Needfinding

Empathy Map: Mila

Mila

CASUAL WRITER

Creating art can be lonely

Katherine Wang

Averse to social media because the algorithm impedes people's attention spans: many artists feel similarly and avoid social media

Katherine Wang

Substack has too much visibility for me to post

Katherine Wang

Initially was very closed off physically and hesitant/shy

Katherine Wang

Feels that writing is deeply personal (and so sharing feels extremely vulnerable)

Katherine Wang

Needfinding

Empathy Map: Mila

Mila

CASUAL WRITER

Insights

- 1 Wants to **share art** with a community, but **hesitant** about being too open and **sharing with “everyone”**
- 2 **Tech/AI** is a double-edged sword: **averse** to it for its **ethical concerns**, but relies on it for a job

Needfinding Empathy Map: Daisy

Daisy

INDEPENDENT ARTIST

"Out for my dad's birthday and we ordered these desserts that were like these mousses and they were very colorful, very beautiful and i was like i wanted to paint that and i took a picture of that""
Katherine Wang

"Parasocial on ig"
Katherine Wang

"As an English and art major, i'm taking these classes to learn how to create things, i don't want a computer to do things. it just takes away the whole point of doing the work"
Sam Tong

"It is hard to be remember that someone made this and put it out there when you are just scrolling"
Michelle

"Drawing from other's peoples drawings helps about principles of design, like what works and doesn't work"
Michelle

"The fact that a robot is taking your art is kinda insult to injury"
Sam Tong

Being inspired by another painting shows you appreciate sometimes work enough to recreate it
Michelle

"Addictiveness of wanting to get likes and wanting to get follows" can lead to burnout
Sam Tong

"Ebbs and flows of creativity"
Sam Tong

On painting personal objects: it "reminds me of my relationships and celebrating life"
Katherine Wang

Still life paintings are classical and have been done: "A bowl of fruit has been done before, but this tells more of a story"
Katherine Wang

Tries to paint personal objects from her life to make still life more interesting
Katherine Wang

500 followers on Instagram, started freshman year, mix of friends/family and other artists
Katherine Wang

On colorful paintings: "make it fun and engaging and more personal to me"
Katherine Wang

Likes to make cute / cuddly digital art
Katherine Wang

Likes to make still life paintings with bright, cheerful colors
Katherine Wang

Studied art and English at W&M
Katherine Wang

SAY

THINK

Online platforms (IG) are a game: you play by the rules, and you benefit from it.
Sam Tong

Instagram is the most accessible platform, to reach both family and friends, and strangers
Michelle

Recreating art is a form of appreciation
Michelle

While online platforms (IG) are largely beneficial, it is at times tiring, pressuring, and conducive to burnout.
Sam Tong

It is hard to create and maintain deep, meaningful connections online
Michelle

Sees the world's beauty and wants to amplify that through art
Sam Tong

Finds comfort and comradery in online art communities
Sam Tong

I am an artist
Sam Tong

My personal art is spontaneous; I go with the flow
Sam Tong

Likely doesn't realize that image search (on native phone app) is AI
Katherine Wang

I have found my own niche and style in my community
Sam Tong

DO

FEEL

Blocks AI artists online
Michelle

Loved painting from a young age
Sam Tong

Creates art that is connected to her personal relationships (i.e paints gifts from her boyfriend)
Michelle

Likes to do prompts on Instagram (i.e draw "specific painting" in your style)
Michelle

When asked about how personal background/ identity/interests informed her work, she seemed a little uncomfortable/ unsure how to answer
Katherine Wang

Posts unfinished work on IG to be able to get content out daily
Katherine Wang

Art inspired by media, movies, books,
Michelle

Promotes her art online and runs a digital store
Katherine Wang

Currently participating in Inktober (IG challenge, draw and post something every day for a month)
Katherine Wang

Takes photos of things she sees in the world that she might want to draw later, will search it up via text search in app to find later; very spontaneous
Katherine Wang

Sold paintings to her college
Katherine Wang

On IG, promotes her print-on-demand shop and participate in challenges
Katherine Wang

Current IG challenge: draw an animal for every letter of the alphabet
Katherine Wang

Does art challenges with her real-life friend, like swapping paintings
Michelle

Pressured to push out content on IG
Sam Tong

Inspired by things around her, takes photos and looks back later
Sanyia

Feels the most inspired when she is supported and collaborating with other artists
Michelle

Feels very strongly against (repulsed?) by generative AI
Sam Tong

Desires stronger purpose with art; doesn't want to make art just to make it
Michelle

