Piano!

The background is a light cream color with a fine, dotted pattern. It is decorated with various musical and abstract elements: a yellow musical note in the top left, a blue musical note below it, a blue circle in the bottom left, a yellow and orange brushstroke in the bottom left, a red treble clef in the middle right, a light blue musical note in the bottom right, a red treble clef in the bottom right, and a red brushstroke in the bottom right. In the top right corner, there are four vertical, rounded rectangular bars in shades of pink and red, resembling a stylized musical staff or a set of keys.

# keynotes

**where feedback strikes a chord**

# What is keynotes?

pssst...watch our [concept video!](#)

## Our Value Proposition:

Creates a platform where  
**musicians can connect and  
obtain crowdsourced and  
one-on-one feedback**

# From...

# The Problem

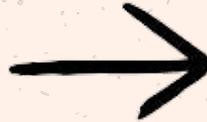

## **Problem:**

Musicians **struggle** to find reliable sources of **feedback**, which impacts their **confidence** and **self-perception**

# The Problem + Solution

## Problem:

Musicians **struggle** to find reliable sources of **feedback**, which impacts their **confidence** and **self-perception**

## Solution:

A platform where musicians can **connect** and obtain **one-on-one** and **crowdsourced feedback**

# Roadmap

**01** Intro to keynotes

**02** Values in Design

**03** Tasks

**04** Usability Goals

**05** Revised Sketches

**06** Task Flows

**07** Implementation

# Value 1: Protecting Users

**The value tension:**  
Free speech vs. protecting users, especially marginalized or vulnerable users

## Design features to address:

- Structuring feedback inputs to include positive and negative comments
- Community-enforced moderation: users can report other users
- Platform-enforced moderation: automatic flags/filters for harmful language

## Value 2: Outreach and Accessibility

**The value tension:**  
Ease of access online vs. equity (some users may not have equipment)

### Design features to address:

Though lack of access is a systemic issue, we can try...

- Fostering partnerships with schools
- Creating community forums for sharing resources
- Making an information sphere for finding practice rooms and studios

## Value 2: Cultural Understanding

**The value tension:**  
Maximizing users' reach vs. protecting against cultural alienation, discrimination

### Design features to address:

- Adding context to uploaded music
- Giving users the option to limit who listens to their music
- Allowing users to subscribe to a group of people who create/listen to a certain type of music, live in a certain area, or are part of a certain cultural group
- Establishing community guidelines around giving feedback

# Roadmap

**01** Intro to keynotes

**02** Values in Design

**03** **Tasks**

**04** Usability Goals

**05** Revised Sketches

**06** Task Flows

**07** Implementation

## 4 Task Flows

Simple

Upload a new track

simplified from A5 task!

View feedback on your track

Moderate

Find a new musician on the app and give them feedback

Complex

Change your preferences for which musicians can give you feedback

# Roadmap

**01** Intro to keynotes

**02** Values in Design

**03** Tasks

**04** Usability Goals

**05** Revised Sketches

**06** Task Flows

**07** Implementation

# Usability Goals

We want keynotes to be...

**Robust**

Minimal error rates

**Key measurement:** errors per task

**Efficient**

Quick task completion

**Key measurement:** time taken per task

# Usability Goal Progress

## **Robust:**

clarify function  
of elements

Renamed bottom tabs

Added "Upload Track" to button for  
uploading media

Changed "Connect" button to "Add  
Friend"

