbecile, Idiot, Spastic
- ▶ Persistent vegetative state

New Inductees - 2022

Elon Musk - Asperger's Syndrome

"I'm actually making history tonight as the first person with Asperger's to host 'SNL'. Or at least the first to admit it. So I won't make a lot of eye contact with the cast tonight. But don't worry, I'm pretty good at running 'human' in emulation mode."

Greta Thunberg - Asperger's syndrome, OCD

"I was diagnosed with Asperger's syndrome, OCD, and selective mutism. That basically means I only speak when I think it's necessary. Now is one of those moments."

New Inductees - 2022

Jesse Jackson - Parkinson's Disease

Amanda Grayson, Spock's Mother - Human

In a Star Trek movie, a group of Vulcan administrators called Spock "disadvantaged" as he had a human mother.

New Inductees - 2022

Selma Blair - living with Multiple Sclerosis

Jacques-Yves Cousteau - paralysis on his right side
If it weren't for a severe car accident that left him paralyzed on much of his right side, Jacques-Yves Cousteau would not have been swimming incessantly off southern France to recuperate.

New Inductees - 2022

Gavin Newsome - Dyslexia

Maya - Little person on The Simpsons

Maya is a beautiful woman whom Moe met over the Internet. She's a little person, standing at about three feet tall. Moe talked of arranging to have a risky height-reduction surgery to literally "knock himself down to her size", but she convinced him not to. She then left Moe because she was put off by his willingness to try something so crazy, and also because she wanted to be with a man who was truly comfortable with her size. Moe's seeking the surgery, therefore, showed Maya that he wasn't the right man for her.

New Inductees - 2022

Josh Miele - Vision Impairment - 2021 MacArthur Fellow

Joshua Miele is a blind adaptive technology designer developing devices to enable blind and visually impaired (BVI) people to use technologies that pervade our lives. Miele's graduate work focused on psychoacoustics (the science of sound perception) and directional aspects of hearing. More recently, he is creating effective and affordable solutions to everyday problems blind people face, particularly access to digital information.

Device Definition of Assistive Technology

The Technology Related Assistance Act of 1988 (P.L. 101-407) and the Assistive Technology Act of 1998 (P.L. 105-394) provide a standard definition of assistive technology as “any item, piece of equipment, or product, whether acquired commercially, modified, or customized, that is used to increase, maintain, or improve the functional capabilities of individuals with disabilities.”

South Carolina Assistive Technology Program - [link](#)

My Definition of Assistive Technology

- ▶ Assistive Technology (AT) is a generic term that includes:
 - ▶ Devices, services, and policies that benefit people with disabilities
 - ▶ Institutions and facilities where the work takes place
 - ▶ The process that makes them available to people with disabilities.
- ▶ An AT device is one that has a diagnostic, functional, adaptive, or rehabilitative benefit.
- ▶ An AT service provides various resources.
- ▶ AT policies, laws, and legislation that mandates the provision of devices and services
- ▶ Engineers employ an AT process to specify, design, develop, test, and bring to market new devices.

Assistive Technology

AT devices provide greater independence, increased opportunities for participation, and an improved quality of life for people with disabilities by enabling them to perform tasks that they were formerly unable to accomplish (or had great difficulty accomplishing or required assistance) through enhanced or alternate methods of interacting with the world around them.

Assistive Technology

Devices provide greater independence, increased opportunities for participation, and an improved quality of life for everyone by enabling us to perform tasks that we were formerly unable to accomplish (or had great difficulty accomplishing or required assistance) through enhanced or alternate methods of interacting with the world around us.

Assistive Technology

New AT devices incorporating novel designs and emerging technologies have the potential to further improve the lives of people with disabilities.

- ▶ Computers, IoT
- ▶ Robotics & Mechatronics
- ▶ Nanotechnology
- ▶ Medical technologies
- ▶ Wearable devices

Assistive Technology

New devices incorporating novel designs and emerging technologies have the potential to further improve the lives of everyone.

- ▶ Computers, IoT
- ▶ Robotics & Mechatronics
- ▶ Nanotechnology
- ▶ Medical technologies
- ▶ Wearable devices

This leads me to conclude that:

Everything is Assistive Technology!

- ▶ Technology
- ▶ Transportation
- ▶ Institutions
- ▶ Organized government
- ▶ Networks: TV, Radio, Internet, Highway, Electricity, News, Gas, Food, Commerce, Money, Entertainment, Sports, Computers

The universe seems neither benign nor hostile, merely indifferent to the concerns of such **puny creatures** as we are.
Carl Sagan

Assistive Technology Workers

Health care professionals (not just engineers) are involved in evaluating the need for AT devices; working on research, design, and development teams; prescribing, fitting, and supplying them; and assessing their benefit.