Joy from other people interacting with my Instagram feed
Michelle

Strongly values people (friends and families) and relationships
Sam Tong

Has an all-for-nothing emotional mindset when it comes to art creation
Michelle

Feels big (specifically, positive, wondrous, inspired) emotions
Sam Tong

It "scratches her brain" to engage in creative arts in novel/ spontaneous ways
Sam Tong

Needfinding

Empathy Map: Daisy

Daisy

Insights

- 1 **Relies on Instagram** and feels positively about it, but often feels **burnt out** when trying to **gain a following**
- 2 Feels **negatively** about **generative AI**, but has **affinity for AI image search**, the Instagram algorithm, etc. Doesn't seem to consider the latter category as AI

Needfinding Empathy Map: Jay

Jay

PROFESSOR IN FINE ARTS

SAY

- Always wanted to find another source of income beyond art
- Values balanced education
- Expressive model is when you create what you feel, like the canvas is your diary -- but this is not what he does
- Wishes he waited longer to do art as professional pursuit
- Art is useless in aesthetic philosophy, but important in its value judgement
- Brought up how technology + art future and solutions should incorporate "detournement." The word literally translates to hijacking and rerouting: the way phones are used should be "misused" and subverted in a more reflective way of art/tech (rather than getting rid of phone use entirely)
- "Art is not about greasing the wheels, it's about putting sand in the gears" -- efficiency and solving problems is not the goal of art, that's the goal of tech. "Art is useless, inefficient"
- "Being isolated is not a model of artist that works for me. it works for some ppl, but not me"
- Addressed the role of physical v digital tools, noting there's an opportunity to make interesting work
- "How to use screen-based time in a self-conscious or reflective way?"
- Communities in the future will be built around new ways that art is made, and art that's built around technology
- "I make work to be in conversation with other people, either explicitly in that they would say something about my work or implicitly in response to my work"
- Interest in physical art in objects stems from using old materials + hands again as answer to industrial revolution. Now, there is renewed emphasis on hand made stuff in response to screen-based time
- Social media creates feedback loops of dopamine + disappointment; it takes away from own thoughts
- Not looking for very much in reactions to his art; people give occasionally give pleasantries but not much discourse
- Sees an opportunity to use "new distribution networks to reach new audiences"
- When in a museum, you need to ask: "what is this object, how did it get here, and why do I look at it?"
- "People I have conversations with... I want them to see what I'm doing"
- Experiences "compounding effects" and benefits of networking since his wife is an art historian
- Grew up with strong art-value system, but not necessarily a good or bad thing, is what it is
- Jenny Holzer truisms on BYT billboards an example of how things distinguished (using advertising space in new, interesting way)
- Museums should be more oriented towards local art scene
- "Can't buy friends, [you] have to be there for each other"
- Wishes his phone would project for ease / efficiency of his creative process
- Writing about artists early in your career builds connections
- Institutes benefitting artists who are doing things that are already known (instead of doing new things) doesn't move contemporary art forward
- A lot of people drop out of the art world (i.e. after 10, 15 years); likens it to professional sports
- Better to write about good things because easy to write about the "90 things that are bad"
- Conversations in art history have continuity
- "Institutions [non-profit] have failed us in their catering to market trends instead of critical trends"
- Artists start with broader network and then narrow down ("swelling than contracting")
- "Being an artist is a moving target"
- Feels very conscientious about what they're doing relative to their medium and to art history
- Now has "more intense relationships with fewer people" while about socializing more when younger
- "Choosing to do something creative is sometimes a political statement"
- Modern art in its time is always bad in its present time period (regardless of what era we look at)
- Had good, supportive art history mentors
- Says art and creative pursuits was valued in family
- Mentioned that art needs better institutions: in particular, non-profit art sectors are now becoming more similar to for-profit
- "Ask for forgiveness, not permission" in reference to creating when young as artist
- Mentioned he never uploads personal photos to the cloud because he doesn't want tech companies to have access to and mine his data/photos
- Says art and creative pursuits was valued in family

THINK

- Lack of feedback is unmotivating
- Finds it meaningful when ppl write abt his work
- He would be interested to see digitalized art experiences on a phone instead of having to go to museum
- It's not necessary to grow up with a strong art community or support system to be an artist
- It's easy to criticize, but harder to uplift
- Labeled himself as artist only after art school completion, but thinks current students should call themselves artists
- You have to understand what came before to create something new
- Curators (e.g. museums) should build and engage with other young artists, instead of trying to get 'permission' from more established artists
- What art looks like and what artists say about their art, is not the most important -- how art operates -- how art operates in bigger story is what's the most important
- In order to create freely, he must not rely on art as an income
- Art should primarily be created with the intent to engage or contribute to a discourse
- Art as a passion is more noble and desirable than art as means to making money
- Wishes he did other work besides art when young so that he could pursue art when older on a more stable financial foundation
- Painting / art is very privileged pursuit
- His interests lie in art discourse and conversation, in historical context

