PalmSource Powered Up Awards announced

 By: **Larry Garfield**, Monday 30th September 2002, 18:14 GMT

The winners of PalmSource's Powered Up Awards have been announced, including major industry applications and independent developers, from medial software to add-on hardware modules.

As part of its grand opening of its new independent headquarters building last week, PalmSource announced the winners of its Powered Up Awards contest. The awards went to one winner in each of four categories for the most innovative applications in their area.

Best Enterprise Solution and Best Overall Solution went to **ePocrates Rx** from **ePocrates**, which provides extensive medical information to physicians on the floor, including drug information and dosing. ePocrates is already used by over half a million medical professionals and medical students.

Best Productivity/Education Solution went to **MARGI Systems** for their **Presenter-To-Go** SD card. The hardware/software combo device allows users to put PowerPoint presentations as well as other printable documents onto their SDIO slot-equipped Palm device and output it to any VGA-capable [monitor](#) or LCD projector at full 1024x768 resolution.

Best Leisure and Entertainment Solution went to **Vindigo 2.0** from Vindigo, an AvantGo-like service that provides users with up-to-date information on entertainment events in their area. Coverage includes concerts, restaurants, stores, bars and clubs, museum events, and so on, and provides maps and directions to various locations, including the location of ATM machines.

Best Student Developer Solution was awarded to high school student An Nguyen for Palm CWebLog. Palm CWebLog is a tracking program for the Liaison Committee on Medical Education (LCME), the primary American and Canadian accrediting authority for medical education programs ending in M.D. degrees. LCME requires that medical students keep a record of their clerkship experiences. Students currently use the online Clinical WebLog to log these experiences. Palm CWebLog allows students to record their information immediately and upload later rather than waiting until they can get to the Clinical WebLog [web](#) site.

PalmSource is sponsoring another round of awards as well, to be awarded at the PalmSource 2003 conference. They are now accepting **nominations** on their web site.

Shadowgate Classic

An innovative adventure game in the Palm OS of your hand; selling at only \$14.99 US.

Pocket Tunes

Turn your Palm OS 5 device into a portable audio player! Play MP3, Ogg Vorbis or WAV files.

AeroPlayer

AeroPlayer turns your Palm Powered handheld into a portable music player by playing digital audio files stored on an expansion card.

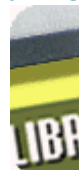

Chapura KeySuite

KeySuite goes beyond the built-in handheld applications for personal information management and is the convenient companion to Microsoft Outlook for your Palm Powered handheld.