## **Efficient:**

simplify steps  
of each task

Removed redundant "Give Feedback"  
button

Removed redundant track info page in  
"Give Feedback" task flow

Reduced steps to upload media

# Roadmap

**02** Values in Design

**03** Tasks

**04** Usability Goals

**05** Revised Sketches

**06** Task Flows

**07** Implementation

# Design Change #1

## Problem

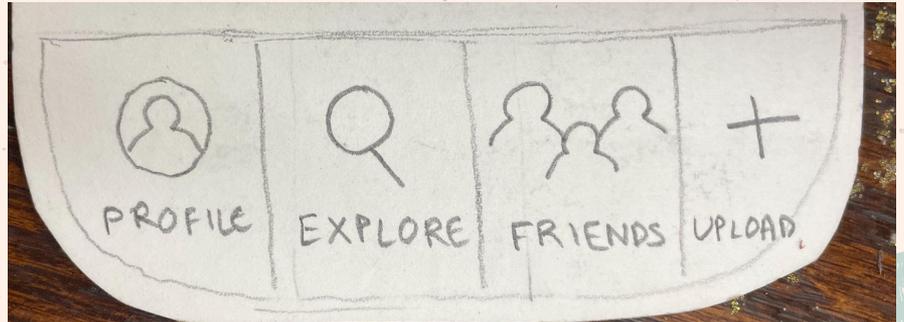

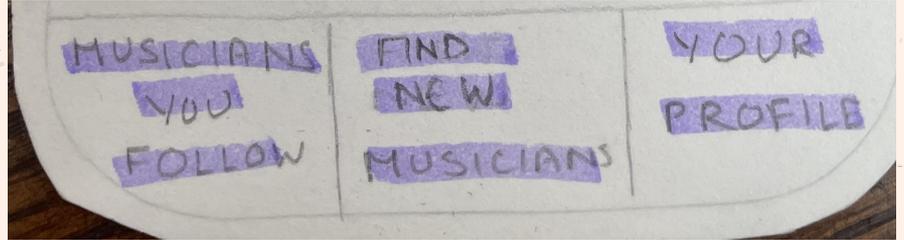

Users found the navigation bar unintuitive and hard to interpret

## Solution

Clarify the description of each tab, and add icons for visual cues

## Goal

This will make our prototype more robust

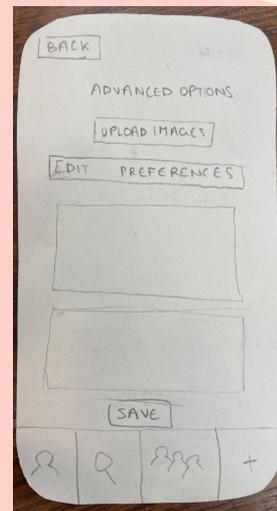

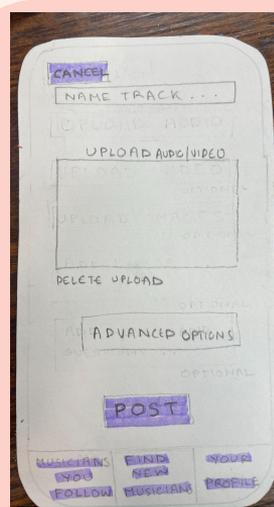

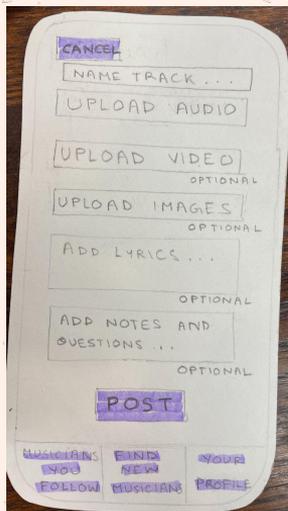

## Design Change #2

### Problem

The upload new music page was more complicated than it needed to be

### Solution

Have a simplified page to add audio/video, and a pop up or separate page for more complicated additions like lyrics, notes, and questions