DO

- Paints, teaches theory/practice of art, and chair of graduate fine arts program
- Took art history classes at local university in high school
- Did a PHD, in part so could be paid while creating art
- Pursued art history on the side so he had financial stability
- Looks at old historical art w sustained interest for hundred of years
- Had to work harder and juggle multiple responsibilities in order to create when younger
- Is highly research driven
- Faced art criticism when he was young
- Tried to be first person to write about artists to establish identity and voice as artist in professional world
- Creation juggles between conversations that are hundreds of years old + creating something novel
- Wrote art criticisms when he was young by going to recommended galleries chosen by an editor / journal
- Intentionally doesn't upload photos to cloud
- Has done a lot of writing about his own art work
- Makes art based on photographs he takes with his phone
- Journals mostly on pencil + paper (journals in pockets), rarely uses notes app
- Occasionally uses Photoshop
- Experiences a positive feedback loop: what he makes informs what he sees, what he sees informs what he makes
- Keeps in touch with international community through world exhibitions; refers to it as traveling network
- Moved to California for a teaching job
- Sends book(s) about his own work to other people
- Doesn't use social media, since he's guarded about "self-preservation"
- Has long-standing relationships with people at similar stages/ experiences; they've talked 1x a week 1hr/week for 20+ years

FEEL

- Compelled to uplift other artists and focus on the best in their works
- Values personal autonomy and freedom when it comes to creating
- Not much feeling when creating art -- very logical and pragmatic
- Affinity towards long-term friendships and human relationships, especially in art communities
- Distrusting of big tech in his personal life, but curious about the possibilities with art/tech
- Assured (has conviction) in the art process and philosophy he follows
- Averse to the idea of creating purely for the gaze or benefit of others
- Resoundingly set in his ways and beliefs
- Satisfied -- and grateful -- to be in the esteemed and successful position he's in right now
- Passionate about what art "should" be in society
- Somewhat regretful of the paths he took to be financially stable

Needfinding

Empathy Map: Jay

Jay

PROFESSOR IN FINE ARTS

Needfinding

Empathy Map: Jay

Jay

PROFESSOR IN FINE ARTS

Insights

- 1 **Doesn't believe in art's aesthetic value**; instead, cares deeply about the **contexts and discussions** surrounding art pieces
- 2 Doesn't just espouse the importance of community -- proactively **takes the time** to grow and maintain a smaller **network of professionals**

POVs

POVs

We decided to focused on...

Jennie

FREQUENT MUSEUM GO-ER

Andi

TEACHER @ FABRIC STORE

Mary

MUSEUM VISTOR
COORDINATOR

Grace

CURATORIAL CATALOGUING
FELLOW, LEGION OF HONOR

Sky

GALLERY ASSISTANT

Mila

CASUAL WRITER

Daisy

INDEPENDENT ARTIST

Jay

PROFESSOR IN FINE ARTS

POVs

Mila

Mila

CASUAL WRITER

We met...

Mila, a full-time software engineer and long-time creative writer who recently moved from Chicago to San Francisco.

We were surprised to realize...

that even though Mila **creates art to connect** with her creative community, she's **selective** about who she shares her writing and art experiences with and has avoided finding other creatives in SF since moving here.

We wondered if that means...

that Michelle seeks **deeper, trusting connections** over just visibility and exposure due to the **vulnerable** and personal nature of her writing, and the tech culture of SF has prevented her from feeling confident in finding these relationships.

It would be game-changing to...

make processes for **sharing art experiences** feel safe, genuine, and accessible for Mila to find more immediate motivation and fulfillment from her community.

POVs

Mila

Mila

CASUAL WRITER

How Might We

- create intimate creative spaces?
- people feel more safe about sharing their art without being put in a vulnerable state?
- help creatives like Mila find trust and emotional fulfillment in unfamiliar creative spaces, rather than just exposure?

POVs

Daisy

Daisy

INDEPENDENT ARTIST

We met...

Daisy, an independent artist and recent college grad who shares and sells her art **online**.

We were surprised to realize...

that even though Daisy relies on Instagram to share her work and connect with other artists for **inspiration** and **platform**, she mostly engages on Instagram with in-person friends, struggles to put in the extra work to build **new digital connections**, and experiences **burnout** from posting daily.

We wondered if that means...

that for Daisy, trying to get visibility via the Instagram algorithm actually hinders the more **personal connections** that motivate her and sustain her creative growth.

It would be game-changing to...

if creative social engagement felt like reciprocal and **authentic exchange** rather than being performative and draining.

