timelock

capture the moment; enjoy the experience

Our user is someone who...

Love

Parties, concerts, large gatherings, conferences, social events, a fun night out.

Wants

To be present, but also wants to have something to remember an event by.

Needs

Capture a holistic sense of the event, from music to decorations to locations.

The Problem

The need to be present, but also have something to remember the night by.

Sharing and aggregating media aesthetically across large groups .

An easy way for groups to capture and share meaningful memories all in one place.

The Solution

Collaborative app designed to create a time-sensitive multimedia experience for groups

Participants contribute various forms of content, such as photos, videos, voice recordings, songs, locations, and messages, within a specified time-frame

all contributions are compiled into a single, shareable memento that captures the essence of the moment for all participants

Outline of Presentation

- 1) Sketching Explorations*
- 2) Refined Realizations*
- 3) Choosing a Realization*
- 4) Lowfi-Prototype Construction and Features*
- 5) Paper Prototype Testing*
- 6) Results and Implications*

Exploring Concept Sketches

Timed Submission Alerts:

- *Participants have specified times to submit media to a timelock*
- *Notification when they can submit media*

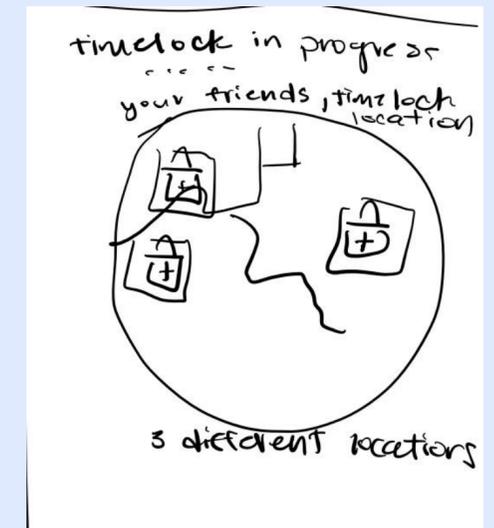

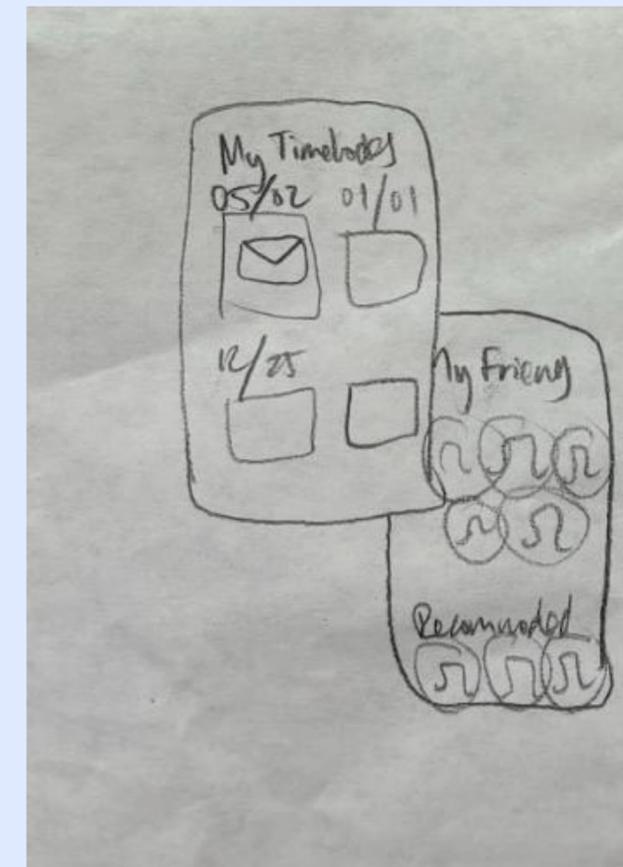

Timelock Stats:

- *timelock shows “stats” (ie amount of each type of media submitted)*

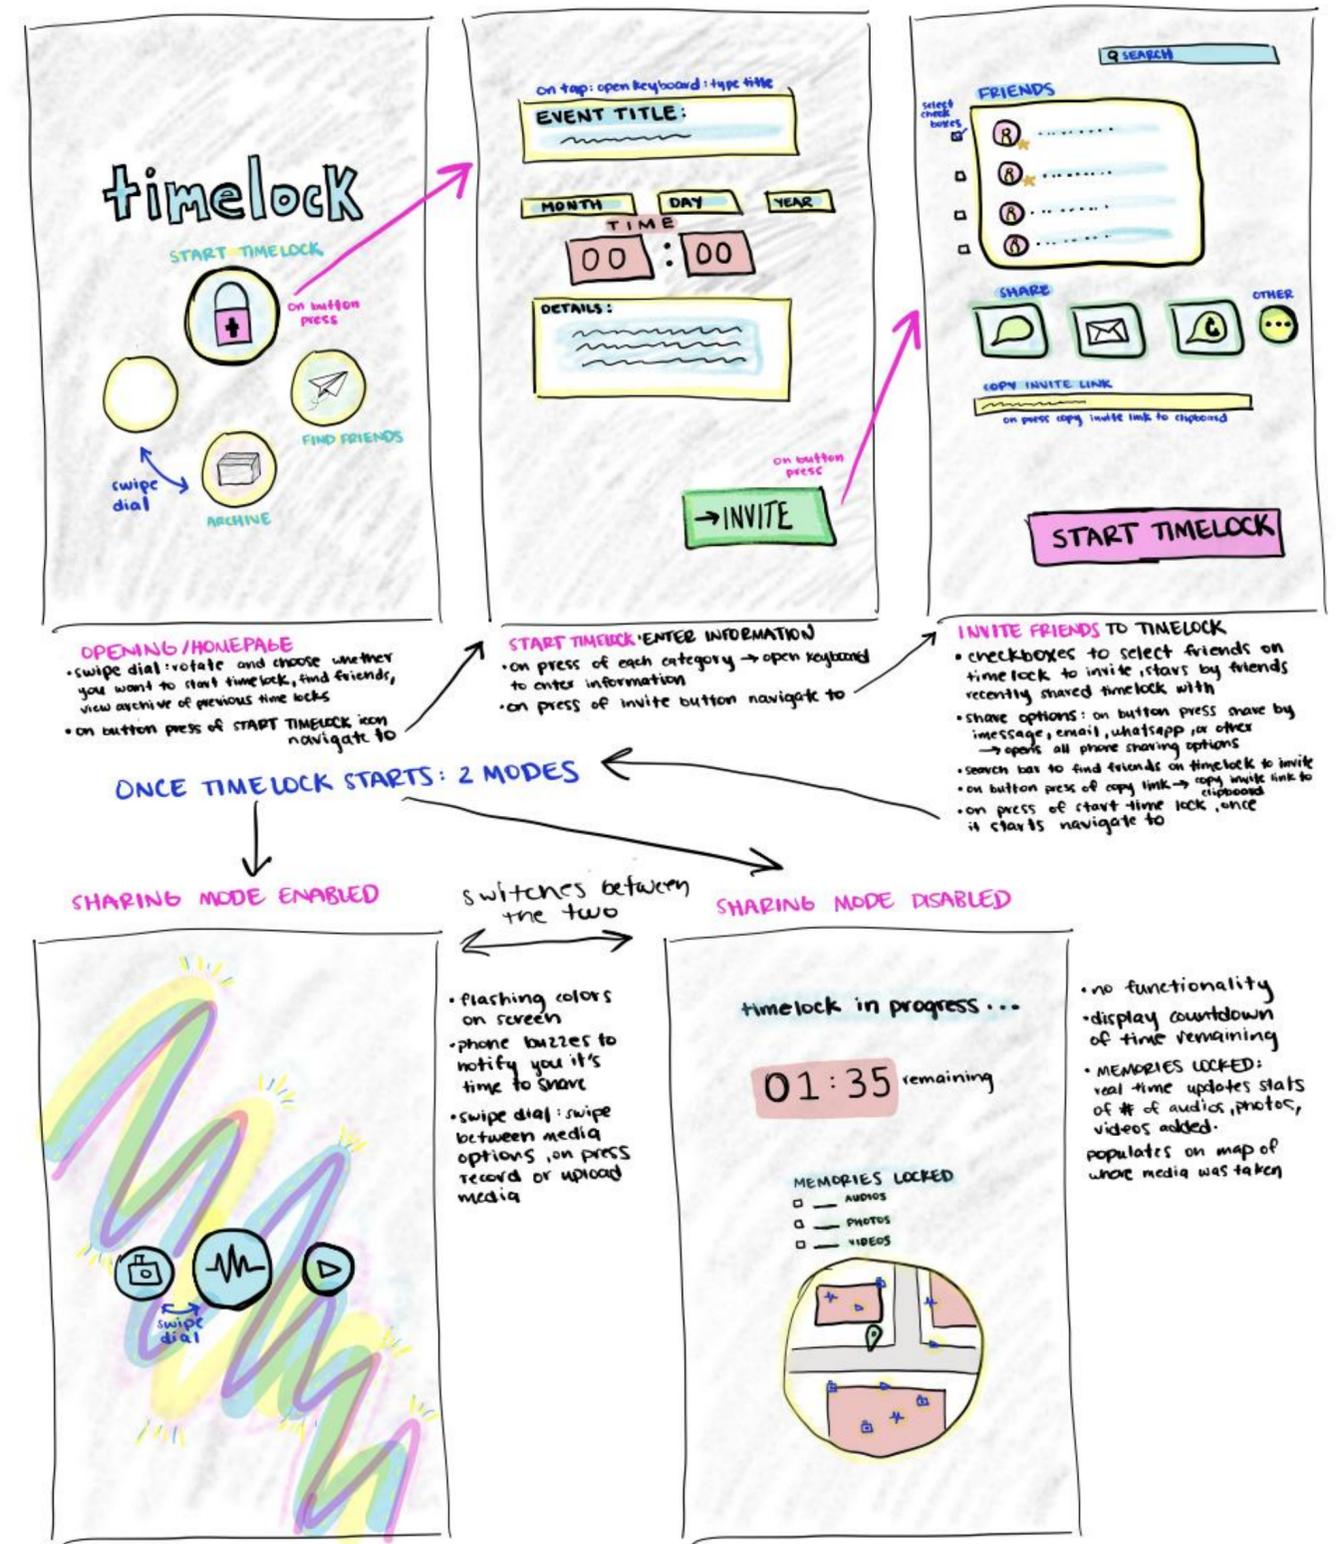

Sharing Functionality:

