<i>Preface</i>	v
<i>Composites Design Tutorial 1 and 2</i>	viii
<i>Who We Are</i>	x
<i>Nomenclature</i>	xvii

## **1 Distribution of Micro Stresses and Interfacial Traction in Unidirectional Composites**

1.1	INTRODUCTION	1-1
1.2	THEORETICAL BASIS	1-2
1.2.1	<i>Idealized Micromechanical model</i>	1-3
1.2.2	<i>Strain Amplification Factors</i>	1-5
1.2.3	<i>Analytical Methods for Macro Material Properties</i>	1-10
1.3	NUMERICAL ANALYSIS	1-11
1.4	RESULTS AND DISCUSSION	1-13
1.4.1	<i>Verification of Boundary Conditions</i>	1-13
1.4.2	<i>Effective Material Properties</i>	1-14
1.4.3	<i>Micro Stress Distribution in Unit Cell</i>	1-17
1.4.4	<i>Micro Stress Invariant Distribution in Matrix</i>	1-19
1.4.5	<i>Interfacial Traction Distribution along Fiber Circumference</i>	1-23
1.4.6	<i>Effect of Different Interfacial Stiffness on Stress Distribution</i>	1-25
1.5	CONCLUSION	1-28

## **2 Effects of Fiber Arrangement on Mechanical Behavior of Unidirectional Composites**

2.1	INTRODUCTION	2-1
2.2	METHOD	2-4
2.2.1	<i>Generation of Random Fiber Array</i>	2-4
2.2.2	<i>Real Fiber Array</i>	2-5
2.2.3	<i>Finite Element Model</i>	2-6
2.3	RESULTS AND DISCUSSION	2-8
2.3.1	<i>Random Fiber Array</i>	2-8
2.3.2	<i>Comparison between Random and Real Array</i>	2-9
2.3.3	<i>Effective Material Properties</i>	2-11
2.3.4	<i>Distribution of Stress Invariants</i>	2-13

2.3.5	<i>Maximum Interfacial Normal Traction in Random and Regular Arrays</i>	2-13
2.3.6	<i>Effect of Loading Angle for Random and Regular Arrays</i>	2-15
2.3.7	<i>Interfacial Traction Distribution</i>	2-21
2.3.8	<i>Comparison between Transverse Strength and Interfacial Traction Distribution</i>	2-23
2.4	<b>DISCUSSION AND CONCLUSION</b>	2-24

### **3 Micro-Mechanics of Failure (MMF) for Continuous Fiber Reinforced Composites**

3.1	<b>INTRODUCTION</b>	3-1
3.2	<b>MICRO-MECHANICS OF FAILURE (MMF)</b>	3-4
3.2.1	<i>Micro Stresses Calculated from Macro Stresses</i>	3-4
3.2.2	<i>Fiber Failure Criterion</i>	3-5
3.2.3	<i>Matrix Failure Criterion</i>	3-7
3.2.4	<i>Fiber-Matrix Interface Failure Criterion</i>	3-9
3.3	<b>RESULTS AND DISCUSSION</b>	3-10
3.3.1	<i>Determination of Constituent Strengths in Graphite/ Epoxy</i>	3-12
3.3.2	<i>Determination of Constituent Strengths in Glass/Epoxy</i>	3-16
3.3.3	<i>Determination of Constituent Strengths through Off-Axis Ply Strength</i>	3-19
3.3.4	<i>Failure Envelopes of Multidirectional Laminates Predicted by MMF</i>	3-22
3.4	<b>DISCUSSION AND CONCLUSION</b>	3-25

### **4 Formulation of Long-Term Creep and Fatigue Strengths Based on ATM**

4.1	<b>INTRODUCTION</b>	4-1
4.2	<b>ACCELERATED TESTING METHODOLOGY</b>	4-2
4.2.1	<i>Procedure of ATM</i>	4-2
4.2.2	<i>Applicability of ATM</i>	4-4
4.2.3	<i>Theoretical Verification of TTSP</i>	4-5
4.3	<b>PROCEDURE FOR FORMULATING MASTER CURVES OF CREEP AND FATIGUE STRENGTHS</b>	4-7
4.3.1	<i>Master Curve of Creep Compliance of Matrix Resin</i>	4-7
4.3.2	<i>Master Curve of Creep Strength of Polymer Composites</i>	4-9
4.3.3	<i>Master Curve of fatigue Strength of Polymer Composites</i>	4-11
4.4	<b>MASTER CURVES OF CREEP AND FATIGUE STRENGTHS</b>	