- ▶ Physicians
- ▶ Clinicians
- ▶ Therapists
- ▶ Suppliers
- ▶ Policy makers
- ▶ Educators
- ▶ Caregivers

Rehabilitation

- ▶ Medical model: Restoration of function caused by disability - through surgery, medication, therapy, and/or retraining
- ▶ More inclusive model: Includes Assistive Technology

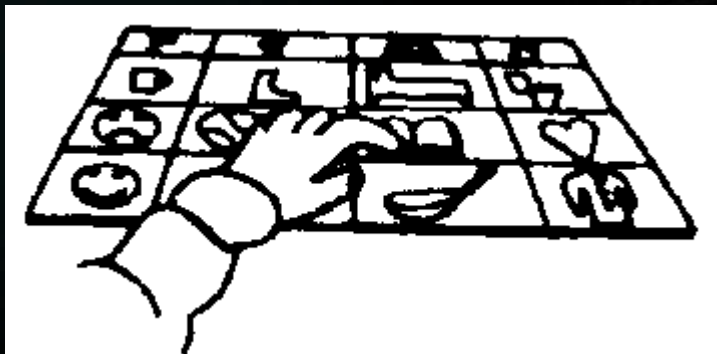

Goals

- ▶ Goal of Rehabilitation
 - ▶ Restore function and wellness

- ▶ Goals of Assistive Technology
 - ▶ Increase independence
 - ▶ Improve quality of life

Scientific Definition of Rehabilitation Engineering

Rehabilitation Engineering may be defined as a **total approach to rehabilitation that combines medicine, engineering, and related sciences to improve the quality of life of persons with disabilities.**

How and when did the rehabilitation engineering center program come into being? - James R. Reswick, ScD, DE - NIDRR - [link](#)

Rehabilitation Engineering

Rehab Engineers assist people who have a functional impairment by engaging in one or more of these activities:

- ▶ Device Design
- ▶ Research & Development
- ▶ Technology Transfer
- ▶ Marketing
- ▶ Provision
- ▶ Education & Training

Facets of Rehabilitation Engineering

- ▶ Personal Transportation (vehicles and assistive driving)
- ▶ Augmentative & Alternative Communication
- ▶ Dysphagia: Eating, Swallowing, Saliva Control
- ▶ Quantitative Assessment
- ▶ Technology Transfer
- ▶ Sensory Loss & Technology
- ▶ Wheeled Mobility & Seating
- ▶ Electrical Stimulation
- ▶ Computer Applications
- ▶ Rural Rehabilitation
- ▶ Assistive Robotics & Mechatronics
- ▶ Job Accommodation
- ▶ Gerontology - Technology for Successful Aging
- ▶ International Appropriate Technology
- ▶ Universal Access

Rehabilitation Technology

The term rehabilitation technology refers to the systematic application of technologies, engineering methodologies, or scientific principles to meet the needs of and address the barriers confronted by individuals with disabilities in areas which include education, rehabilitation, employment, transportation, independent living, and recreation. The term includes rehabilitation engineering, assistive technology devices, and assistive technology services.

Rehab Act

Assistive Technology Market

- ▶ Many people with a disability - in US and world-wide (over 1 billion)
- ▶ Largest **non**-homogeneous group in the US is wheelchair users (several million)
- ▶ **Every consumer has a unique personality, challenges, circumstances, goals, and aesthetic preferences**
- ▶ **The lack of a well-defined mass market means that companies serving individuals with disabilities and older adults are small and their products are expensive**

Universal Design

Universal design (often called **inclusive design**) refers to a **design strategy** meant to produce buildings, products, and environments (shared resources) that are inherently accessible to the greatest number of individuals including older adults, people without disabilities, and people with disabilities.

The term "universal design" was coined by the architect Ronald L. Mace to describe the concept of designing all products and the built environment to be aesthetic and usable to the greatest extent possible by everyone, regardless of their age, ability, or status in life.

Example Assistive Technology Devices

- ▶ Projects I worked on at the VA RR&D Center
- ▶ Commercial devices and research projects
- ▶ Technologies that have made an impact

Head Control Interface

- Features

- 2 degrees of freedom
- real-time operation
- non-contact interface
- front or rear sensing
- mouse or joystick substitute

- Applications

- control of mobility (electric wheelchair) contrast with voice control alternative
- control of cursor position with hands on keyboard
- demonstrated robot control

Head Control Interface Video

[YouTube link](#)

Ralph Fingerspelling Hand

- ▶ Ralph offers individuals who are deaf-blind improved access to computers and communication devices in addition to person-to-person conversations.
- ▶ Enhancements of this design include better intelligibility, smaller size, and the ability to optimize hand positions.

