# Bottle: “Share everyday moments”

We wanted a line that encapsulates the function of our project, which is to allow users to record and share their everyday moments with their loved ones in a fun way, which is to store them in a bottle.

# Overview of Problem & Solution

The **primary user** of Bottle is people in long-distance relationships, which include romantic, platonic, and familial.

## Problem:

**Busy lives** and **time-zone differences** make it difficult for long-distance loved ones to **share updates** in real-time. During limited conversations, people have a hard time **recounting little moments** throughout their day, moments we believe are critical in maintaining emotional intimacy in relationships.

## Proposed Solution:

Bottle makes updating **easy**:

- 1) Users store **“mundane” updates** throughout their day (text, image, videos, etc.) to a bottle, in which 2) they **exchange** with a receiver's, to be opened and **shared at a set time**, optionally over a video call, enriching conversations.

# Market Research

Bottle

vs.

Locket

Cappuccino

BeReal

Agapé

*market research*

# Locket

A widget that shows live photos from your best friends, as a little glimpse of what everyone's up to throughout the day

## **What works:**

- people can see glimpses of what their friends are up to throughout the day, making them feel more involved
- can reply and react to photos
- easy to access & view since Locket is a widget for home screens
- acts as a mini reel of your friends' lives

## **What doesn't work:**

- limited to only images, video, and captions as a way to capture glimpses, unlike Bottle's range of mediums (text, visual, audio, etc.)
- no build-up of anticipation or final recap of the person's day, unlike Bottle's exchange and unlocking of each other's curated moments

*market research*

# Locket

A widget that shows live photos from your best friends, as a little glimpse of what everyone's up to throughout the day

## **Takeaways:**

- People like seeing glimpses into their friends and loved ones lives during the day.
- People like tokens/mementos like how Locket serves as a widget that they can easily access on their home screen, and we can apply this same concept of having a memento to Bottle.
- Like Locket, we want people to feel like they have a better understanding of their loved ones' days through interesting, fun updates so that they can deepen their connection despite the distance

*market research*

# Cappuccino

An app where the user and their friends record short audio stories throughout the day, like updates, funny moments, or drama, which are compiled into a mini-podcast

## **What works:**

- compiles peoples' updates in an interesting, engaging way (storytelling through podcast)
- friends are kept informed about each other's lives even when they are too busy to call and catch up

## **What doesn't work:**

- limited to only audio as a way to record, unlike Bottle's range of mediums (text, visual, audio, etc.)
- mini-podcast is a mix of multiple people's experiences, which can be confusing to separate, unlike Bottle's individual collections of moments per person

*market research*

# Cappuccino

An app where the user and their friends record short audio stories throughout the day, like updates, funny moments, or drama, which are compiled into a mini-podcast

## **Takeaways:**

- Having a variety of different mediums (text, audio, image, etc.) for users to capture their daily moments will give users more flexibility, ease, and creativity versus only being able to record their moments as audio.
- Like Cappuccino, we want Bottle to compile our users' recorded updates in a way that is fun and interesting to go through at the end of the day with their loved ones

# BeReal

A social media app whose main feature is a daily notification that encourages users to share a photo of themselves and their immediate surroundings given a randomly selected two-minute window every day.

## What works:

- Captures authentic, mundane moments
- Connects friends and family by checking up on what they're doing at the exact same moment
- No advertising or follower counts, de-emphasizes social media addiction
- Friends can comment and respond
- Only a small self-selected group of friends can see each other's BeReals

## What doesn't work:

- Only goes off at the same time for people in the same time zone
- Daily two-minute window has been argued to contribute to social media fatigue
- Only in-app pictures are transmissible--- no videos or other media

*market research*

# BeReal

## Takeaways:

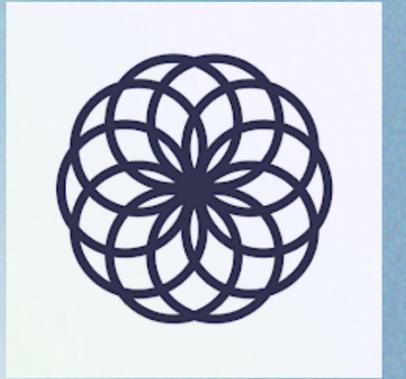

- Capturing mundane moments is fun for friends to exchange and creates transparency and emotional intimacy
- Bottle is focused on an **ongoing** moments collection process of **different media**, not just one picture
- Having no follower counts and advertising is refreshing removes the feeling of needing to be “popular”
- Having an app for just close circles of friends fosters connection

## Implications:

- There are still no apps that foster connection across time zones

*market research*

# Agapé

A relationship wellness app that helps users feel close to their friends, family, and partners by having them answer daily questions to spark meaningful conversations.