- *easily share timelocks after an event concludes*

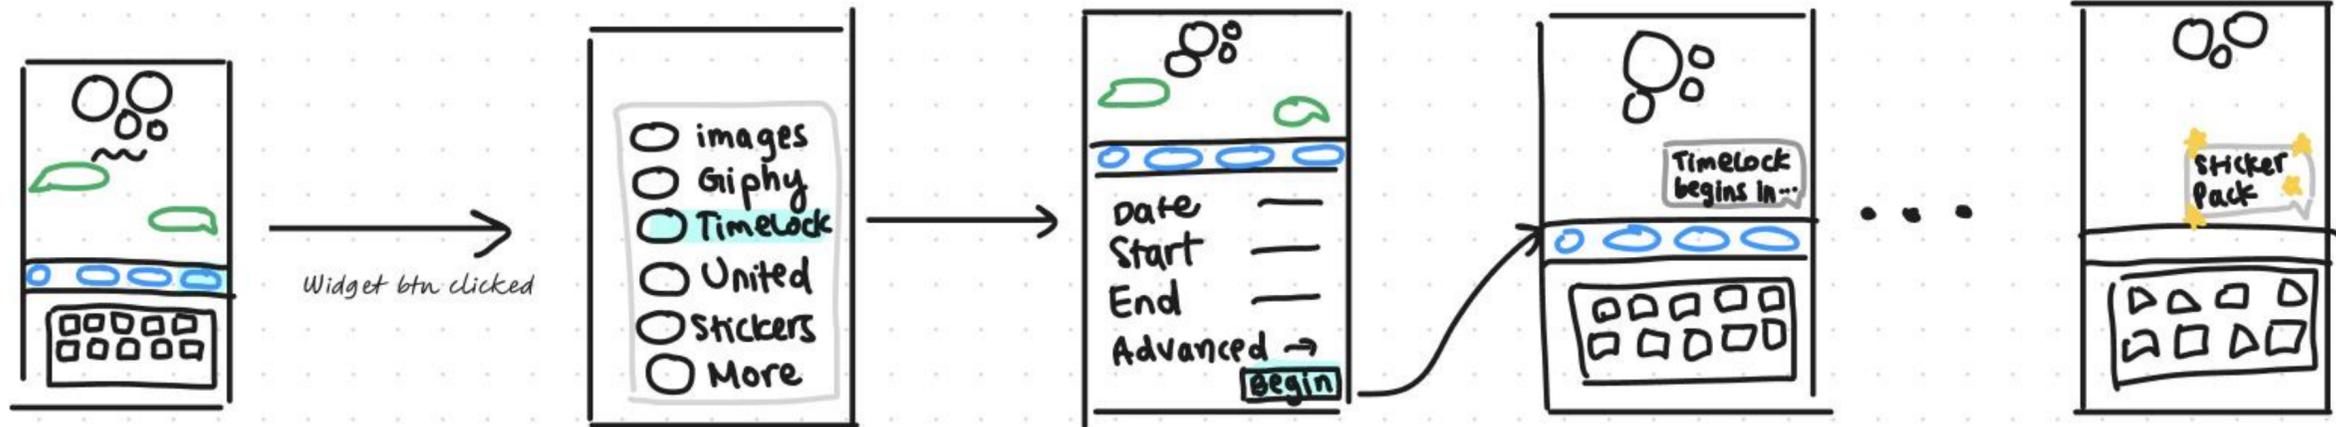

Refined Realizations

Mobile App

iMessage Widget

Screens: iMessage Widget

Create a group chat in iMessage for an event/party.

Click the widgets button on the top of the iPhone keyboard within your group chat. This should pop-up a hover menu with all of the user's widgets. Then, click the 'TimeLock' widget.

When the TimeLock widget opens, you will see the options of selecting a date for the timelock, a start time for the timelock, and an end time for the timelock. There is also advanced settings that a user can navigate into (if they want more specificity on when to send notifications to each individual within the timelock)

Once the user has inputted all the parameters for initializing a timelock, the widget will send a text on behalf of the host to all of the people within the group chat. The message will show that a TimeLock has been created and a neat countdown until the TimeLock opens.

Fast forward, once a timelock is finished, timelock will send a stickerpack of all the media that was submitted from the event.

Choosing a Realization

iMessage Widget

Pros:

Enhances Existing User Behavior:

- Integrates seamlessly with common social practices (group chats with friends)

Focused Interface:

- Small, streamlined design highlights the importance of group interaction.
- Reduces distractions, allowing for a more engaging media-sharing experience.

Cons:

- **Not cross-platform:** iMessage only.
- **Small interface:** This design requires leaning into messaging native artifacts and design choices (e.g., texting notifications).
- **Only certain demographics enjoy using widgets:** This limits overall use.

Mobile App

Pros:

- Cross platform, not Apple specific.
- More opportunities for creative designs around multi-media artifacts.
- Versatile invitation format (text, send link, invite via app) vs. text only.

Cons:

- Requires download on the part of all users.
- Adds a layer of complexity by bringing user out of their common medium of communication with friends (e.g., text).

Rationale: Choosing Mobile App

iMessage widget: integrates into an existing flow where users are already engaging with their friends during events

Mobile App: can be cross platform and expands our design space for interesting multi-media outputs.

Only ~26% of smart phone users are iPhone users

What about interactive outputs? Timelines?

Reddit commentary...

There's a reason you can't find many tutorials for doing that. Apple has basically abandoned iMessage apps, as have most developers.

You might want to look at doing something else instead of a standalone iMessage app.