### Goal

This will make our prototype more efficient to use

## Efficiency: Design Change #3

### Problem

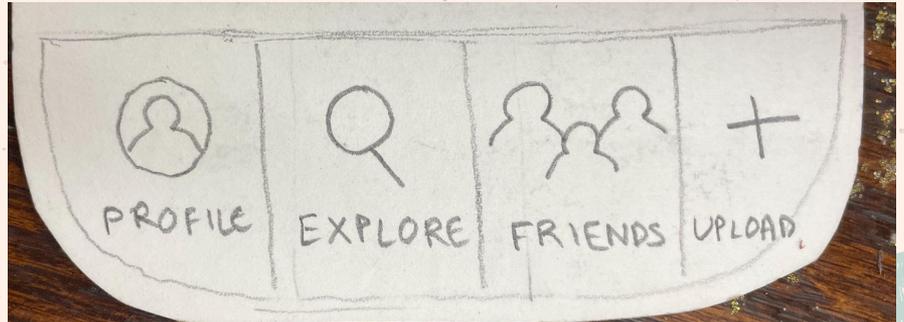

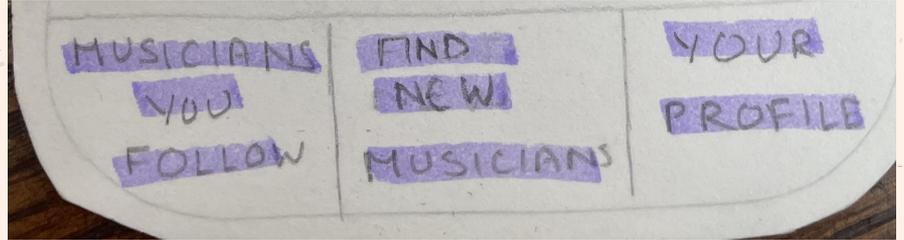

The core function of adding a new track was only available on certain screens

### Solution

Adding an upload track section to the navigation bar

### Goal

This will make our prototype more efficient to use

# Roadmap

**01** Intro to keynotes

**02** Values in Design

**03** Tasks

**04** Usability Goals

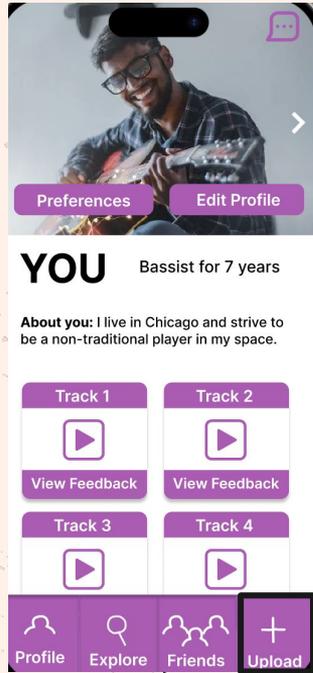

**05** Revised Sketches

**06** Task Flows

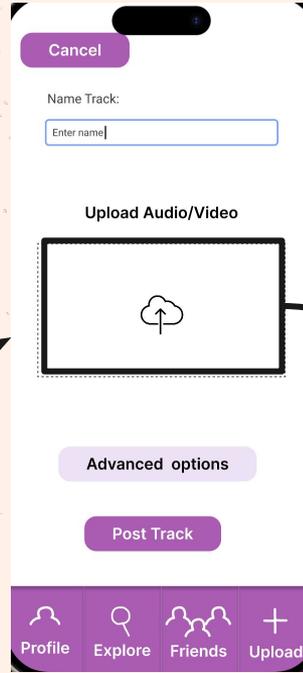

**07** Implementation

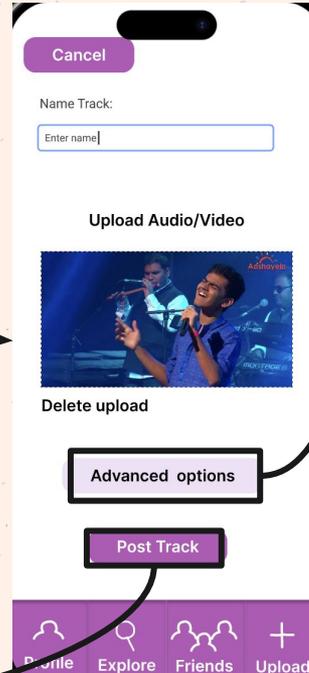

# Task 1: Upload a New Track

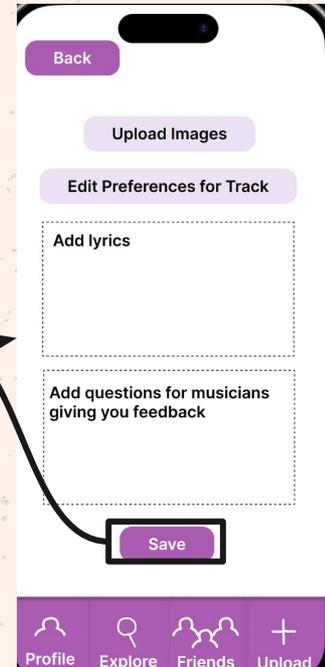

Press the “upload” button in the navigation bar.

Upload audio, video, and track name.

