Advanced Rocket Propulsion

Generation of the Propulsive Force

- Conservation of momentum (V_e exhaust velocity for a perfectly expanded nozzle)

$$(M - m) (V + \Delta V) + m (V - V_e) - MV = 0$$

$$(M - \dot{m}\Delta t) (V + \Delta V) + \dot{m}\Delta t (V - V_e) - MV = 0$$

$$M \frac{\Delta V}{\Delta t} = \dot{m} V_e$$

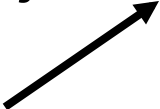

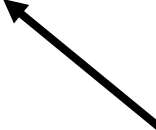

$$\lim_{\Delta t \rightarrow 0} M \dot{V} = \dot{m} V_e$$

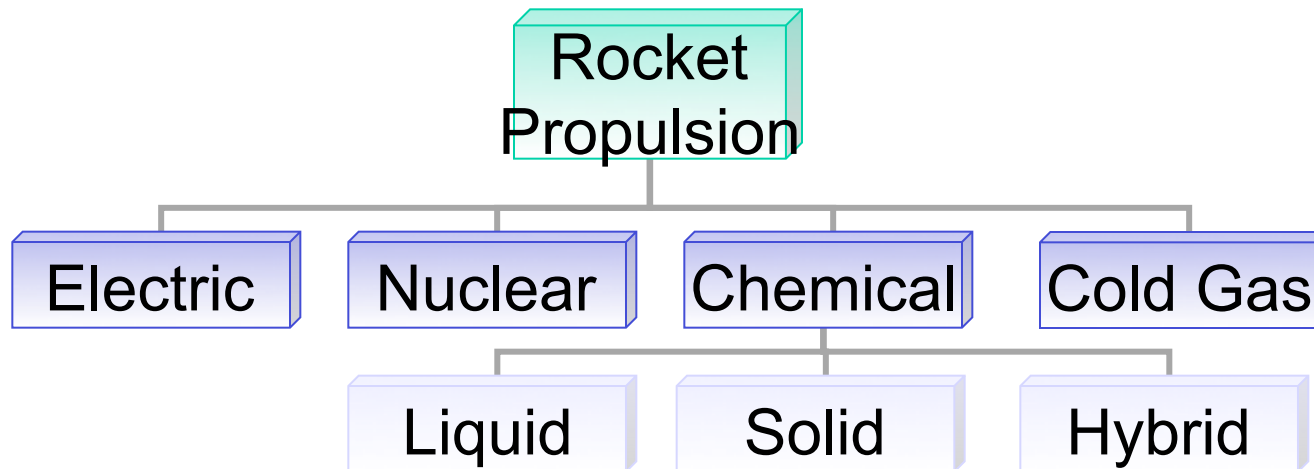

- Thrust Force: $T = \dot{m} V_e$

Advanced Rocket Propulsion

Rocket Propulsion Fundamentals

$$\text{Propulsive Force} = \text{Mass Ejected per Unit Time} \times \text{Effective Exhaust Velocity}$$

Mass  Energy 

Advanced Rocket Propulsion

Liquid Rocket Schematic

Example Systems:

- Shuttle main engines
- Saturn V all stages
- Delta core
- Shuttle OMS

Advanced Rocket Propulsion

Solid Rocket Schematic

Example Systems:

- Shuttle SRM, Ariene V Boosters, Tactical missiles

Advanced Rocket Propulsion

Solid Rocket System

Pegasus solid rocket motor

Advanced Rocket Propulsion

Hybrid Rocket Schematic

Example Systems

- SpaceShipTwo, Target drones, Hobby rockets

Advanced Rocket Propulsion

Hybrid Rocket System

AMROC H1800 Hybrid System

Advanced Rocket Propulsion

Applications of Rocket Propulsion Systems

- Launch vehicles:
 - Core propulsion, Booster, Upper stage propulsion, Separation rockets
- Civilian sub-orbital applications (other than ballistic missiles)
 - Space tourism, rapid delivery
- Space applications
 - Orbit transfer (GTO to GEO transfer)
 - In space propulsion (main propulsion system, planetary landing, orbit insertion)
 - Attitude control systems
- Military applications
 - Ballistic missiles, Tactical weapon systems, Target drones
- Aircraft thrust augmentation
- Sounding rockets
 - Scientific, Educational, Amateur
- Crew escape systems