POVs

Daisy

Daisy

INDEPENDENT ARTIST

How might we

- encourage people to share art daily without being trapped by algorithms?
- connect artists who want to be mentored, and ones who want to act as mentors?
- redesign digital spaces to inspire wonder and emotional fulfillment through the discovery of human art and the natural world?

POVs

Jay

Jay

PROFESSOR IN FINE ARTS

We met...

Jay, a successful artist, art critic, and professor who has valued being in art circles all his life.

We were surprised to realize...

that despite his success, Jay regrets pursuing art professionally early on and feels that it **forced him to create for recognition and market appeal** rather than **authentic creative exploration** and the **productive dialogue** at the heart of art.

We wondered if that means...

that for Jay, creating for the market **detracts from conversation** around art, which unlocks the true value.

It would be game-changing to...

make the context and **conversations** around art more **accessible** to **inspire curiosity** and **personal engagement**.

POVs

Jay

Jay

PROFESSOR IN FINE ARTS

How might we

- change how art is presented (like at museums)?
- encourage dialogue and conversations among people and spark new connections?
- make exploring art contexts and ecosystems more childlike, like solving a puzzle?

POVs

Top HMWs

How might we help creatives find **trust** and emotional fulfillment in **unfamiliar creative spaces**, rather than just exposure? (*Mila*)

How might we make exploring art contexts and ecosystems more **childlike**, like solving a **puzzle**? (*Daisy*)

How might we redesign digital spaces to inspire **wonder** and emotional fulfillment through the **discovery** of human art and the **natural world**? (*Jay*)

Solutions

Solutions

Top HMWs

How might we help creatives find **trust** and emotional fulfillment in **unfamiliar creative spaces**, rather than just exposure?

How might we make exploring art contexts and ecosystems more **childlike**, like solving a **puzzle**?

How might we redesign digital spaces to inspire **wonder** and emotional fulfillment through the **discovery** of human art and the **natural world**?

Solutions

Experience Prototype 1

Solution

Take a photo of artwork, add reflection, and see what others thought about the same piece; location-based map

Assumption

People would take the time to log their experiences with art that they consume and interact with

Experience Prototype Design

Cantor Arts Center (Gates of Hell): Glass jar that prompts “Share your thoughts on the Gates of Hell”, pens, and sticky notes

- Engagement measured: Observed how many people looked at The Gates of Hell vs. shared a sticky note

Experience Prototype 1: Participants

Target Demographic

Art enthusiasts / consumers (range of 'casual' enthusiasts to professional artists)

Participants in prototype

Visitors of Cantor Arts Center @ Gates of Hell exhibit → museum visitors are at minimum some extent of an art consumer or enthusiast, whether casual all the way to professional

Left out communities

People without access to art resources to consume, understand, or participate in art

Experience Prototype 1: Results

What Worked + Didn't Work?

- ✓ Participants shared insightful reflections
- ✗ Participants weren't able to engage with people's reflections'; participants can't look back at own notes

New Learnings

- **30 minute observation:** 25 people came to exhibit, 12 people read the message box, 10 people took pictures of exhibit, 1 person took a picture of message box, 2 people wrote a note
- **4 hours:** 7 people wrote reflections / notes
- Visitors stopped + looked for long periods of time at The Gates of Hell, and many took photos of exhibit
 - People have ways of logging + looking back at art

Assumption Validated?

- ✓ **Validated:** Individuals took photos of exhibit and were willing to submit reflections to a new, unknown jar when provided with reflection materials

Solutions

Top HMWs

How might we help creatives find **trust** and emotional fulfillment in **unfamiliar creative spaces**, rather than just exposure?

How might we make exploring art contexts and ecosystems more **childlike**, like solving a **puzzle**?

How might we redesign digital spaces to inspire **wonder** and emotional fulfillment through the **discovery** of human art and the **natural world**?

Solutions

Experience Prototype 2

Solution

Grouping art together in personal ways that can be shared and commented on by others

Assumption

People are motivated enough to draw connections between art

Experience Prototype Design

Print out 16 pieces of visual art and prompt participants to group them.

- Engagement measured with time spent, observation, and post-activity reflections

Experience Prototype 2: Participants

Target Demographic

Casual creators or art enthusiasts

Participants in prototype

Individuals who consider themselves creatives, but not 'artists'

- P1: musician, singer, consumes music- related art + indigenous art
- P2: draws, consumes literature and music frequently

Left out communities

Individuals with very little to no background in art knowledge, and who have no existing connections to art pieces

Experience Prototype 2: Results

What Worked + Didn't Work?

- ✓ Thoughtful, personal reflections with verbalized emotions; enjoyment of activity + discussing choices made
- ✗ Only made connections because prompted to do so; preferably more prototype testing

New Learnings

Participant 1

- Spent 1m:11s; gave detailed explanations for groupings with personal connections, developed names for groupings with strong further desires to share with others,

Participant 2

- Spent 0m:49s; wouldn't make connections outside of activity; interested in connections of other artists'

Both made connections to other forms of media (music, movies)

Assumption Validated?