## **What works:**

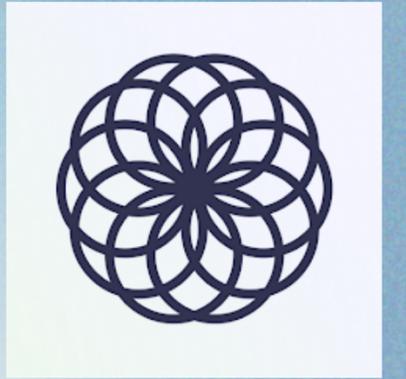

- Adjusts to the relationship type
- Allows users to connect even at a long distance
- Keeps a streak of how many days users have used the app for conversations, and keeps a record of the conversation in app
- Eliminates the issue of getting past small talk

## **What doesn't work:**

- both sides of the relationship need to be engaged and committed to answering the questions, or it'll feel one sided
- Questions are surface level
- App is too expensive to use, as it requires payment for it's most basic function

*market research*

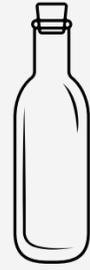

# Agapé

A relationship wellness app that helps users feel close to their friends, family, and partners by having them answer daily questions to spark meaningful conversations.

## **Takeaways:**

- Having a guided way to connect in relationships is helpful in enhancing the connection in the relationship, especially at a long distance
- It's important to save memories of conversations and events that happen every day for users to look back on
- Like Agapé, we want Bottle to be able to connect users in any type of relationship, even at a long distance

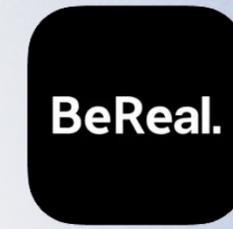

BOTTLE

LOCKET

CAPPUCCINO

BEREAL

AGAPÉ

VARIETY OF MEDIA

FREE TO USE

ALLOWS FOR MULTIPLE DAILY UPDATES

CREATES DAILY RECAP MEMENTOS

ACTIVELY ENCOURAGES CONVERSATION

# Values in Design

Communication over long distance is hard. Bottle promotes **human connection** through **uplifting, collecting**, and **sharing** the **little, mundane moments** with long-distance family and friends. We aim to offer an **efficient** and **fun** way to recap one's days through **locking the time** bottles can be exchanged and opened, building anticipation.

Core values include:

- **authenticity**: promoting authentic moment collection
- **inclusivity**: bring people in closer, involve them into each other's lives
- **fun**: make virtual communication fun
- **flexibility**: work for people of all schedules and lifestyles

# Stakeholders

**Direct Stakeholders:** People in long distance relationships with significant others, family, and friends

**Indirect Stakeholders:** The people surrounding people in long distance relationships like family and friends of the people in the long distance relationship

# Ethical Implications

## **Potential value conflicts:**

- Might promote excessive phone usage to document moments throughout the day
- Might lead to overanalysis and comparison over each other's days

## **Tech Ethics Tarot Cards**

- What cultural shifts might our product create?
  - It could enrich conversations by discovering areas of overlap in each other's lives. Conversely, it could promote oversharing or excessive documentation of one's lives.
- What would a bad actor do with our product?
  - Since we value privacy, we wouldn't know if the content being transmitted might be offensive or criminal. Monitoring the communication while preserving user privacy is something we will consider.

# Tasks

## **Simple**

User writes a message and puts it into the bottle

---

## **Moderate**

Users discuss and react to the messages received.

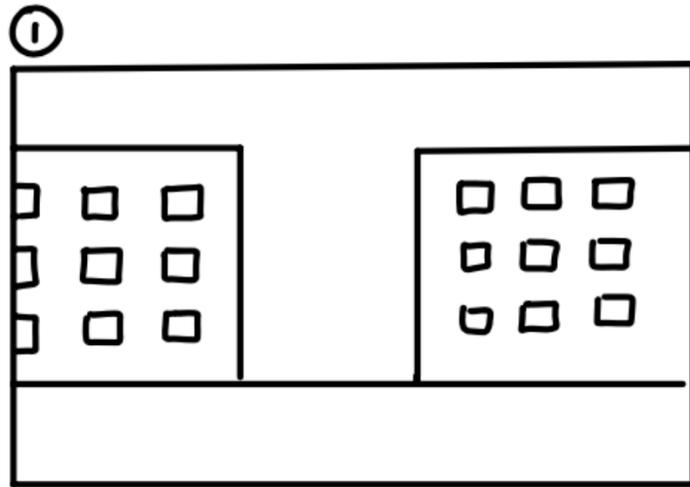

---

## **Complex**

Users find a note associated with an emotion.