Damn

Lowfi-Prototype

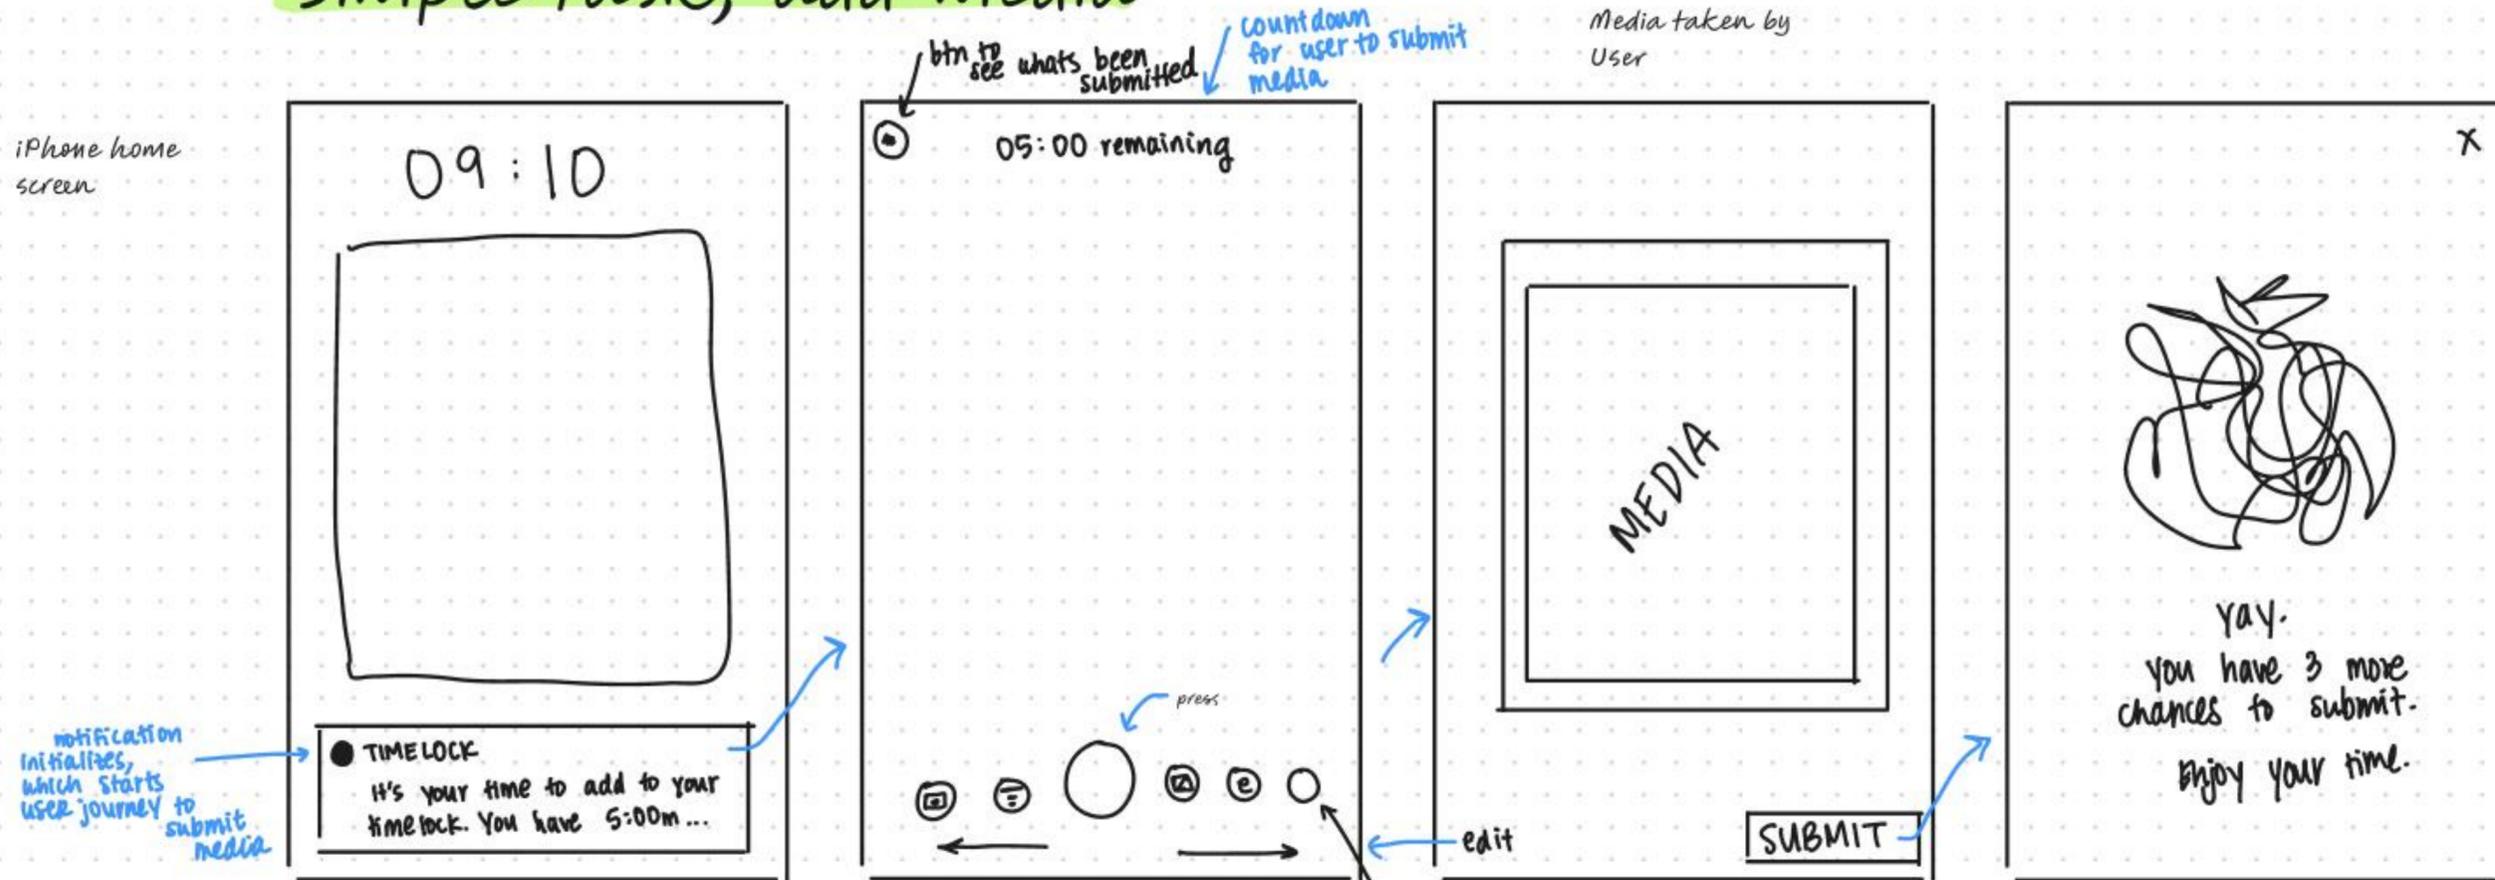

Low-Fi Prototype: 3 Task Flows

Simple

TODAY'S DATE

PROJECT NAME

Simple task; add media

User is sent a push-notification when it's their time to submit to the timelock. It will show a countdown for the remaining time it will take to submit media.

User is immediately brought to Camera interface where they can swipe to pick which type of media they want to submit. Text, audio, video, photo, emoji.

Once they select which media, the screen state will change to reflect the media type being captured.

take from camera roll

This screen shows the user the media they have taken. If they want to submit it to the timelock, they can press the submit button. Otherwise, they can edit their submission, so long as the timer hasn't run out.

