

AA200 Applied Aerodynamics

Table of Contents

Chapter 1 - Introduction to fluid flow

- 1.1 Introduction 1
- 1.2 Conservation of mass 1
- 1.3 Particle paths, streamlines and streaklines in 2-D steady flow 5
- 1.4 Particle paths in three dimensions 18
- 1.5 The substantial derivative 18
- 1.6 Momentum transport due to convection 21
- 1.7 Momentum transport due to molecular motion at microscopic scales 26
- 1.8 Conservation of energy 33
- 1.9 Summary - the equations of motion 38
- 1.10 Problems 39

Chapter 2 – Dimensional analysis

- 2.1 Introduction 1
- 2.2 The two-body problem in a gravitational field 2
- 2.3 The drag of a sphere 6
- 2.4 The drag of a sphere in high speed gas flow 13
- 2.5 Dimensionless equations of motion 17
- 2.6 Buckingham's Pi theorem – the dimensional analysis algorithm 22
- 2.7 Concluding remarks 23
- 2.8 Exercises 24

Chapter 3 - Thermodynamics of dilute gases

- 3.1 Introduction 1
- 3.2 Thermodynamics 1
- 3.3 The Carnot Cycle 5
- 3.4 Enthalpy 9
- 3.5 Heat capacities 12
- 3.6 Ideal gases 13
- 3.7 Constant specific heat 16
- 3.8 The entropy of mixing 18
- 3.9 Isentropic expansion 25
- 3.10 Some results from statistical mechanics 31
- 3.11 Enthalpy - diatomic gases 33
- 3.12 Speed of sound 33
- 3.13 Atmospheric models 34
- 3.14 The third law of thermodynamics 36
- 3.15 Problems 38

Chapter 4 - Control volumes, vector calculus

- 4.1 Control volume definition 1
- 4.2 Vector calculus 2
- 4.3 Gauss' theorem 6
- 4.4 Stokes' theorem 8
- 4.5 Problems 16

Chapter 5 - Kinematics of fluid motion

- 5.1 Elementary flow patterns 1
- 5.2 Rate-of-strain and rate-of-rotation tensors 8
- 5.3 Incompressible flow near a wall 9
- 5.4 Problems 16

Chapter 6 - The conservation equations

- 6.1 Leibniz' rule for differentiation of integrals 1
- 6.2 Conservation of mass 5
- 6.3 Conservation of momentum 6
- 6.4 Conservation of energy 9
- 6.5 Summary - differential form of the equations of motion 11
- 6.6 Integral form of the equations of motion 12
- 6.7 Applications of control volume analysis 15
- 6.8 Stagnation enthalpy, temperature and pressure 21
- 6.9 Symmetries of the incompressible Navier-Stokes equations 29
- 6.10 Problems 34

Chapter 7 - Several forms of the equations of motion

- 7.1 The Navier-Stokes equations 1
- 7.2 The momentum equation in terms of vorticity 2
- 7.3 The momentum equation in terms of the entropy and vorticity 4
- 7.4 Inviscid, irrotational, homentropic flow 6
- 7.5 The velocity potential 8
- 7.6 The vorticity equation 11
- 7.7 Fluid flow in three dimensions, the dual stream function 13
- 7.8 The vector potential 14
- 7.9 Incompressible flow with mass and vorticity sources 16
- 7.10 Turbulent flow 17
- 7.11 Problems 20

Chapter 8 - Entropy generation and transport

- 8.1 Convective form of the Gibbs' equation 1
- 8.2 The kinetic energy equation 1
- 8.3 Internal energy 3
- 8.4 Viscous dissipation of kinetic energy 4
- 8.5 Entropy 5
- 8.6 Problems 8

Chapter 9 - Viscous flow along a wall

- 9.1 The no-slip condition 1
- 9.2 Equations of motion 3
- 9.3 Plane, compressible Couette flow 4
- 9.4 The viscous boundary layer on a wall 12
- 9.5 The Von Karman integral momentum equation 19
- 9.6 The laminar boundary layer in the limit $M \rightarrow 0$ 23
- 9.7 The Falkner Skan boundary layers 28
- 9.8 Thwaites method for approximate calculation of boundary layers 37
- 9.9 Compressible laminar boundary layers 46
- 9.10 Mapping a compressible to an incompressible boundary layer 50
- 9.11 Turbulent boundary layers 63
- 9.12 Transformation between flat plate and curved wall boundary layers 70
- 9.13 Problems 73

Chapter 10 – Elements of potential flow

- 10.1 Incompressible flow 1
- 10.2 Potentials 3
- 10.3 Useful special functions 4
- 10.4 Point source solution of the Poisson equation 5
- 10.5 General solution of the Poisson equation 7
- 10.6 Elementary 2D potential flows 16
- 10.7 Force on a rigid body translating in an inviscid flow 24
- 10.8 Force on a 2-D rigid body 32
- 10.9 Virtual mass 34
- 10.10 Flow due to a force applied to a viscous, incompressible fluid 37
- 10.11 Multi-pole expansion of the Poisson equation in the far field 39

Chapter 11 – Two-dimensional airfoil theory

- 11.1 The creation of circulation about an airfoil 1
- 11.2 The Joukowski airfoil 6
- 11.3 Thin airfoil theory 17

Chapter 12 – Wings of finite span

- 12.1 Flow over a three-dimensional wing 1
- 12.2 Circulation and pressure 5
- 12.3 Forces and moments on a wing 6
- 12.4 Lifting line theory 7
- 12.5 Prandtl's equation of finite wing theory 16
- 12.6 Elliptic lift distribution 18
- 12.7 Drag due to lift of an elliptic wing 23
- 12.8 General wing loadings 26
- 12.9 Forces on a general wing 40
- 12.10 Minimum induced drag wing 43
- 12.11 Induced drag of a rectangular wing 43

- 12.12 Unsteady momentum integral in a Trefftz plane fixed in the fluid 49
- 12.13 Inviscid vortex pair model of the wake 52
- 12.14 Effect of a ground plane on downwash velocity 59

Chapter 13 – Compressible thin airfoil theory

- 13.1 Compressible potential flow 1
- 13.2 Similarity rules for high speed flight 16
- 13.3 The effect of sweep 25
- 13.4 Problems 37

Chapter 14 – Viscous free shear flows

- 14.1 Introduction 1
- 14.2 Reynolds number invariance 3
- 14.3 Group interpretation of Reynolds number invariance 7
- 14.4 Fine scale motions 16
- 14.5 Application –small scales in a turbulent vortex ring 21
- 14.6 Concluding remarks 36
- 14.7 Exercises 36

Appendix 1 - Equations in cylindrical and spherical coordinates

- A1.1 Coordinate systems 1
- A1.2 Transformation of vector components 2
- A1.3 Summary of differential operations 2
- A1.4 Continuity 6
- A1.5 Momentum 7
- A1.6 Energy equation 9
- A1.7 Components of the stress tensor 11
- A1.8 Energy dissipation function 12