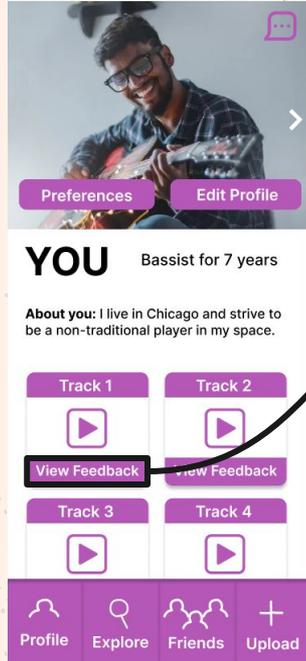

Click “post track” to finish your post or click “advanced options” to include advanced details.

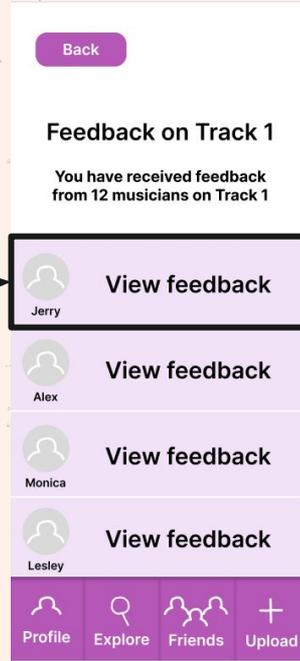

Add lyrics, questions, additional images, or edit preferences for your reviewers and click “save” once finished.

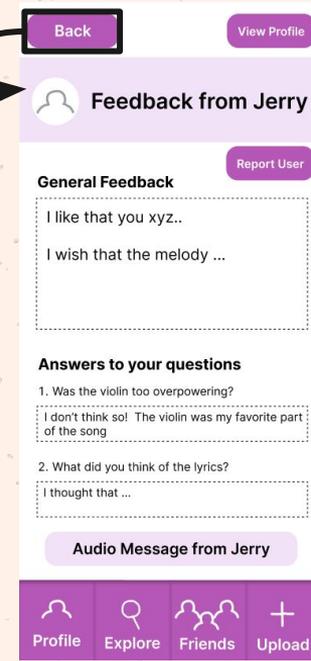

# Task 2: View feedback on a task

Select a track and press the “view feedback” button.

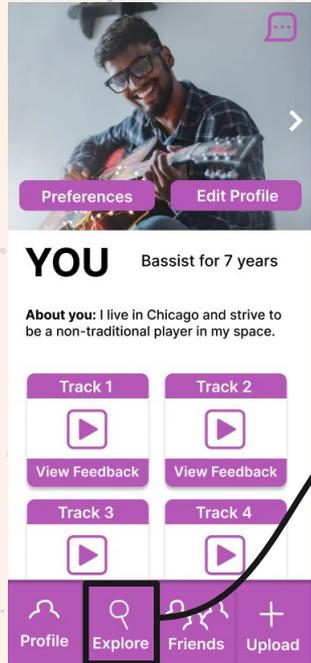

Select whose feedback you want to view and click “View Feedback”.

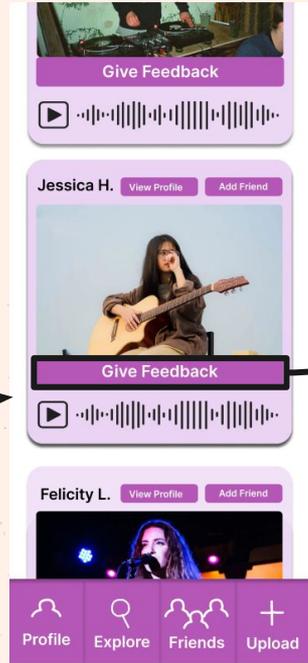

Review feedback and click “back” if you want to return to the previous page to view feedback from others.