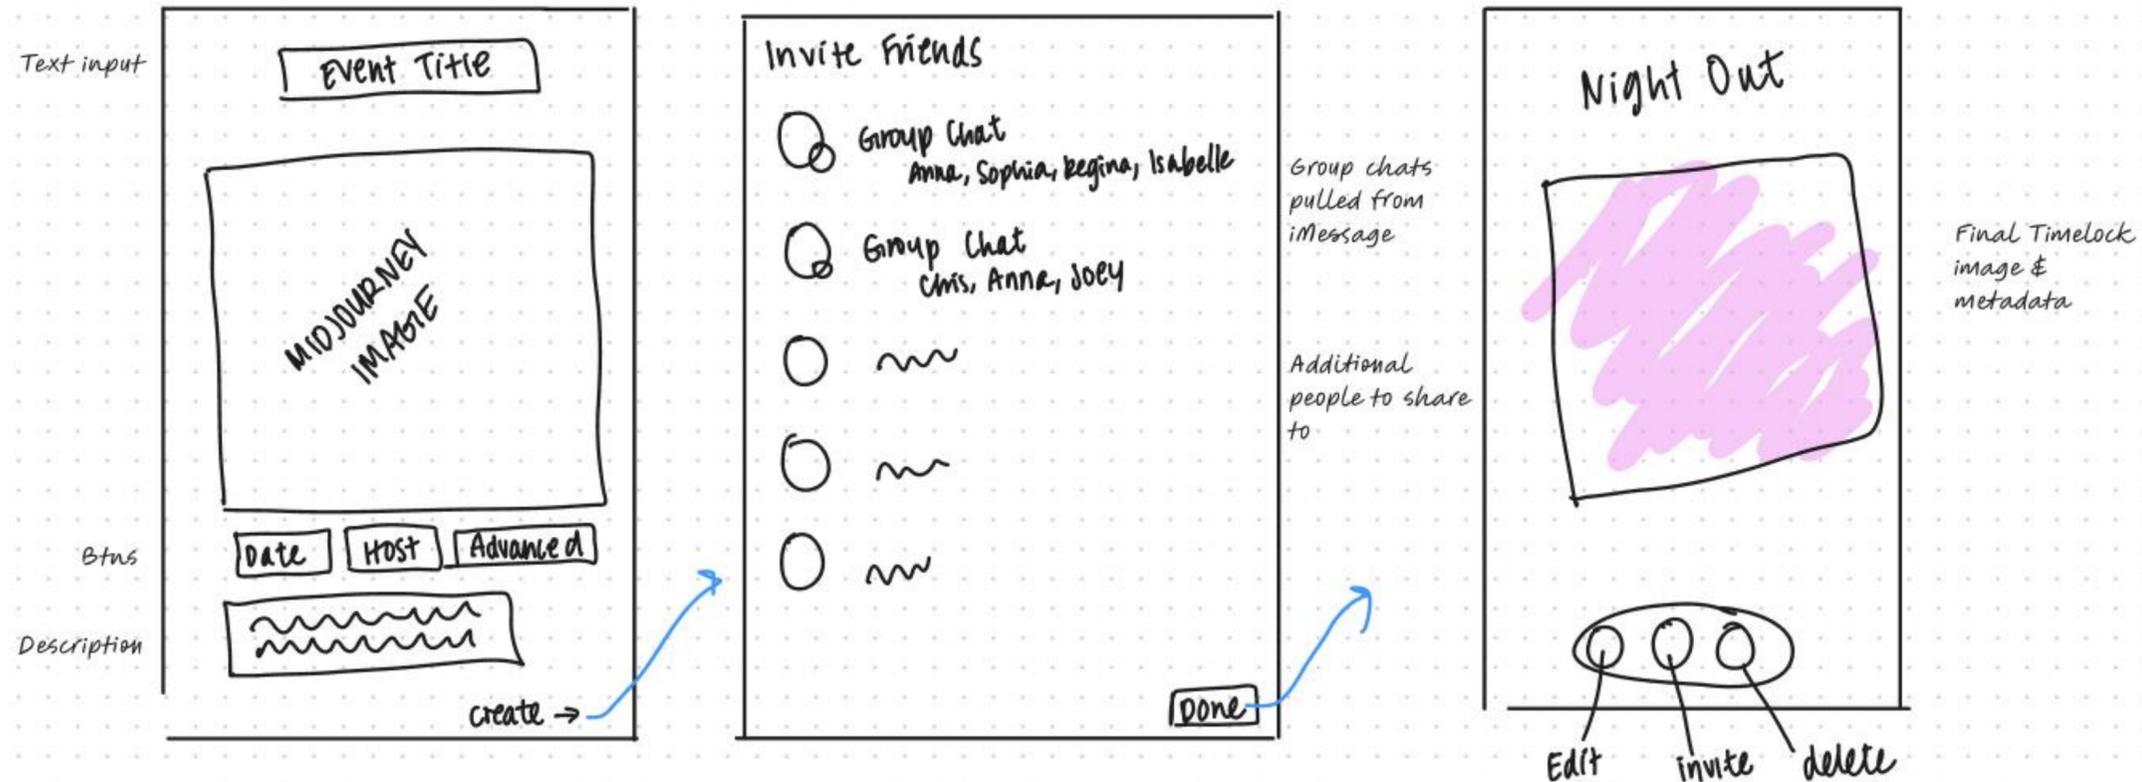

Then, a success screen is shown to the user after they submit a piece of media. A user can cancel out of this.

Moderate

TODAY'S DATE

PROJECT NAME

Moderate task; starting a timelock event

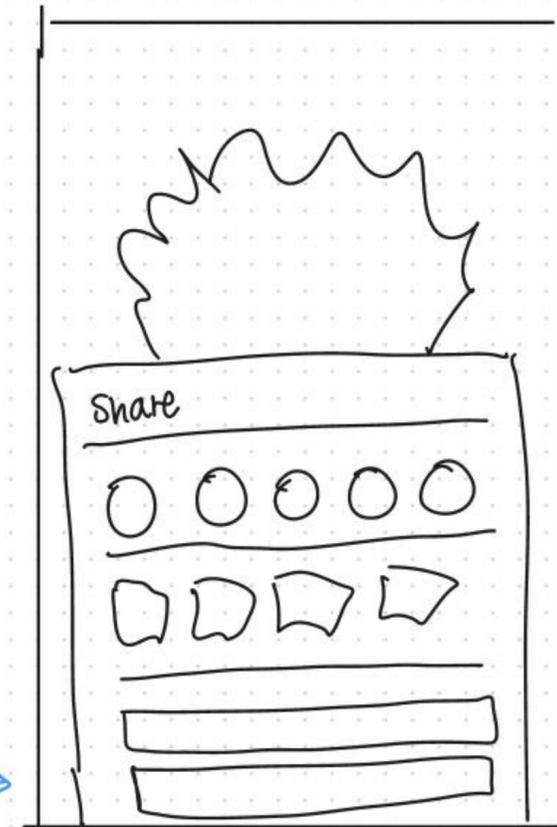

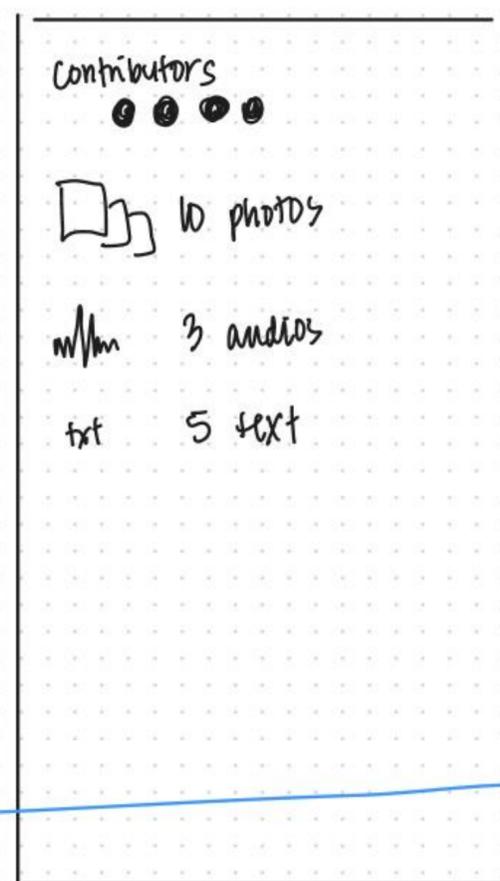

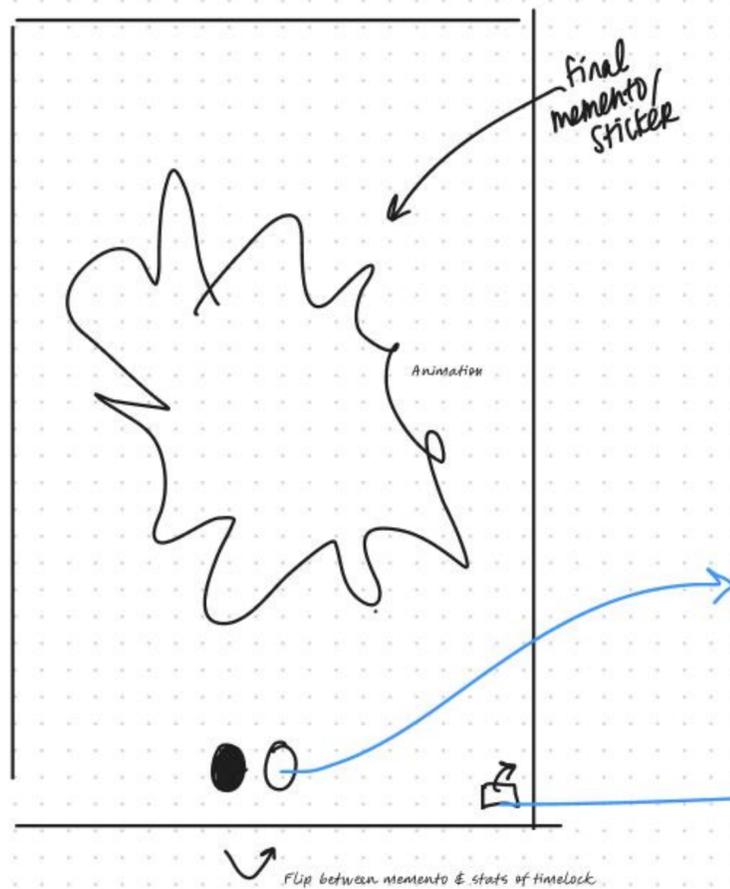

User can start a timelock event, where they enter the event title, a MidJourney image is created based on the text of the event title, enter date, see host information, and then navigate to host settings, if they desire. User can also enter a description. Once they are happy with their timelock information, they can officially create a timelock event.

After creating the timelock event, the host can invite friends to the timelock. They can pull their iMessage group chats or individual people.

Now that the timelock has been created, it will show the finished version of the MidJourney screen. Then, the user has the option to edit the details of the timelock, invite more friends, or delete the timelock.

Complex

Complex task; sharing a timelock event

User swipes down to get rid of hover menu

This is the end state of a finished timelock. The user can flip between the timelock generated "memento" or they can view all the media in a timeline view (different screen not showed here). There is also a shared button.

The user can also look at the media submitted by the numbers, which shows the aggregate of all the media put into the timelock by media type.

When the user clicks the share button, a hover menu pops-up which shows all the sharing options. Text to friends, share to different apps, or add to files within iPhone.

OCT 10, 2024

Our Paper Prototype

PRESENT

Our prototype included three main tasks:

Moderate Task (Step 1)

Create a timelock event and share it with a friend.

Requires inputting text.

Simple Task (Step 2)

Add a piece of media to an existing timelock.

