---

**Appendix E**

**WRITING AND SPELLING**

**I** **A PRONUNCIATION OF WORDS AND NAMES**

The Westron or Common Speech has been entirely translated into English equivalents. All Hobbit names and special words are intended to be pronounced accordingly: for example, *Bolger* has *g* as in *bathe*, and *mathom* rhymes with *fathom*.

In transcribing the ancient scripts I have tried to represent the original sounds (so far as they can be determined) with fair accuracy, and at the same time to produce words and names that do not look uncouth in modern letters. The High-Elven Quenya has been spelt as much like Latin as its sounds allowed. For this reason *c* has been preferred to *k* in both Eldarin languages.

The following points may be observed by those who are interested in such details.

**CONSONANTS**

- **C** has always the value of *k* even before *e* and *i*: *celeb* ‘silver’ should be pronounced as *keleb*.
- **CH** is only used to represent the sound heard in *bach* (in German or Welsh), not that in English *church*. Except at the end of words and before *t* this sound was weakened to *b* in the speech of Gondor, and that change has been recognized in a few names, such as *Rohan*, *Robin*. (*Inarhil* is a Númenorean name.)
- **DH** represents the voiced (soft) *th* of English *these clothes*. It is usually related to *d* as in *S. galadhr* ‘tree’ compared with Q. *atler*, but is sometimes derived from *n + r*, as in *Crandhraz* ‘Redhorn’ from *caran-russ*.
- **F** represents *f*, except at the end of words, where it is used to represent the sound of *v* (as in English *of*): *Nindalf, Fladrif*.

435
How *Tengwar* Are Written

- Each of the main consonants has two parts: a **stem** and a **bow**.
- The stem can be **short**, extend **above** the bow, or extend **below** the bow.
- The bow can be single or **doubled**, face **up** or **down**, and be **open** or **closed**.
- Every main letter is a consonant; vowels are added as small marks (**tehtar**) **above** (or **below**) the letters.