---

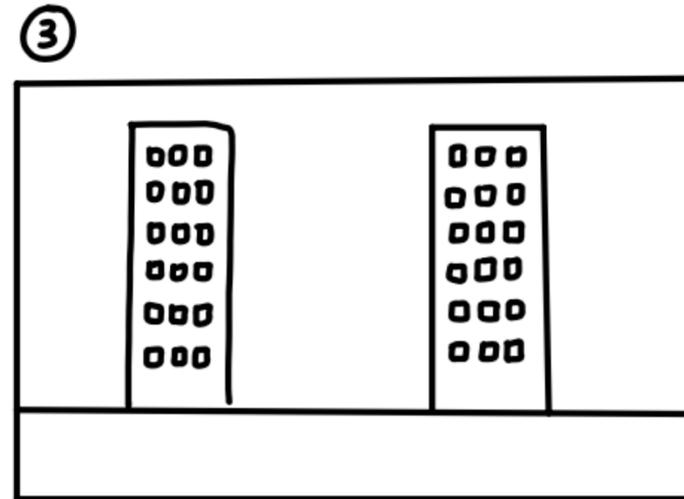

# Storyboard

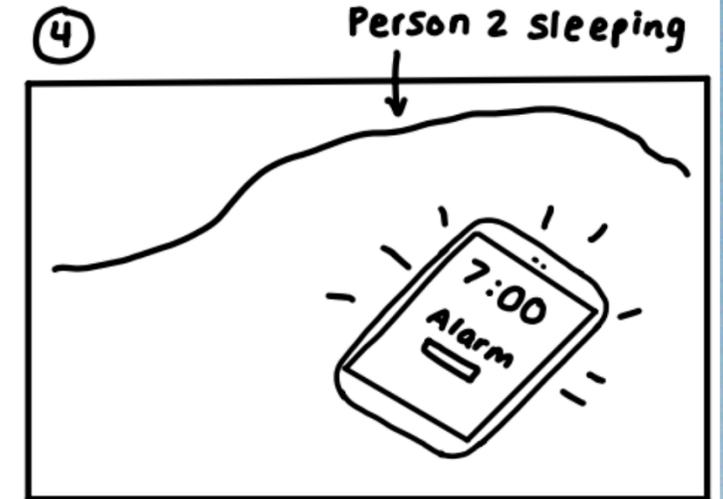

① setting shot of Govco at night

② phone turns off to sleep

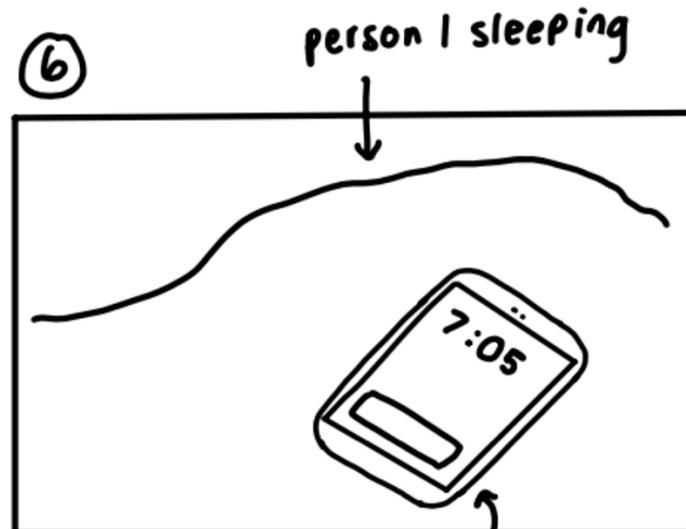

③ setting shot of EVGR in the morning

④ phone alarm goes off

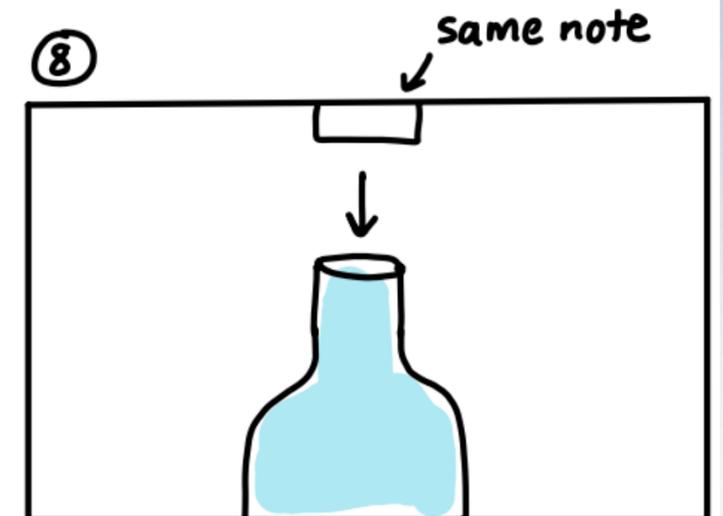

⑤ Person 2 texts Person 1 good morning but gets no reply  
\* zoom in on delivered