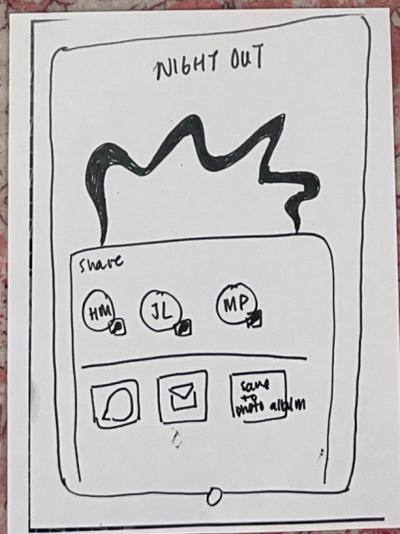

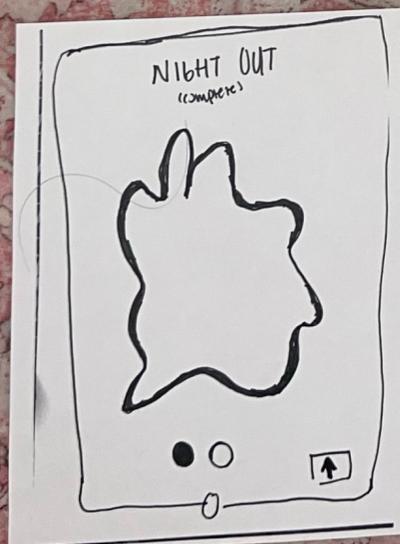

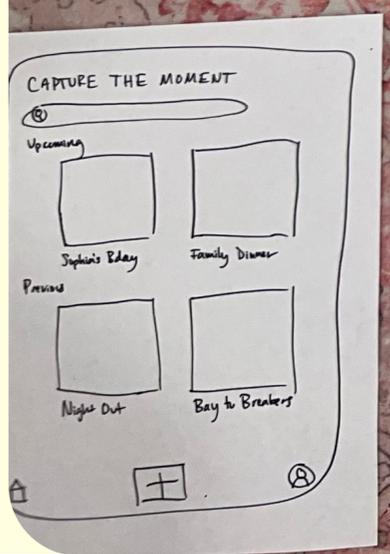

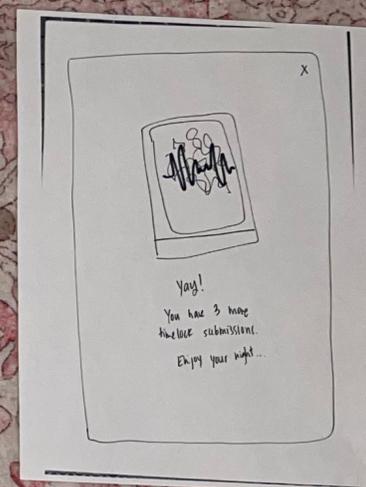

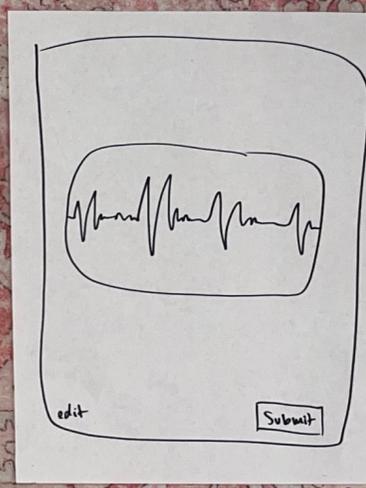

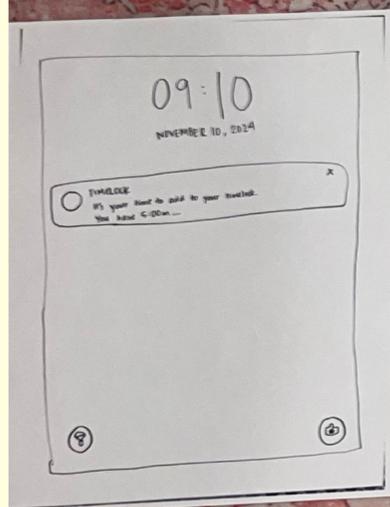

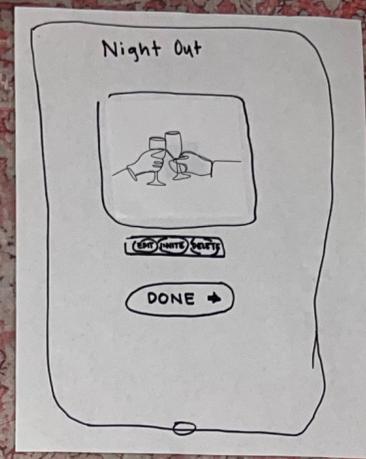

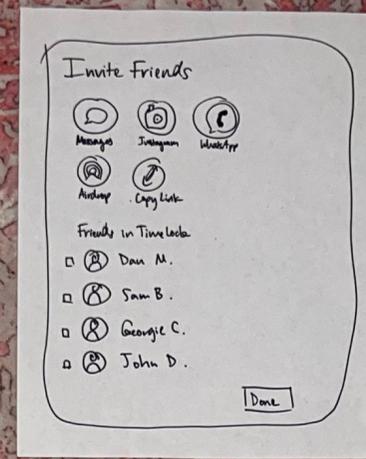

Requires taking a photo.

Complex Task (Step 3)

Share a timelock with an (external) friend.

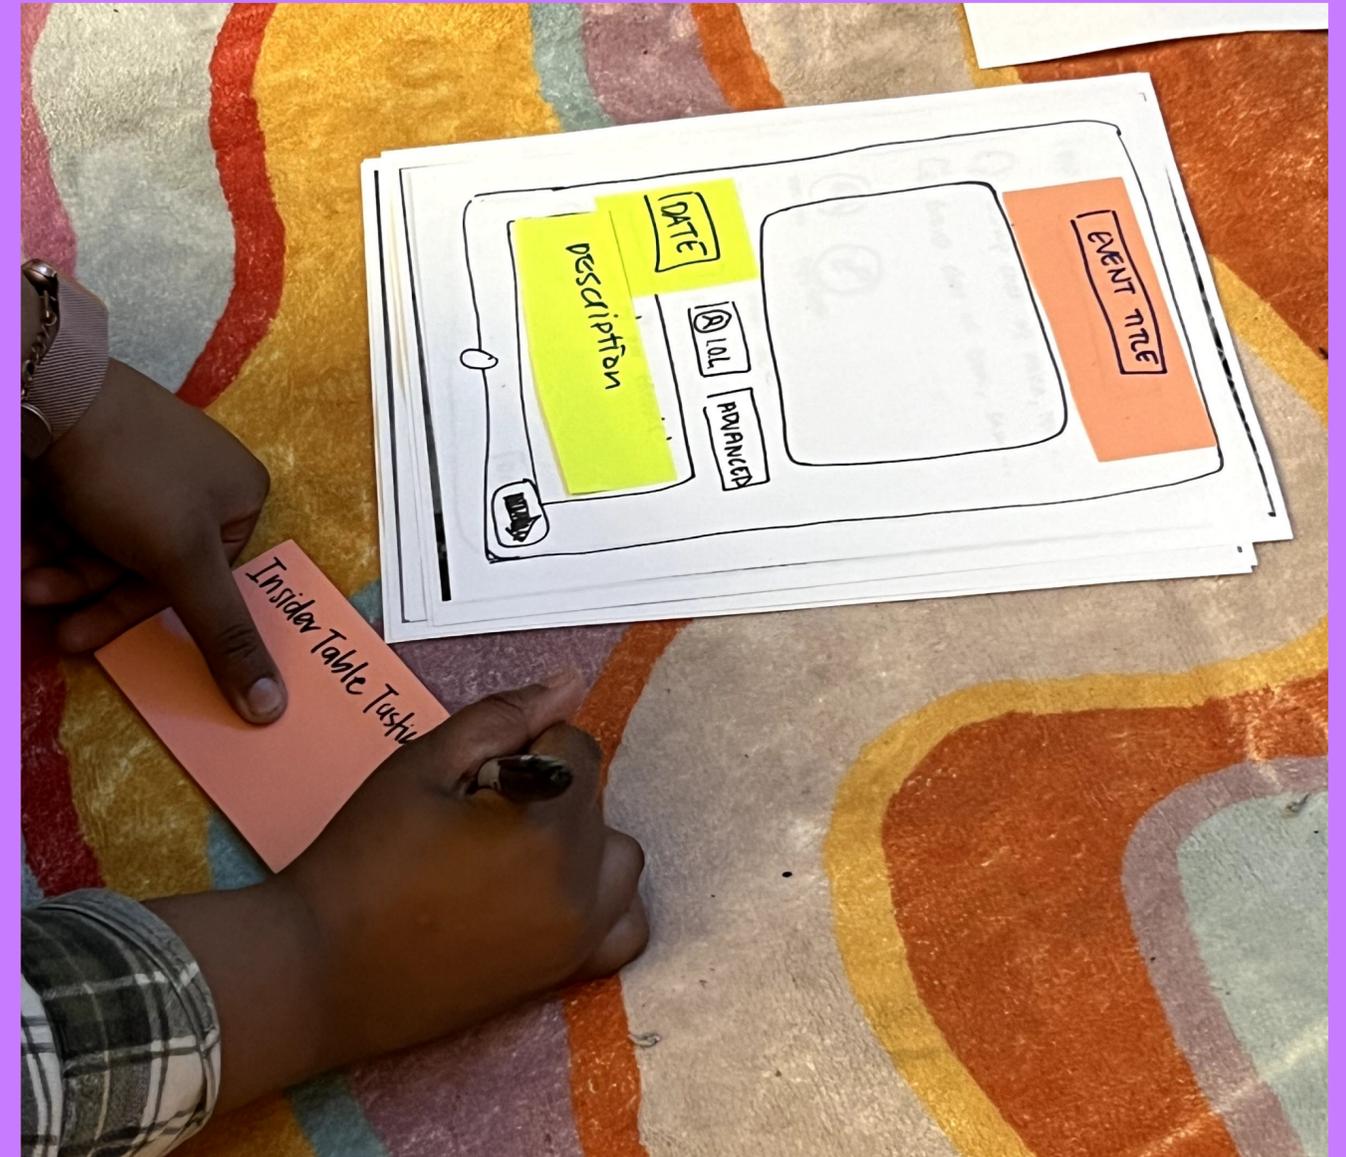

Requires sharing.