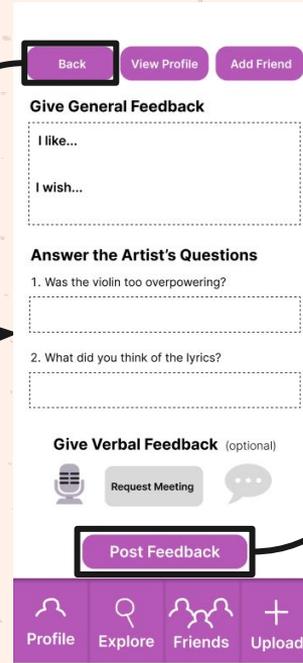

# Task 3: Find a new musician and give feedback

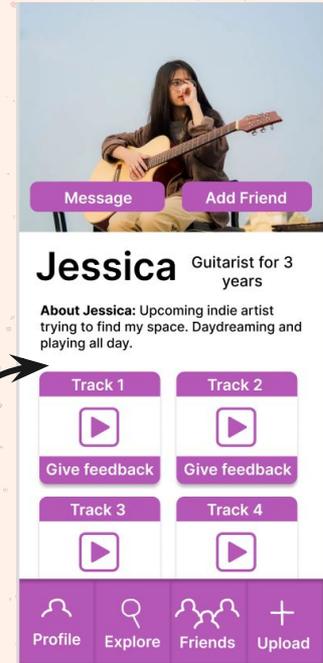

Click the “Explore” button to find new musicians and music.

Find a music and track that interest you and select “Give Feedback”.

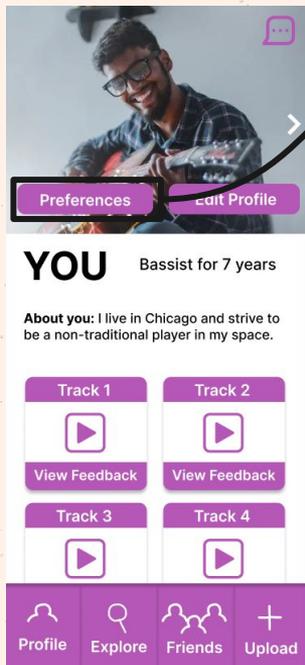

Fill in general feedback and answer the artist's questions. Press “post feedback” to finish.

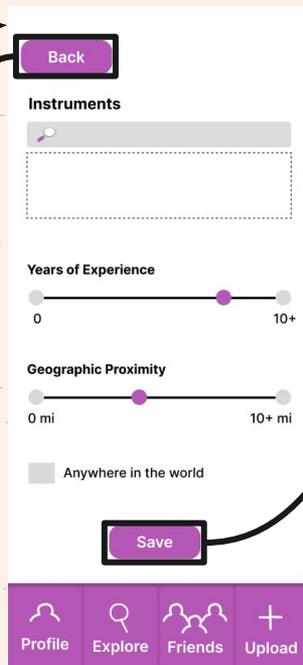

Taken to artist's profile after giving feedback for further exploration and connection.

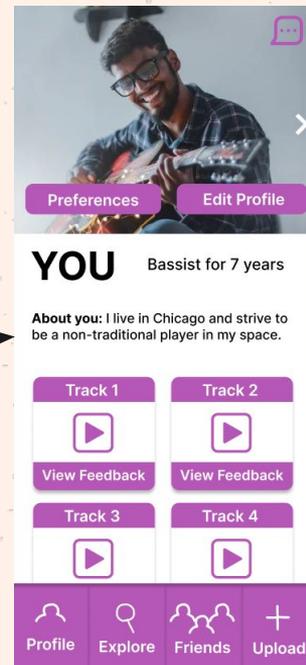

# Task 4: Change your preferences for which musicians can give you feedback

Click on “preferences” on your profile page.

Change your preferences and click “save”.

Go back to profile after editing profile.

# Roadmap

**02** Values in Design

**03** Tasks

**04** Usability Goals

**05** Revised Sketches

**06** Task Flows

**07** Implementation

# Implementation

Our prototype was implemented using Figma

## Pros

- Reasonable learning curve
- Collaborative and cloud-based

## Cons

- Occasionally buggy
  - Need to create a new frame for every minor change
- 
- 

# Limitations

- Does not test the ways in which users would interact socially on the app
- Features we did not implement at this stage
  - Messaging
  - “Adding a friend”
- Community guidelines are still to be added to the prototype

# Hard-Coded

- Upload audio and video only has one option
- Wizard of Oz: The algorithm only recommends 2-3 users right now
- Users cannot actually edit their profile/preferences, they can only see the relevant screens for these tasks

## Efficiency: Design Change #4

### Problem

Users were confused about having multiple screens before they could give feedback to a new musician

### Solution

Display notes and allow users to enter feedback on one single screen to avoid an extra unnecessary step for the user

Removed this screen entirely

# Robustness: Design Change #5

## Problem

Tester thought that the connect button would help them give feedback to a new musician

## Solution

Remove “connect” button and instead replace with something that makes it clearer that the function is just to add a musician as a friend → “add friend” button