⑥ recieves the text from person 2  
\* still asleep, goes unanswered

⑦ note falls out of frame

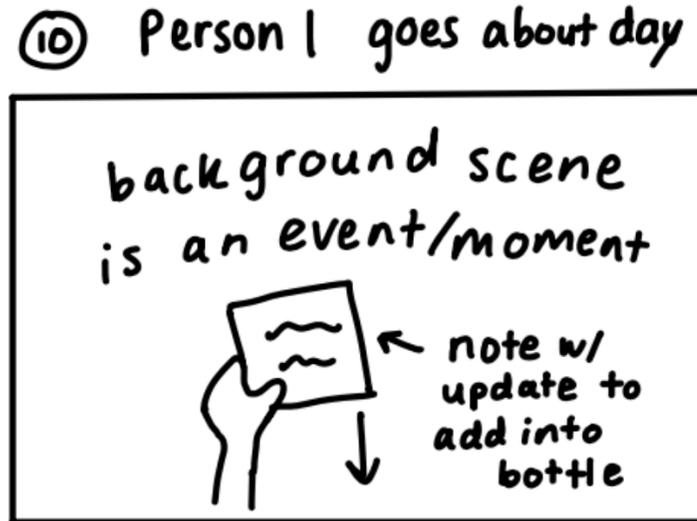

⑧ cuts to frame showing the same note being dropped into a bottle

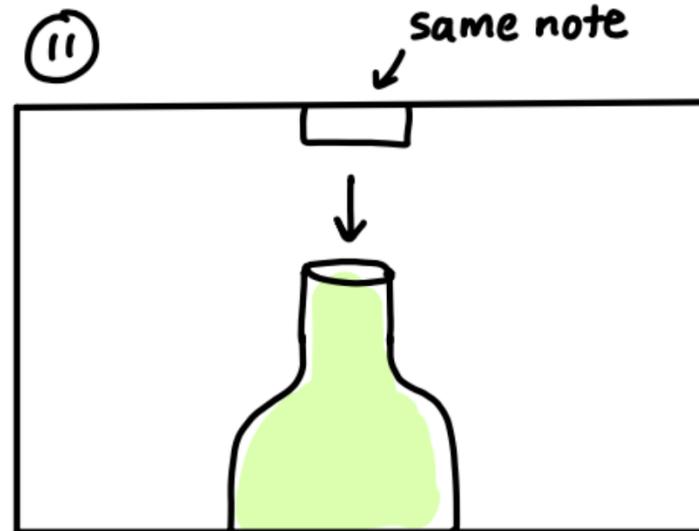

# Storyboard

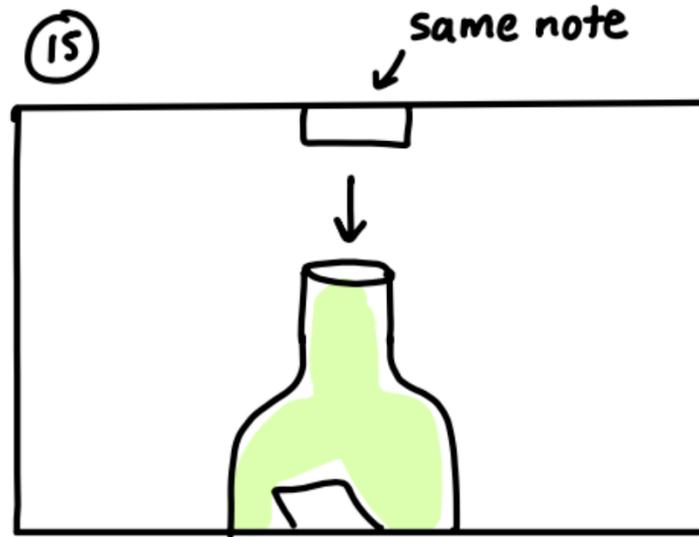

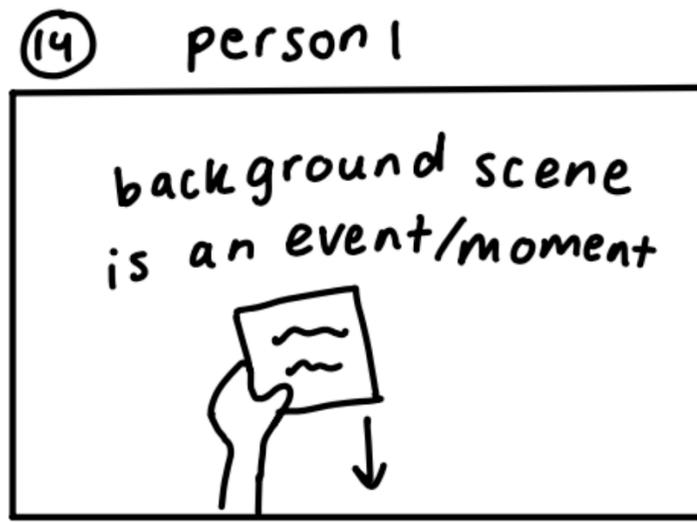

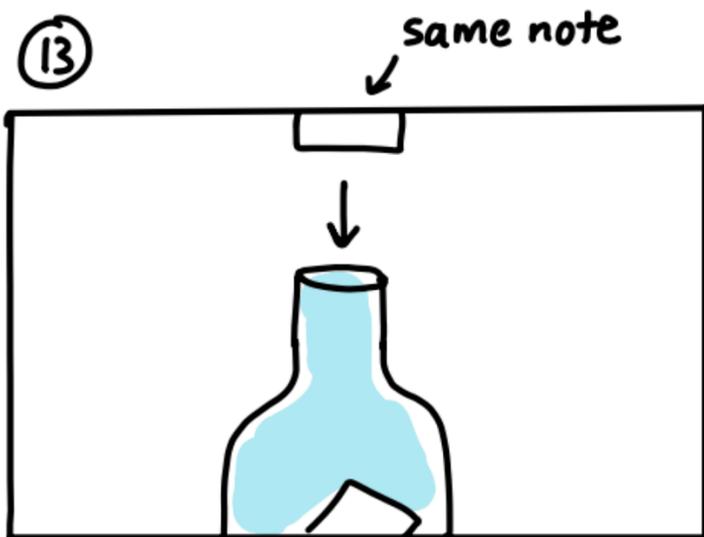