FOR UNIDIRECTIONAL CFRP LAMINATES	4-13
4.4.1 <i>Master Curve of Storage Modulus of Matrix Resin</i>	4-14
4.4.2 <i>Matrix Curves of Creep Strength for CFRP Laminates</i>	4-16
4.4.3 <i>Master Curves of Fatigue Strength of CFRP Laminates</i>	4-18
4.5 MASTER CURVES OF CREEP AND FATIGUE STRENGTHS FOR MMF/ ATM ANALYSIS	4-21
4.6 CONCLUSIONS	4-24

## **5 Progressive Failure Analysis of Composites**

5.1 INTRODUCTION	5-2
5.2 CURRENT STRATEGIES IN PROGRESSIVE FAILURE ANALYSIS	5-4
5.3 PROGRESSIVE FAILURE ANALYSIS BY THE ELEMENT-FAILURE METHOD (EFM)	5-16
5.3.1 <i>Concept of the EFM</i>	5-17
5.3.2 <i>Implementation of the EFM</i>	5-20
5.3.3 <i>Plate with a Crack-Like Slit Under Remote Tension</i>	5-25
5.3.4 <i>Contact of Pin-Loaded Holes</i>	5-27
5.3.5 <i>Contact in Delaminations</i>	5-30
5.3.6 <i>Progressive Failure Analysis of Pin-Loaded Composite Joints</i>	5-34
5.4 CONCLUSION	5-43
APPENDIX FOR CHAPTER 5	5-55

## **6 MAE: An Integrated Design Tool for Failure and Life Prediction of Composites**

6.1 INTRODUCTION	6-1
6.1.1 <i>Micromechanics of Failure(MMF)</i>	6-3
6.1.2 <i>Accelerated Testing Method (ATM)</i>	6-4
6.1.3 <i>Evolution of Damage (EOD)</i>	6-5
6.1.4 <i>Integration of MMF and ATM</i>	6-5
6.1.5 <i>Integration of MMF and EOD</i>	6-6
6.1.6 <i>Integration of MMF, ATM and EOD</i>	6-7
6.2 IMPLEMENTATION METHODS FOR STRENGTH AND LIFE PREDICTION	6-7
6.3 EXAMPLE CASES	6-13
6.3.1 <i>Reproduction of Creep Strength Master Curves</i>	6-14
6.3.2 <i>Open-Hole Tension under Creep Loading</i>	6-15
6.3.3 <i>MAE versus Simple Methods</i>	6-16
6.3.4 <i>Effects of Loading Sequence</i>	6-18

6.3.5	<i>Double-Edge Notched Specimen under Tensile Creep Loading</i>	6-20
6.4	SUMMARY AND CONCLUSIONS	6-21
	APPENDIX FOR CHAPTER 6	6-26

## **7 Life Prediction of Composites using MMF and ATM**

7.1	INTRODUCTION	7-1
7.2	LIFE PREDICTION PROCEDURE OF COMPOSITES	7-2
7.3	RESULTS: CREEP AND FATIGUE MASTER CURVES FOR TR30S/EPOXY	7-7
7.4	A STANDARD CREEP MASTER CURVE FOR THE MATRIX	7-13
7.5	DISCUSSION AND CONCLUSION	7-15

## **8 Happy 40<sup>th</sup> Anniversary**

### **INDICES**

AUTHOR INDEX	I-1
SUBJECT INDEX	I-4

### **APPENDICES**

A	THEORY OF COMPOSITES DESIGN	A-1
B	MATERIALS AND PROCESSING	B-1
C	MIC-MAC	C-1
D	MIC-MAC/ FEA	D-1
E	GENLAM: GENERAL LAMINATE	E-1
F	SUPER MIC-MAC PLUS (SMM+): UPDATES & SAMPLE CASES	F-1