Advanced Rocket Propulsion

Importance of Rocket Propulsion

- Propulsion system constitutes a large fraction of any launch system in terms of
 - Mass
 - Cost
 - Failures
- Propulsion system is an important part of the vehicle (or satellite) for other applications
- Rocket propulsion is **key**
 - to cost effective reliable access to space
 - to achieve the desired mission in space

Advanced Rocket Propulsion

What Does a Rocket Engineer/Scientist Need to Know ?

- Rocket propulsion is a very interdisciplinary field.
- Some of the important fields are
 - Fluid dynamics/gas dynamics
 - Chemistry, Thermodynamics, Combustion
 - Advanced Physics (Nuclear physics, Electromagnetic theory, Magnetoplasmodynamics, Particle physics)
 - Structures, Material science
 - Thermal protection
 - Flight dynamics, Trajectories
 - Optimization
 - Components (Valves, turbopumps etc)
 - Testing methods, instrumentation
 - Dynamic systems, stability of dynamic systems

Advanced Rocket Propulsion

Rocket Equation

- Equation of motion in vacuum

$$M \frac{dV}{dt} = T = V_e \dot{m} = -V_e \frac{dM}{dt}$$

- Rearrange in the form

$$dV = -V_e \frac{dM}{M} = -I_{sp} g_o \frac{dM}{M}$$

- Integrate to obtain the “Rocket Equation”

$$\Delta V = I_{sp} g_o \ln \left(\frac{M_i}{M_{bo}} \right)$$

- Single stage to orbit calculation

- Assume that for a LEO mission $\Delta V = 7,500 \text{ m/sec}$ $I_{sp} = 350 \text{ sec}$
- The rocket equation yields the mass ratio: $M_i/M_{bo} = 8.88$
- Only **11%** of the vehicle mass is structures/payload

Advanced Rocket Propulsion

History of Rockets-Early History

- Hero of Alexandria
 - Credited for inventing the rocket principle
 - Devised many machines using air pressure, steam, water
 - Earliest machines to use the reaction principle-not certain he understood the principles
- China (Feng Jishen) 970 AD
 - Real inventor of rockets
 - Gunpowder in bamboo tubes, a second stick attached for stability
 - Used in ceremonies
- Early Military Use
 - Kublai Khan 1275 (Japanese invasion)
 - Mongolians and Arabs brought the rocket as west as Spain in 1300's
 - Indians (Tipoo Sultan) used rocket against British in 1770's
 - Used in American War of Independence
 - Rockets were **not** used extensively in WW1

Advanced Rocket Propulsion

History of Rockets- Birth of Modern Rocketry

- Konstantin Tsiolkovsky (1857-1935) Russian
 - Mathematics teacher, published many papers on the principles of rocketry, all theoretical
 - Here are some of his ideas
 - Space travel (1895)
 - Escape velocity
 - Weightlessness
 - Artificial satellites (1895)
 - Derived the rocket equation (1903)
 - Introduced multi stage rockets (1924)
 - He has laid the mathematical foundation of modern space flight
 - Identified exhaust velocity as an important parameter
 - Understood the importance of high temperature and low molecular weight in obtaining high exhaust velocities
 - Identified liquid oxygen and liquid hydrogen as suitable propellants for space travel

Advanced Rocket Propulsion

History of Rockets- Birth of Modern Rocketry

Darya Wuz 1897v.