- 🔍 **Somewhat validated:** Participants enjoyed and engaged in the activity; reflective conversations throughout; P2 reported to have no interest in making connections between art unprompted

Solutions

Top HMWs

How might we help creatives find **trust** and emotional fulfillment in **unfamiliar creative spaces**, rather than just exposure?

How might we make exploring art contexts and ecosystems more **childlike**, like solving a **puzzle**?

How might we redesign digital spaces to inspire **wonder** and emotional fulfillment through the **discovery** of human art and the **natural world**?

Solutions

Experience Prototype 3

Solution

Art database indexed by AI; placed on large graphs that users can traverse through to find connected artwork

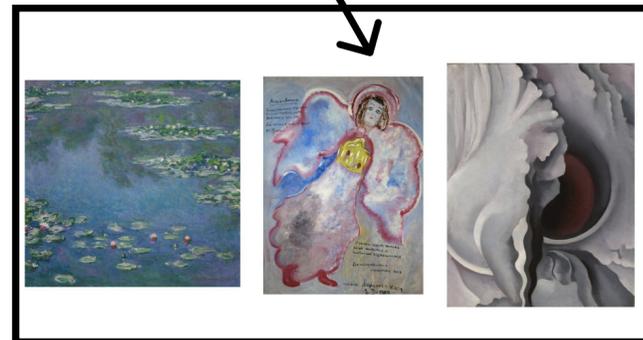

Assumption

People would explore similar art and how the pieces are related in an open-ended way without a target goal (curiosity!)

Experience Prototype Design

Selects image from a display, reveals more options based on selection, and repeat

- Condition A: Tested without goal
- Condition B: Tested with goal of favorite image for room.
- Engagement measured with time spent, observation, and post-activity reflections

Experience Prototype 3: Participants

Target Demographic

Casual creators or art enthusiasts

Participants in prototype

Individuals who consider themselves creatives, but not 'artists'

- P1: advanced musician, go to museums, consumes women + nature-based paintings, music
- P2: weaver, ceramicist

Left out communities

Individuals with very little to no background in art knowledge, communities with less known or widely-accessible art

Experience Prototype 3: Results

What Worked + Didn't Work?

- ✓ Strong engagement and focus; strong desire to keep exploring after activity
- ✗ Spent less time on Condition B because the same set of images provided right after Condition A; preferably more prototype testing

New Learnings

Participant 1

- Condition A → 8m:03s (14 traversals), Condition B → 0m:46s (2 traversals)
- Preferred Condition B

Participant 2

- Condition A → 5m:20s (26 traversals), Condition B → 1m:12s (10 traversals)
- Preferred Condition A

Both compared to a game; enjoyed exploring; wished there were more images to explore

Assumption Validated?

- ✓ **Mostly validated:** Engaged (emotionally, time-wise), despite getting repeats. However, one participant preferred a specific, while the other preferred no goal.

Next Steps

Next Steps

Final Solution?

Solution 1: Take a photo of artwork, add reflection, and see what others thought about the same piece; location-based map

Solution 2: Grouping art together in personal ways that can be shared and commented on by others

Solution 3: Art database indexed by AI; placed on large graphs that users can traverse through to find connected artwork

Next Steps

Final Solution?

Solution 1: Take a photo of artwork, add reflection, and see what others thought about the same piece; location-based map

Assumption validated: Strong engagement + willingness to log art experiences via existing and new methods

Solution 2: Grouping art together in personal ways that can be shared and commented on by others

Solutions 2 + 3 had very similar target demographics and participant groups, and are difficult co-existing solutions.

Solution 3: Art database indexed by AI; placed on large graphs that users can traverse through to find connected artwork

Solution 3 validated assumptions more than Solution 2: significantly more engagement and increased desire to explore more. However, still want goal-oriented exploration...

Next Steps

Final Solution + Ethical Implications

Art database on platform that is indexed by AI and placed on various large graphs that users can traverse to find similar connected artwork defined by some metrics, while users can track and save the artwork they explore via reflections + commentary with others.

-  **Target Demographic:** Anywhere from casual consumers or art enthusiasts to professional 'artists'
-  **Communities excluded:** Individuals with very little to no background in art knowledge, communities with less known or widely-accessible art or art forms
-  **Ethics:** Implication of deciding how we will populate art database or allow for database to be populated by users

Next Steps

What's next?

1

Based on new solution, research the existing products in the problem space

2

Brainstorming stakeholders and ethical implications of solution

3

Defining user tasks

4

Developing a concept video

Questions?