Ralph Video

[YouTube link](#)

Driving Simulator

- The goal of this project was to evaluate the potential of a high-quality computer-based driving simulator to accurately assess and improve the driving ability of veterans with Stroke and Traumatic Brain Injury (TBI).
- Create realistic driving scenarios to address specific cognitive, visual, and motor deficits in a safe setting
- Compare driving performance with traditional “behind-the-wheel” assessment and training

DriveSafety Model 550C 3-Channel Simulator with Saturn car cab.

Mind-controlled Limbs

Humans can now move robotic limbs using only their thoughts and, in some cases, even get sensory feedback from their robotic hands. [60 Minutes](#)

3D Printing

“Officially launched in January 2012, Robohand creates **affordable mechanical prosthetics** through the use of 3D printers. Not only that, but it has made its designs open source, so that anyone with access to such printers can print out fingers, hands, and now arms as well.”

Project Daniel

“A company called **Not Impossible Labs** has come up with one of the best uses for 3D printer technology we've ever heard of: **printing low-cost prosthetic arms** for people, mainly children, who have lost limbs in the war-torn country of Sudan.”

Cyborg Beast

“Jeremy Simon from 3D Universe was able to create a **3D-printed hand** that he calls the Cyborg Beast. It's a completely mechanical device made from ABS plastic with a series of flexible cords that allow it to act like a real hand. It turned out so well that the patient says he prefers it for day-to-day use.”

Robot Bed / Wheelchair

“A bed that transforms directly into a wheelchair. The mattress is split in half, with one side remaining firmly in place when the other half is separated to form the body of the chair. A patient simply needs to move over a few inches to one side, and with a few adjustments they'll be sitting upright in a powered wheelchair. A single caregiver assists during the transformation process, significantly reducing the burden on staff.”

Panasonic

Google Glass

Tammie Lou Van Sant of Santa Cruz is a quadriplegic. She has wanted to take pictures for years and now is able to do it independently using Google Glass - with a nod, swipe, or verbal command.

"I am a New Yorker, a law student, a **quadriplegic**. With Google Glass I could finally capture my life on my own. I would show the world how to thrive with physical limitations in the most interesting city on the planet. With Glass, paralysis doesn't have to be paralyzing." Alex Blaszcuk

Designs for People with Dementia

“A re-thinking of a table setting specifically tailored to help those with cognitive impairment eat without assistance.” Sha Yao

Winner of Stanford Center on Longevity First Design Challenge

Bionic Pets

“Sometimes individual animals need our help. Left disabled without fins, flippers, beaks, or tails because of disease, accidents, or even human cruelty, these unfortunate creatures need what amounts to a miracle if they are to survive. Luckily for them, sometimes miracles do happen. Amazing prosthetics made possible by the latest engineering and technology are able to provide just what they need, and scientists are finding that innovations created in the process are **benefiting both animals and humans.**”

Steampunk Wheelchair

“Help us construct a retro-futuristic Steampunk Wheelchair for a 14 year-old boy with Muscular Dystrophy. We want to modify a wheelchair to take it from ‘functional’ to ‘awesome’ to will help him gain confidence in his interactions by changing the focus of the conversation and **expressing his uniqueness and individuality through his mobility device.**”

Essential Tremor

“A motion sensor and a tiny computer in Liftware’s rechargeable base work together to analyze movement frequencies and distinguish unintentional tremor from intentional movements like bringing the spoon to your mouth. Based on that feedback, the utensil attachment **compensates for the involuntary motion**; if the tremor sends the base stabilizer to the left, the spoon head will adjust to the right.”

iBot Wheelchair

- ▶ The **Balance Function** elevates the user to move around at eye level and to reach high places independently. In this function, the front wheels rotate up and over the back wheels, while the user remains seated at an elevated position.
- ▶ The **Stair Function** enables the user to safely climb up and down stairs, with or without assistance, giving them access to previously inaccessible places.
- ▶ The **4-Wheel Function** enables the user to climb curbs as high as five inches and to travel over a variety of uneven terrain, such as sand, gravel, grass, thick carpet and other surfaces.

Two Credit Unit Student Projects

- ▶ Forty-three students enrolled
- ▶ Romania, Greece, Italy, Netherlands, Taiwan
- ▶ Ten-week course conducted online via Zoom
- ▶ Teams of one, two, or three students
- ▶ Fabrication projects addressed challenges experienced by people with disabilities and older adults in the “local” community
- ▶ Teams shared “Understanding the Problem”, but fabricated individual solutions
- ▶ Presentations and reports

Abby's Camping Cot

Explore designs for a camping cot that Abby will find to be easy to assemble and disassemble independently.

Abby's Super Pooper Scooper

Explore designs for a device that will allow Abby to effectively clean up after her service dog while remaining active in the community.

Abby's Vegetable Cutter

Explore designs for cutting boards for cooks like Abby with limited arm/hand mobility.