16... $\frac{v}{v_1} = -\frac{L}{\text{const}} \left\{ 1 + \frac{M_2}{M_1} \right\}$

20... $v_1 = 5200 \text{ mpp.}$

22... M_2 7.22

$\frac{M_2}{M_1}$	$\frac{v}{v_1}$	v
1	0.689	3910
2	1.038	6260
3	1.286	7880
4	1.609	9170
5	1.792	10.100
6	1.946	11.100
7	2.079	11.850

28... $t = \frac{v}{\rho_1}$ 29... $\frac{\rho}{g}$

31... $t = \frac{v_2}{\rho_1}$ 32... $\frac{L}{g}$

34... $v = v_2 \left\{ \frac{\rho}{\rho - g} \right\}$

35... $v_2 = -v_1 \left(1 - \frac{g}{\rho} \right) \left(1 + \frac{M_2}{M_1} \right)$

44... $\rho = \rho - g$

45... $\rho = \frac{\rho - g}{2} t^2$

46... $\rho = \frac{v_2^2}{2(\rho - g)}$

47... $\rho = \frac{v_2^2}{2\rho} \left(1 - \frac{g}{\rho} \right)$

57... $\frac{v}{v_1} = 1 - \frac{L}{\text{const}}$

Konstantin Tsiolkovsky's Rocket Schematic and Calculations

Advanced Rocket Propulsion

History of Rockets- Birth of Modern Rocketry

- Herman Oberth (1894-1992)

German

- His thesis (which was rejected) on rocket propulsion published in 1923
 - Examined using rockets for space travel
 - Designed of a liquid engine using liquid oxygen and alcohol
- His work was also mainly theoretical
- His best seller book generated a huge amateur interest in rocketry in Germany

Advanced Rocket Propulsion

History of Rockets- Birth of Modern Rocketry

- Robert Goddard (1882-1945) American
 - Professor of Physics at Clark University in Massachusetts
 - Published a book "A Method of Reaching Extreme Altitudes"
 - Granted 214 patents on rocket applications
 - Inventions included
 - Gyroscopes for guidance
 - Use of vanes in the plume to steer rocket
 - Use of valve to start and stop
 - Use of liquid oxygen to cool nozzle
 - Use of turbopumps
 - In 1919 published a paper in which he mentioned the possibility of sending a unmanned rocket to the moon. He was ridiculed by the press.
 - Head to New Mexico, continued until 1940.
 - US Government bought his patents for 2 million dollars in 1960.

Advanced Rocket Propulsion

History of Rockets- Birth of Modern Rocketry

- Wernher von Braun (1912-1977) German/American
 - One of the young rocket scientists influenced by Oberth
 - Noticed by the German military in the 1930's, pressured to work for military's interest
 - We was credited as the developer of the A4 (V2) rocket military research station Peenemunde.
 - At the end of WW2
 - Russians took Peenemunde
 - Americans captured Von Braun and his high level technical team.