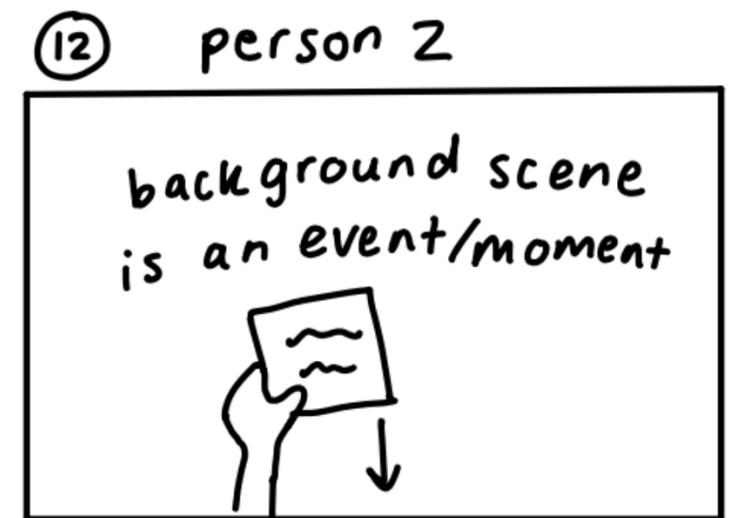

alarm for Person 1 goes off at 1 pm & they wake up

note falls out of frame

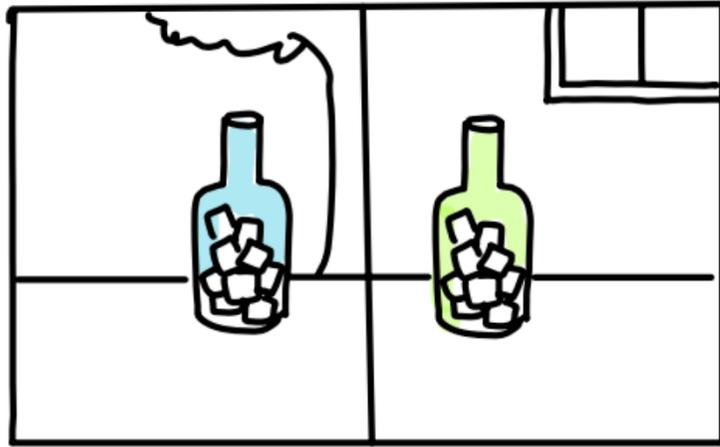

Cuts to frame showing the same note being dropped into a bottle

→ same 2 frames repeat and progress throughout the day

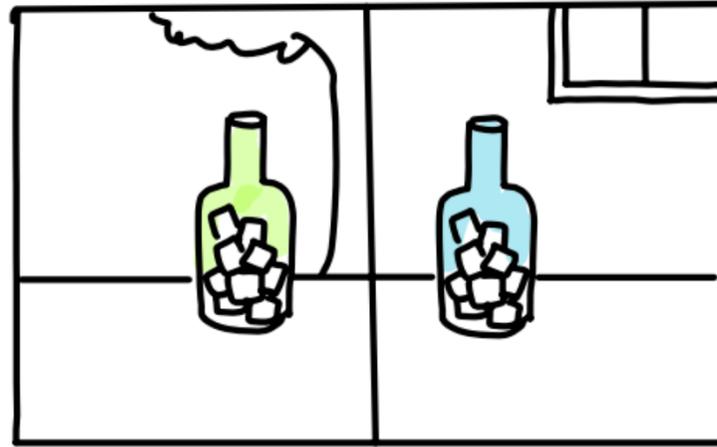

# Storyboard

⑩ at the end of the day