Appendix

Appendix

Interview Questions

Background

- Tell us about your background as an artist: What kinds of art do you create? Do you also like to consume art, and what kinds or forms?
 - Why do you create?
- How do your personal interests, background, or identity inform your work? Is there a specific work you could give an example of?

Search and Databases

- Where do you look or search for inspiration? Do you use digital tools or platforms?
 - How do you 'track' your inspiration and reflect/remember it?
 - What makes IG/TT/Etsy/etc conducive for this?

Community

- How do you connect with other artists or creators? Can you tell me about an interaction with another creative or a creative community that was meaningful?
 - Is this digital? Online? Where do you find these connections?
 - What makes IG/TT/Etsy/etc conducive for this?
 - Why do you share your work or like to see the work of others? Why?
- Can you tell me about a memorable experience sharing your work online or interacting with others' work online?
 - Why do you post your art on social media?
 - More follow up questions to probe this further, e.g.: Why is connecting with other artists important to you?
 - Distribution/selling: How do you market your work and find an audience online to get commissions or sell products? (find a more natural way to tie it in)

Appendix

Interview Artifacts

Daisy's painting of objects meaningful to her

Jay's (Jordan's) Creative Process

Appendix

Mila's HMWs Brainstorm

1. HMW allow people to post online in non-stressful ways?
2. HMW help Michelle find more continuity between the tech/art sides of her?
3. HMW create intimate creative spaces?
4. HMW create belonging for artists – true belonging that doesn't feel shallow?
5. HMW allows artists to give and receive feedback?
6. HMW spark less shallow digital relationships?
7. HMW create an (online) community that simulates friends and family (organic community)?
8. HMW make art creation sustainable financially, emotionally, and physically?
9. HMW connect people to resources to create?
10. HMW make creators trust the people that consume their art?
11. HMW builds communities for collaboration, not exposure?
12. HMW create long-term, long-lasting community?
13. HMW foster local communities of artists that feel particularly intimate and connected?
14. HMW help people feel more safe about sharing their art without being put in a vulnerable state?
15. HMW help artists find new meaningful interpersonal one-on-one connections with other artists?
16. HMW make art communities a "release" from the stress of everyday life (particularly, work and people's day jobs)?
17. HMW connect artists and creatives who are complete strangers but have similar interests?
18. HMW build online platforms that support IRL connections?
19. HMW put Michelle out of her comfort zone and challenge her creative process?
20. HMW help Michelle challenge her assumptions about art in SF?

Appendix

Daisy's HMWs Brainstorm

1. HMW build a creative sharing process that inspires, not drains?
2. HMW avoid burn out with artists?
3. HMW encourage people to share art daily without being trapped by algorithms?
4. HMW turn sharing art online from an obligation to something positive?
5. HMW connect artists with each other in a way that feels organic and not contrived/forceful?
6. HMW create opportunities for digital artists to build trusting relationships, rather basing relationships on likes and comments?
7. HMW frame AI tools in a way that assists artists' work and discovery?
8. HMW connect artists who want to be mentored, and ones who want to act as mentors?
9. HMW help people share their personal stories about their art?
10. HMW we make online art connections more genuine, similar to in-person interactions, and less performative?
11. HMW use AI to allow artists to be inspired not by AI art, but by the discovery of human art and the natural world already out there?
12. HMW decouple the art community's networking with sharing and publicizing art online?
13. HMW make visibility not the goal?
14. HMW gamify engagement with other artists?
15. HMW help artists discover different microcommunities?
16. HMW make creative inspiration online feel as personal as in-person connections?

