

**ME 106/227 – Vehicle Dynamics and Control
Spring Quarter 2002
Student Information and Questionnaire**

Please return at end of class or to Terman 527 by 5pm on Tuesday, April 2

Your Name: _____

Preferred Name: _____

Your email address: _____

Graduate/Undergraduate: _____ Year: _____

Department/Division: _____

Truth in Advertising Disclosures:

By turning in a questionnaire, you are acknowledging the following:

- (1) This class will require extensive use of MATLAB for the assignments and the expectation is that students either are familiar with this software or willing to learn it for this class without grousing at the teaching team (though asking for help is fine).
- (2) The lab section is mandatory this year and students must show up for the assigned lab time on Saturday. This may require getting up very early in the morning.

Courses that you have taken in dynamics, dynamic systems or control (Stanford course numbers or course titles from other Universities):

What one thing would you like to learn during the quarter? (More than one is also OK)

Please complete the reverse side.

What is one personal experience that you have had with vehicle dynamics (through work, as a hobby, in student projects, on an empty stretch of country road...)?

Please describe your motivation for taking this course and what you believe you could add to the class. This is important to fill out since the class is limited enrollment.
