Examples of Programs Using Random Numbers

Portions of this handout by Eric Roberts

```
/*
 * File: RollDice.java
 * -------------------
 * This program simulates rolling some number of dice until
 * the maximal value on the all the dice is rolled.
 */

import acm.program.*;
import acm.util.*;

public class RollDice extends ConsoleProgram {

   /* Number of sides on each die */
   private static final int NUM_SIDES = 6;

      int numDice = readInt("Number of dice: ");
      int maxRoll = numDice * NUM_SIDES;
      int numRolls = 0;
      do {
         int roll = rollDice(numDice);
         numRolls++;
         println("Rolled " + roll);
      } while (roll != maxRoll);
      println("Rolled " + maxRoll + " after " + numRolls + " rolls");
   }

   /* Returns the total of rolling numDice dice
    *
    * Precondition: The constant NUM_SIDES has a positive value
    *               The parameter numDice is positive
    * Postcondition: A random value is returned, with value
    *                between numDice and NUM_SIDES * numDice
(inclusive)
    */
   private int rollDice(int numDice) {
      int total = 0;
      for (int i = 0; i < numDice; i++) {
         total += rgen.nextInt(1, NUM_SIDES);
      }
      return total;
   }

/* Private instance variables */
   private RandomGenerator rgen = RandomGenerator.getInstance();
}
```

```
/*
 * File: ColorChangingSquare.java
 * ------------------------------
 * This program puts up a square in the center of the window
 * and randomly changes its color every second.
 */

import acm.graphics.*;
import acm.program.*;
import acm.util.*;