Appendix

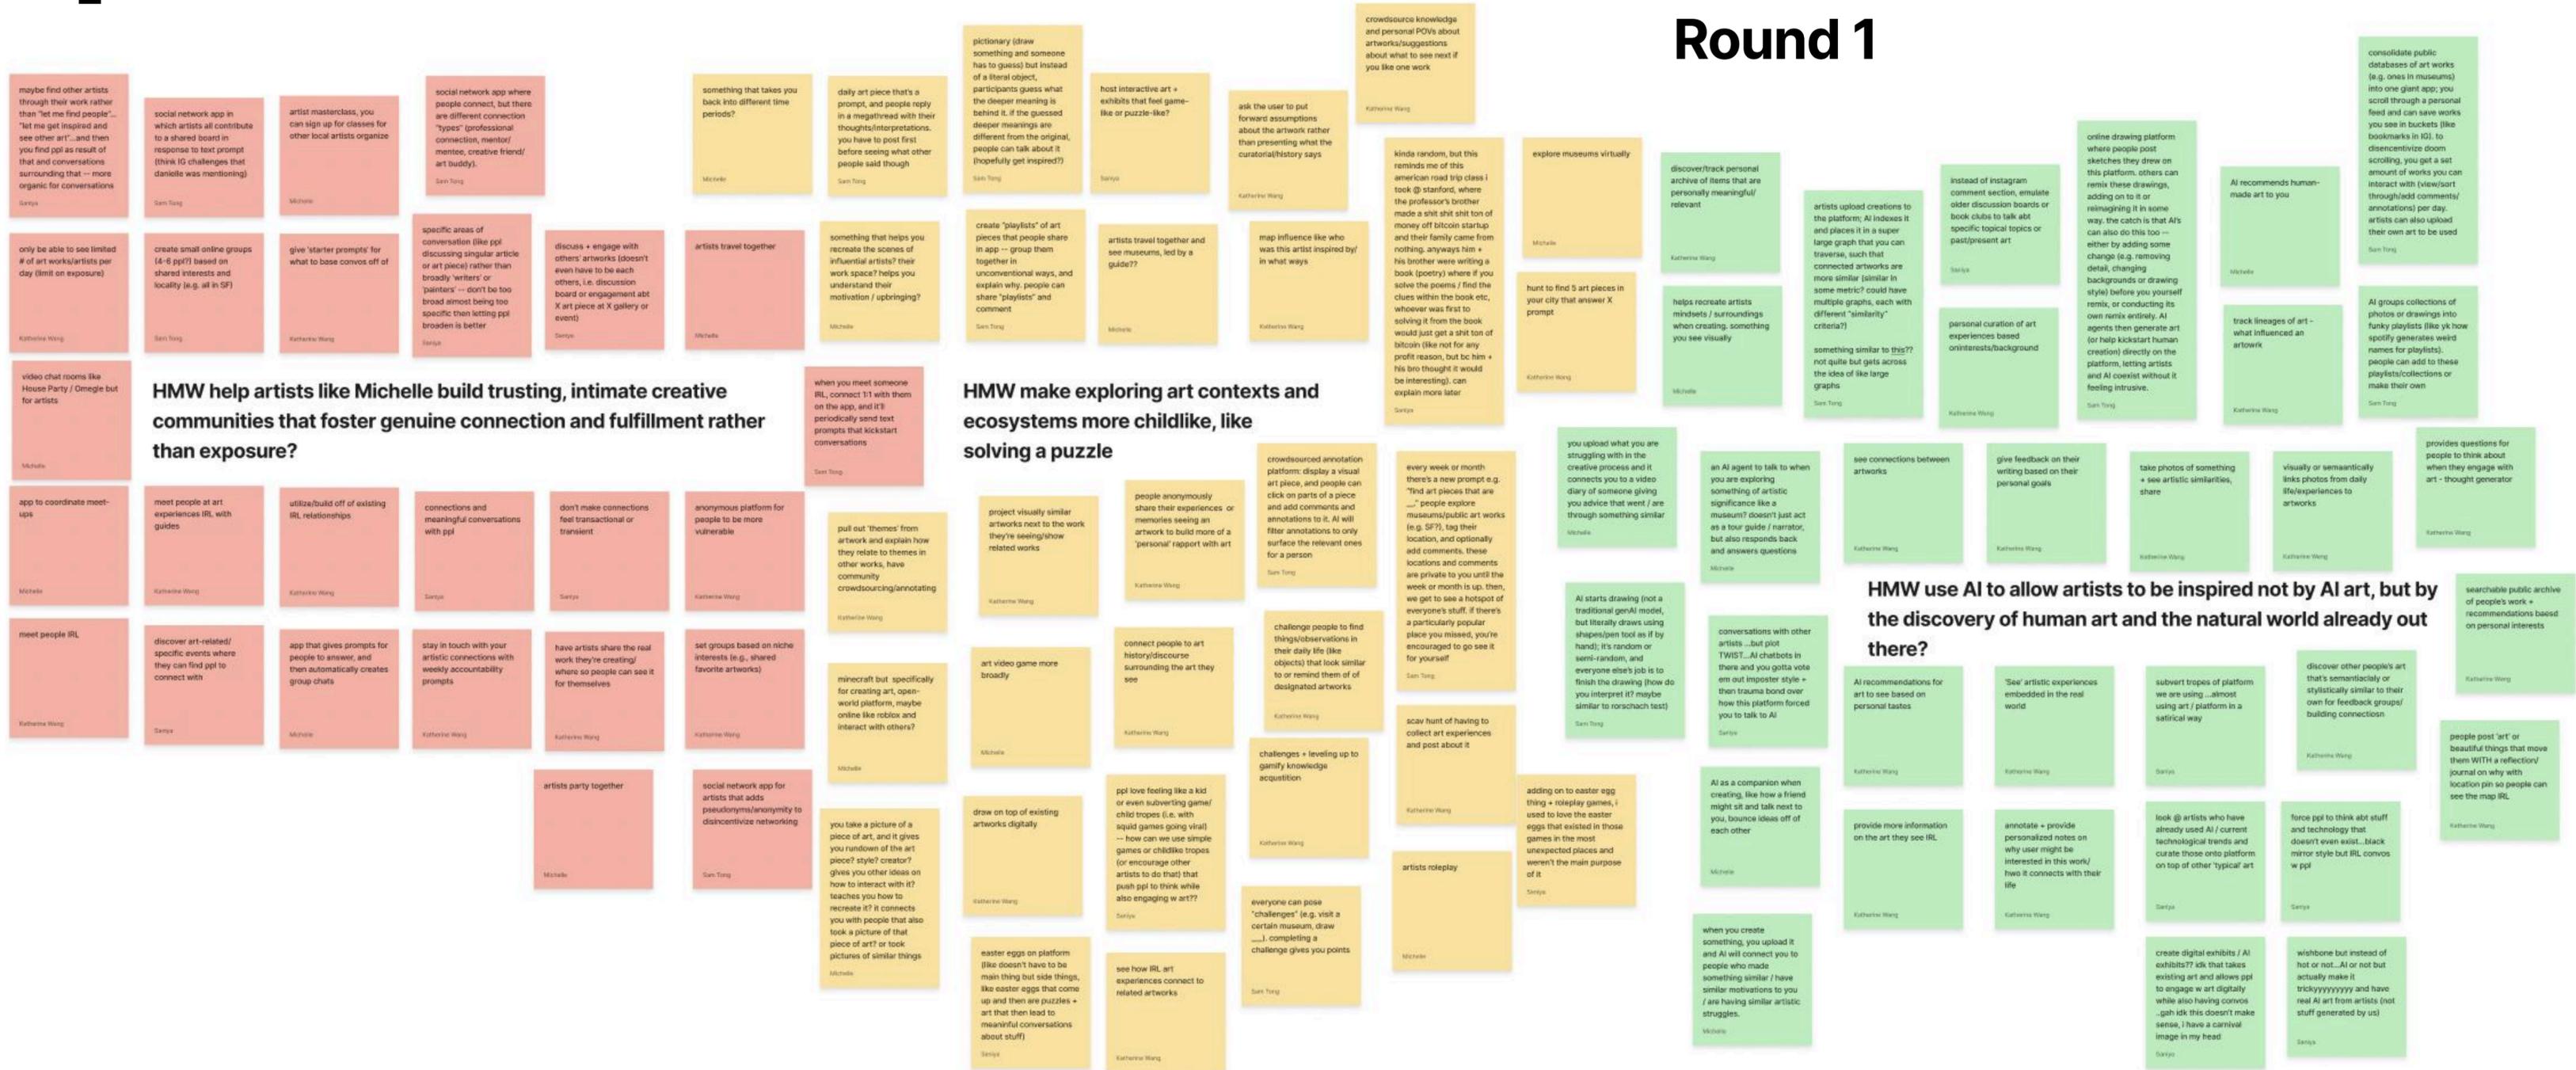

Jay's HMWs Brainstorm

1. HMW bridge the knowledge gap for laypeople?
2. HMW immerse people in artistic ecosystems?
3. HMW use the digitization of present-day to be a way to directly consume art (in contrast to digitization connection people to art they can go + consume)?
4. HMW change how art is presented (like at museums)?
5. HMW gamify art education?
6. HMW encourage people to make art together?
7. HMW make exploring art ecosystems like solving a puzzle?
8. HMW get people interested in the contexts surrounding art to begin with?
9. HMW encourage dialogue and conversations among people, especially new connections?
10. HMW shift the status quo from art as financial stability to art as conversational dialogue?
11. HMW make discussions of art contexts and ecosystems more child-like (in exploration)?
12. HMW encourage artists to create for meaning, not profit
13. HMW support failing art?

굉장하다

It is interesting that
there is only humans,
no evil 'creatures', demons,
or other hell-like beings.

The screenshot shows a presentation software interface with a slide containing three images. The slide is titled '3' and is highlighted in blue. The images are:

- 1. A classical painting of a man in a bath, likely by Titian.
- 2. A colorful abstract pattern of circles in various colors (red, orange, yellow, green, blue, black) on a dark blue background.
- 3. A painting of a pond with lily pads, likely by J.M.W. Turner.

The interface includes a menu bar (File, Edit, View, Insert, Format, Tools, Extensions, Help), a toolbar with various icons, and a slide navigation pane on the left with 8 slides. The slide '3' is currently selected.