Inputting text

For areas of the prototype where you could input text, we provided sticky notes and the instruction:

“When you see a sticky note...”

Taking a photograph

To prototype “taking a photo” that you then “submit to the timelock” we cut out a square in the middle of the screen of our prototype. We provided the instruction:

“XYZ”

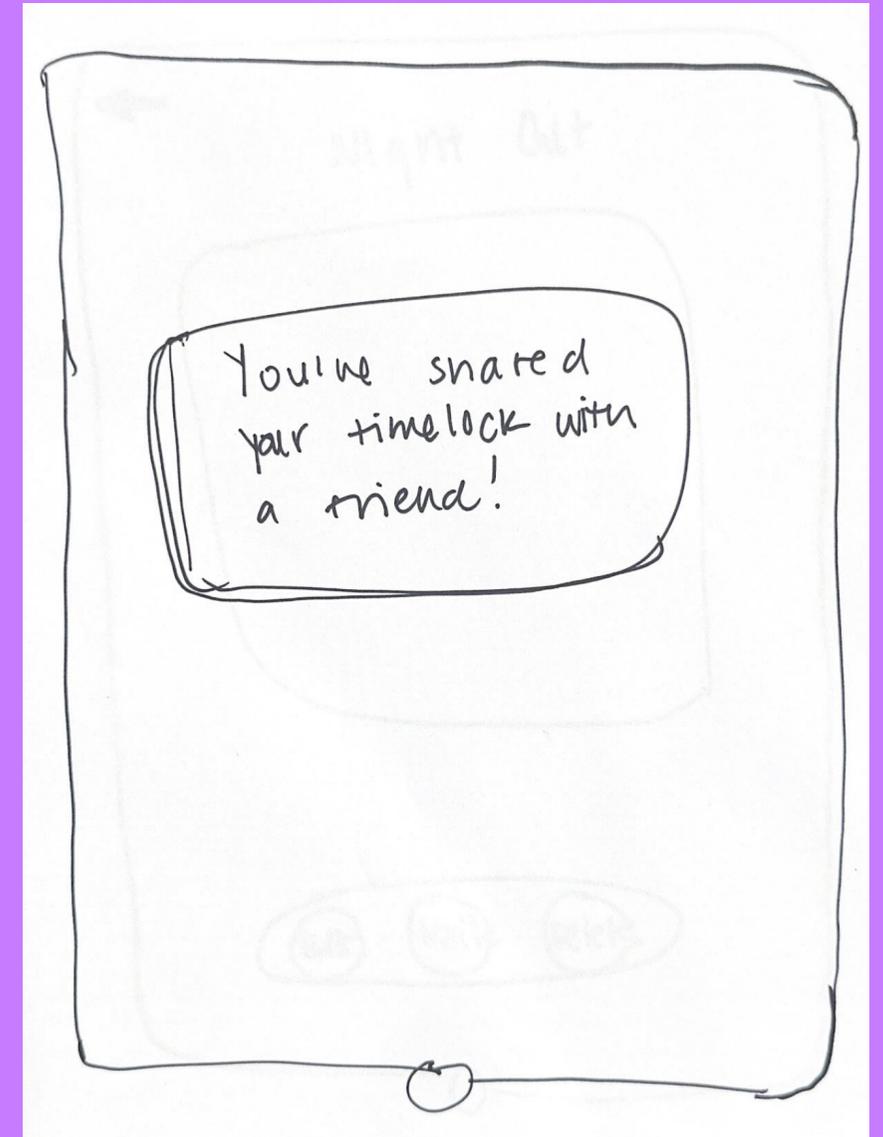

Sharing with friends

Our initial prototype required a user to walk through a fake iMessage sharing flow. To simplify this complex UI, we mimicked sharing by having a user press one button and then receive a success message “you’ve shared X with Y.”

FINAL

Testing Our Paper Prototype

Finding Participants: Target Demographic

What demographics are relevant to timelock?

What demographics would value timelock?

Participants

Trisha

mid 20s, content creator, large event host for brands and apps

Kevin

early 20s, SJSU student, takes photos socially

Vicky

early 20s, Stanford student, takes photos socially and hosts medium sized social events

Hazel

early 20s, USF student, takes photos socially and hosts small/casual social events

Compensation: sour patch kids

Recruitment: Tresidder & Downtown PA

Environment, Apparatus, and Roles

4 In-Person, Paper Prototypes

CONSTRUCTOR

CONSTRUCTOR

NOTETAKER

Testing Procedure and Design Iterations

Usability Goals

Learnable: ease of first time use

Many users may download timelock immediately prior to an event

Pleasant: easy and Fun to use

Essential to ensure users continue to use timelock

Usability Goals: **Key Measurements**

Learnable: Ease of first
time use

- Relative time it takes for users to complete each task
- Whether or not users successfully completing the task
- Users minimally running into “dead ends”

Usability Goals:

Key Measurements

Pleasing: easy and fun to use

- Users enjoy engaging with features
- Verbally assessing user satisfaction after testing
- Verbally assessing if users would use again and/or recommend to friends

Testing Iteration 1

Testing Iteration 1: Immediate Problems

Confusion and User Navigation:

Both participants experienced instances of **confusion** (e.g., navigation loops, unclear icons)

users encountered “**dead ends**,” affecting overall usability

Feature Enhancements:

Participants expressed a **desire for additional features** (mood tags, captions, and sharing options)

Key Goal in Refining Paper Prototype:

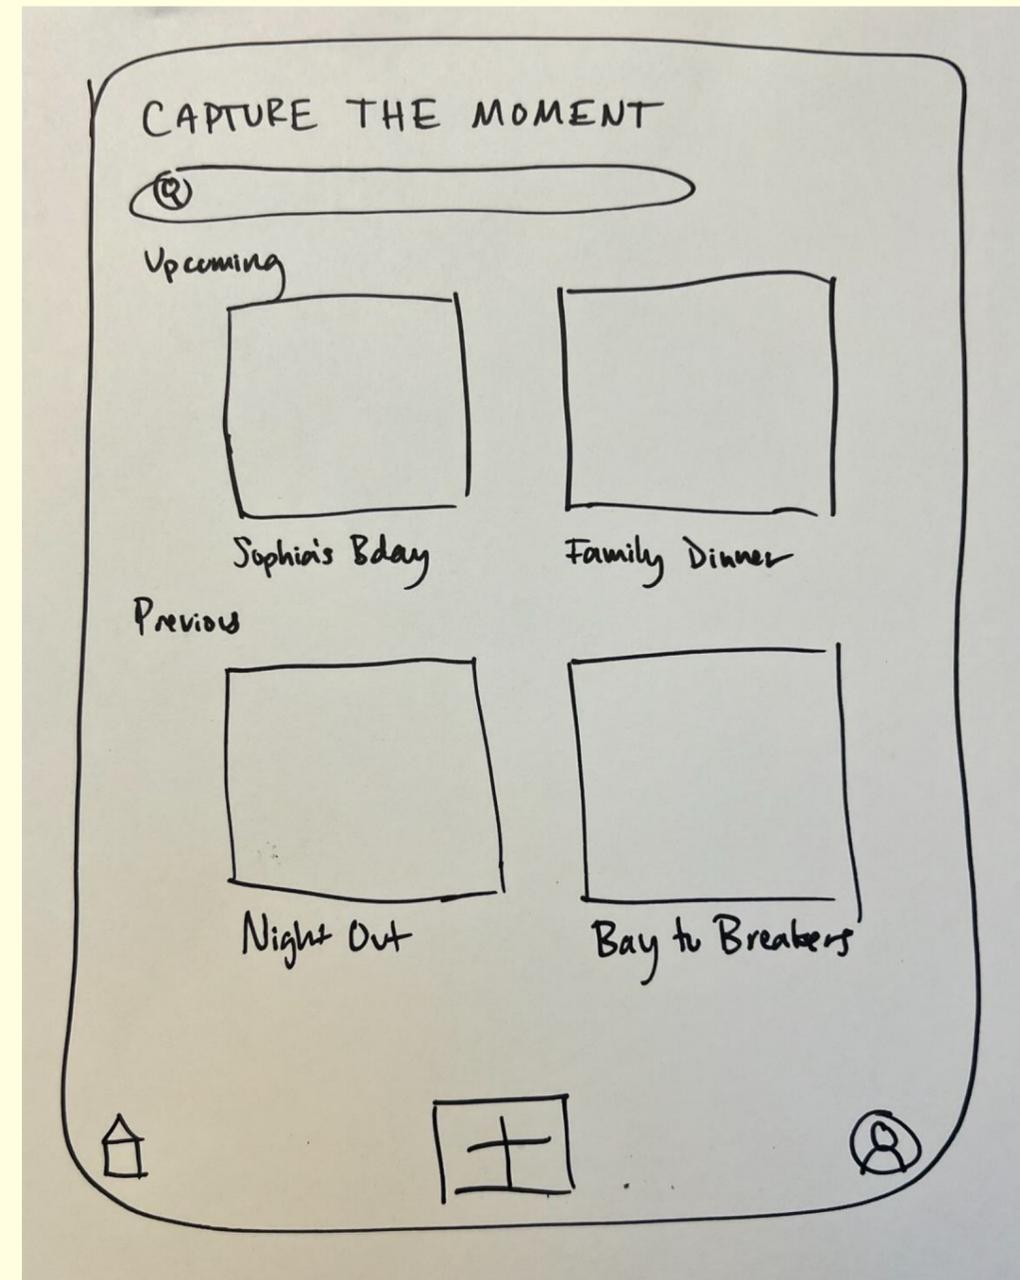

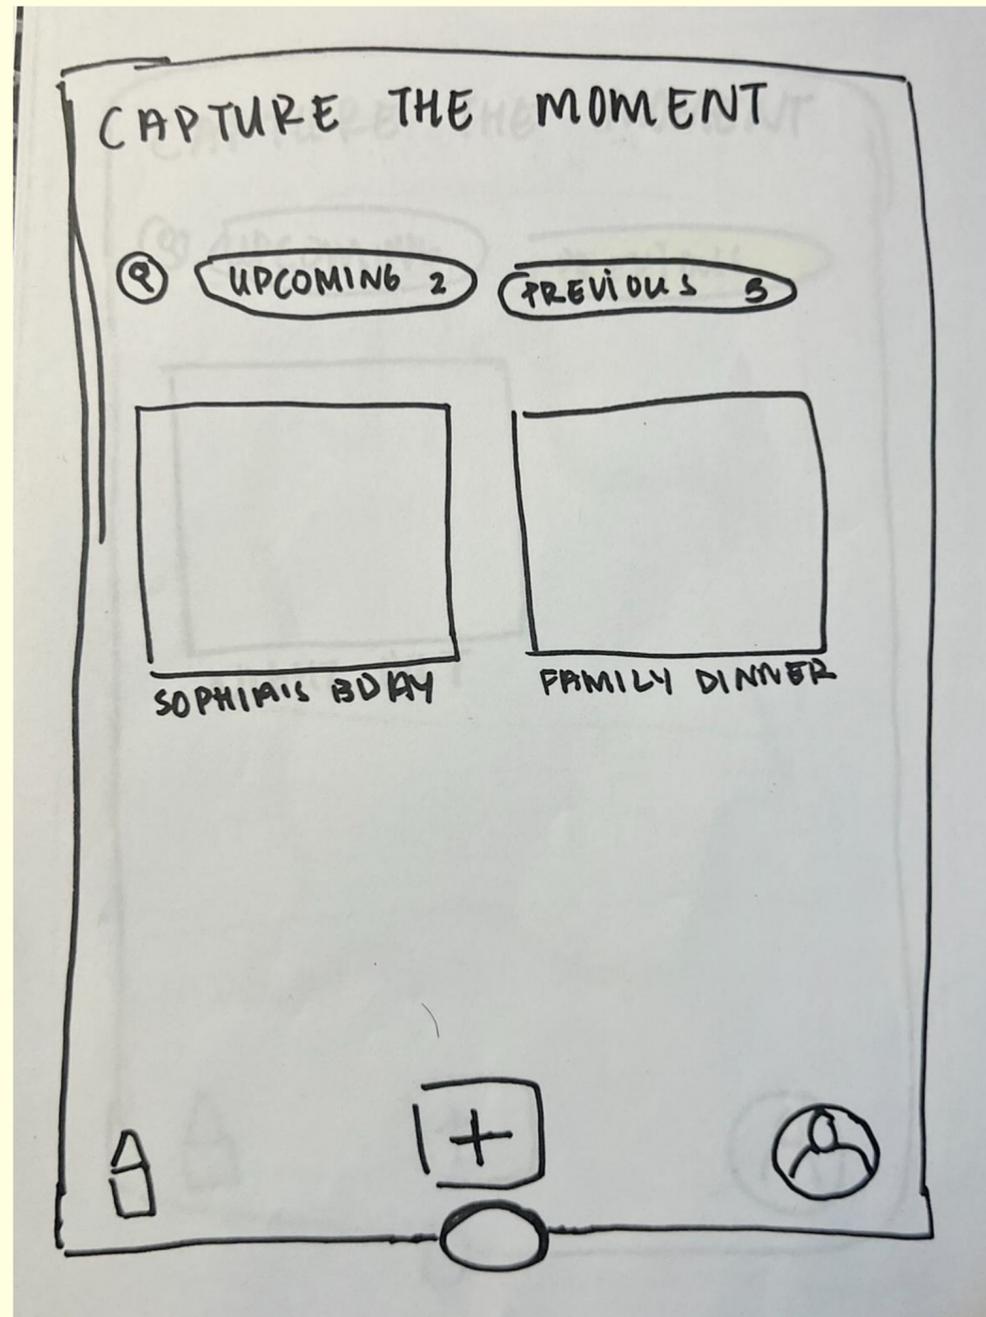

Navigation Issues: not meeting important usability goal

Learnable: Ease of first time use