Advanced Rocket Propulsion

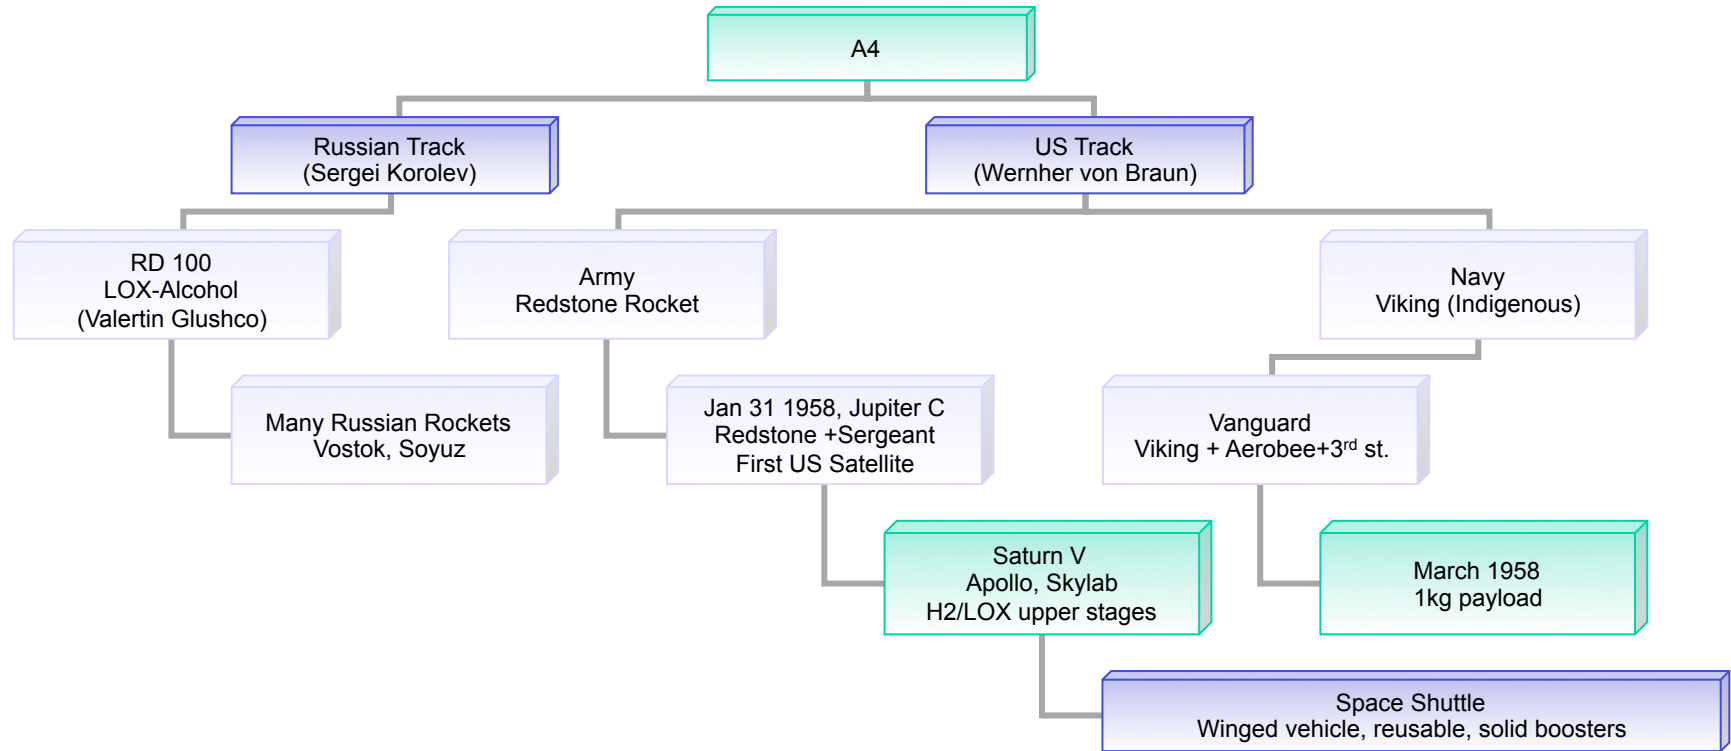

History of Rockets- Birth of Modern Rocketry

Wernher von Braun and his Rockets

Advanced Rocket Propulsion

History of Rockets- Birth of Modern Rocketry

Advanced Rocket Propulsion

History of Rockets- Birth of Modern Rocketry

- For thousands of years rocket technology had
 - Very limited usage (fireworks, limited military weapon)
 - Only propellant gunpowder
- Early in the 20th century pioneers established the foundations of the modern rocket technology
 - Theoretical development
 - Engineering development
 - Development of a vision
- In 1926 Goddard launched the first liquid rocket (apogee: 41 ft)
- In 1942 first successful A4 flight
- In 1950's scaled up/improved A4 liquid engine technology, developed solid rocket technology
- 1960's development of segmented solid rocket technology, development of large LOX-kerosene engines, development of large LOX-H₂ engines
- 1970's Shuttle technologies: staged combustion, long lifetime reusable engines
- 1980-2010's improve the existing technology

“Pragmatism always rests on the efforts of dreamers”

- *Wernher von Braun*