Innovative and Inclusive Playground Structures

Explore designs to create new play and educational experiences.

Vision Therapy Device

Explore designs for a device to facilitate vision therapy in children.

Kitchen Knives for Austin

Explore designs that would enable Austin to independently perform food preparation activities.

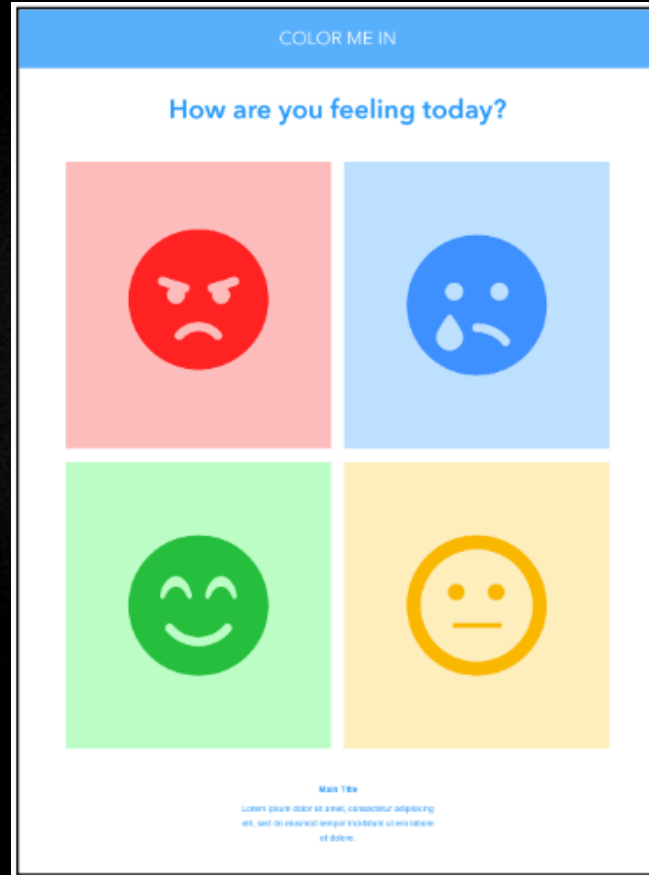

One-Handed Trumpeteering

Explore designs that would enable a one-handed musician to hold and play a trumpet.

Communication Methods at Children's National Hospital

Explore designs for ways that clinicians can get updated on patients' daily emotional state.

Storage Solution for Daniel

Explore designs for a wearable storage pack that would enable Danny to independently and safely store his phone, wheelchair gloves, and

Storage Solution for Great Grandmother's Walker

Explore designs for a storage addition to a walker.

Tilly's Phone Holder

"I am looking for a design of a phone holder for my electric wheelchair that allows it to sit safely near my lap within reach of my right hand, and ideally the attachment will hold the phone securely yet allow me to take it in and out independently with my very limited strength."

Non-fabrication Report Projects

Candidate Student Projects

- ▶ Solicited from community
- ▶ Suggested by Dave
- ▶ Student-defined projects

Project Offerings

This year's candidate projects:

- ▶ Projects with Abby, Olenka, Austin, Danny & Stanford, CNH
- ▶ Report on an advance in assistive technology
- ▶ Report on a disability-related topic
- ▶ Report on a local disability or aging organization
- ▶ Pursue a paper or CAD design
- ▶ Pursue an “appearance model”
- ▶ Create a work of art
- ▶ Engage in an aftermarket aesthetic design
- ▶ Engage in an aftermarket functionality / usability design
- ▶ Student-defined projects
- ▶ Other projects

Project Pitches & Team Formation

Dave's suggested projects:

- ▶ Creative Expression
- ▶ Designing Your Afterlife
- ▶ COVID-related Projects
- ▶ Tactile Art

Student Project Resource People

- ▶ Debbie Kenney - Occupational Therapist
- ▶ Doug Schwandt - Mechanical Engineer Consultant
- ▶ Gary M. Berke - Director of Prosthetics
- ▶ Jules Sherman - Designer & Entrepreneur
- ▶ Matteo Zallio - Fulbright Scholar

Other Involved People

- ▶ Project suggestors
- ▶ Individuals with disabilities
- ▶ Community members attending lectures

THE EXECUTIVE SUMMARY

- ▶ Flexible course focusing on **building confidence and enhancing professional skills**
- ▶ Lectures, projects, virtual field trips, virtual assistive technology faire, mid-term & final presentations and reports, project demonstration
- ▶ Opportunities for in-class participation and reflection
- ▶ Lots of assistive technology products, research, student projects, and remaining challenges
- ▶ Assistive technology benefits everyone
- ▶ **Everything is assistive technology!**