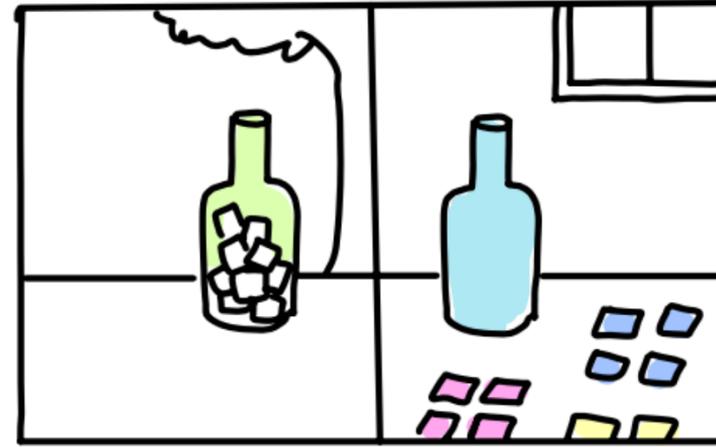

Person 1 + 2 come together  
(different backgrounds to show  
long distance) to share bottle

⑪

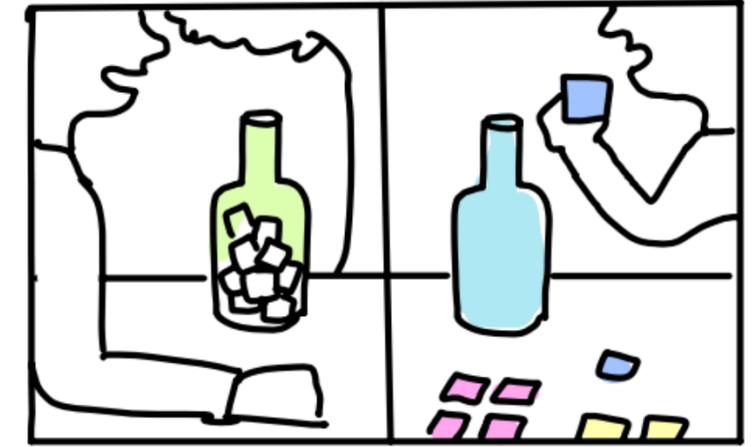

bottles are swapped

⑫

emptying out the bottle  
and then the updates are sorted  
into groups

⑬

both people discussing  
each others updates  
(emojis flash on screen to  
show reactions)

fade to black