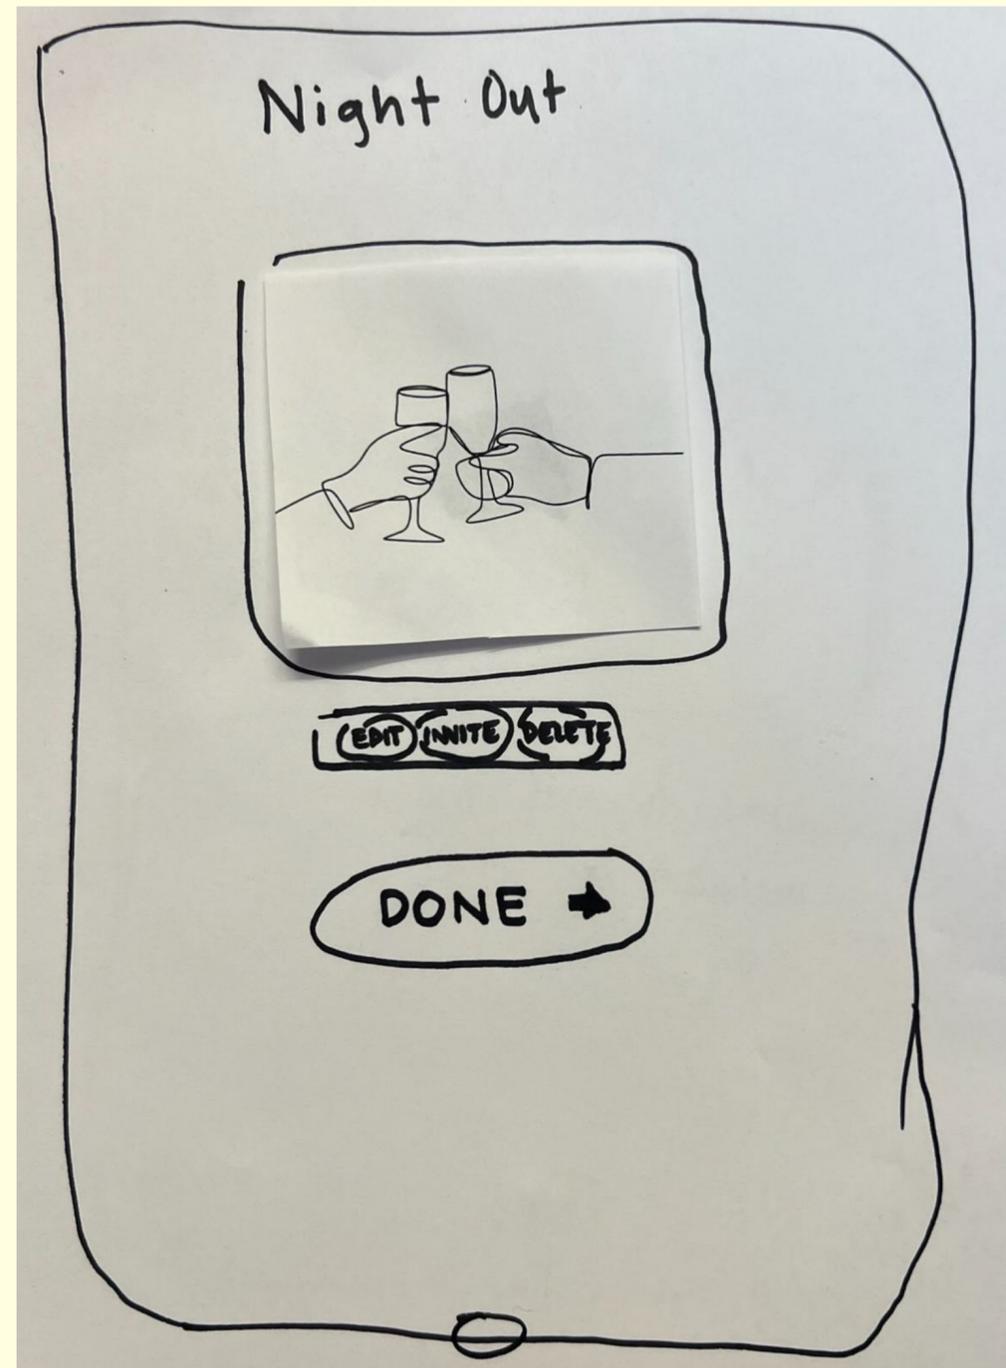

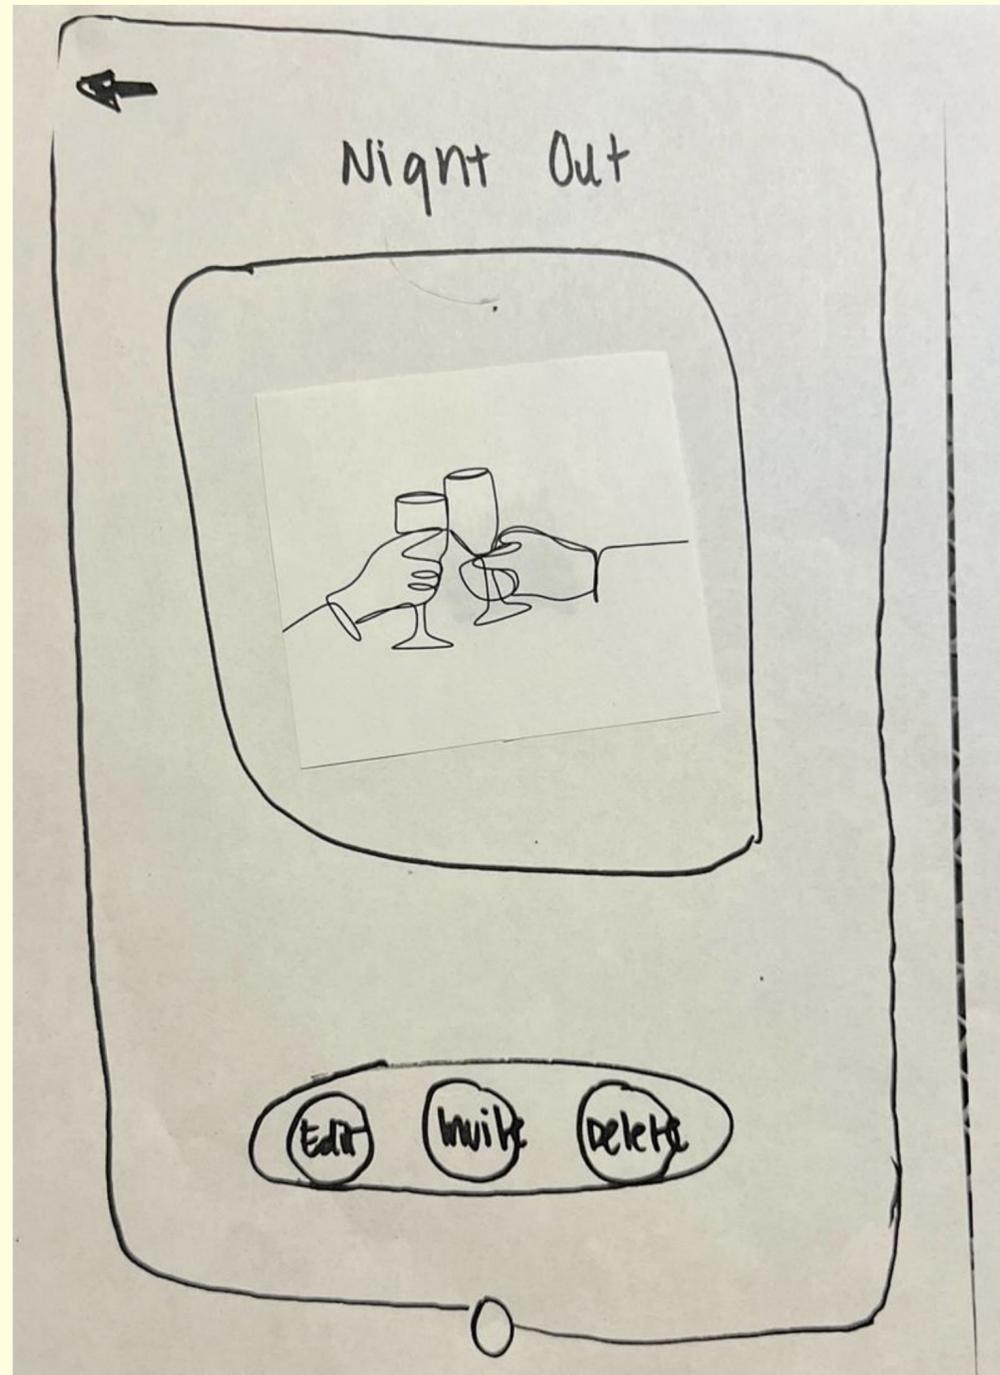

Based on User Feedback:

- remove “dead ends”
- eliminate confusing interface elements

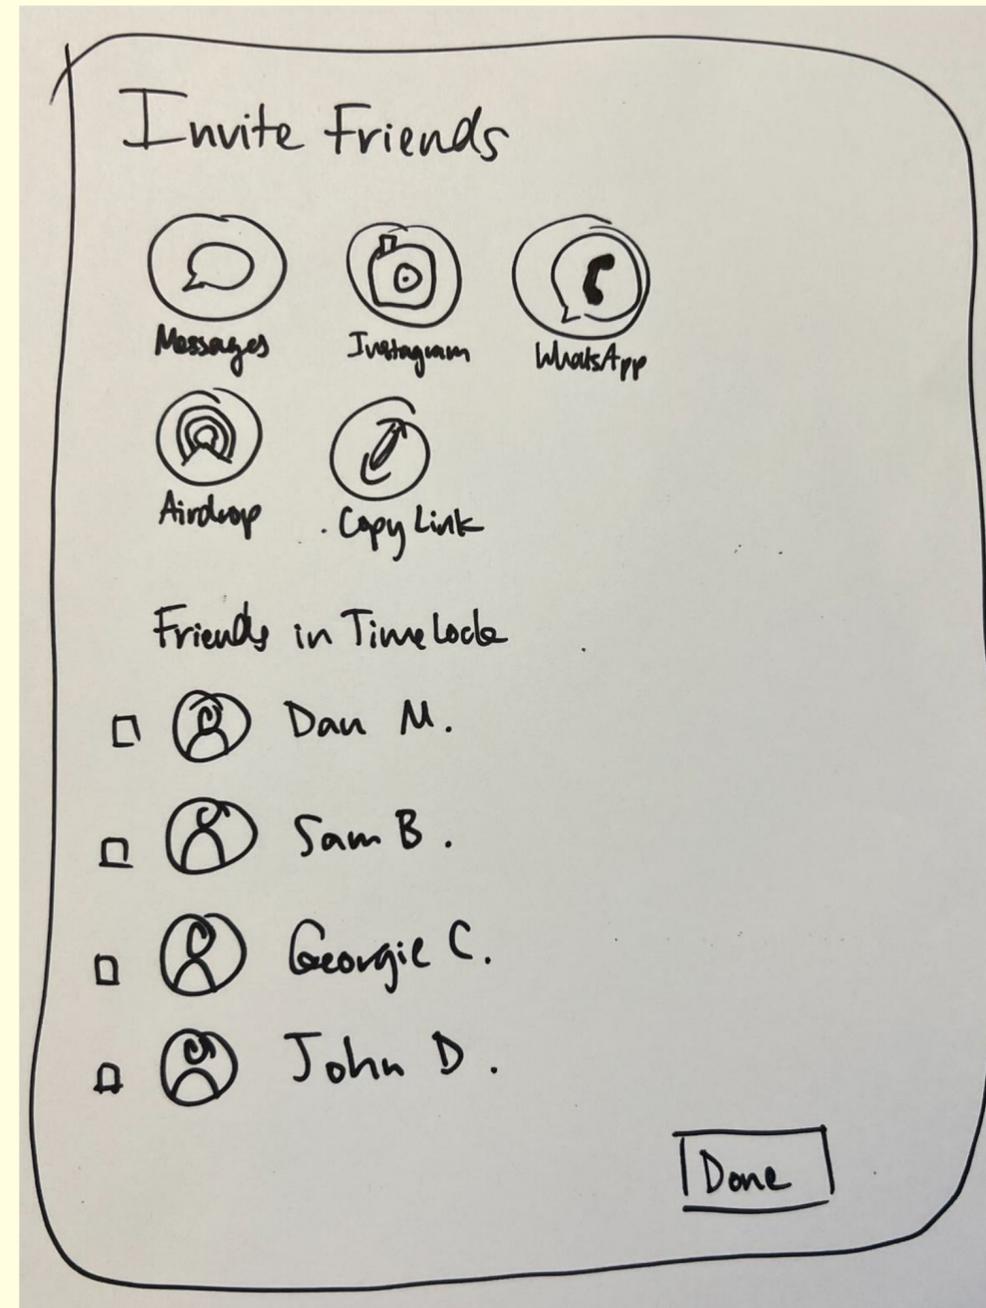

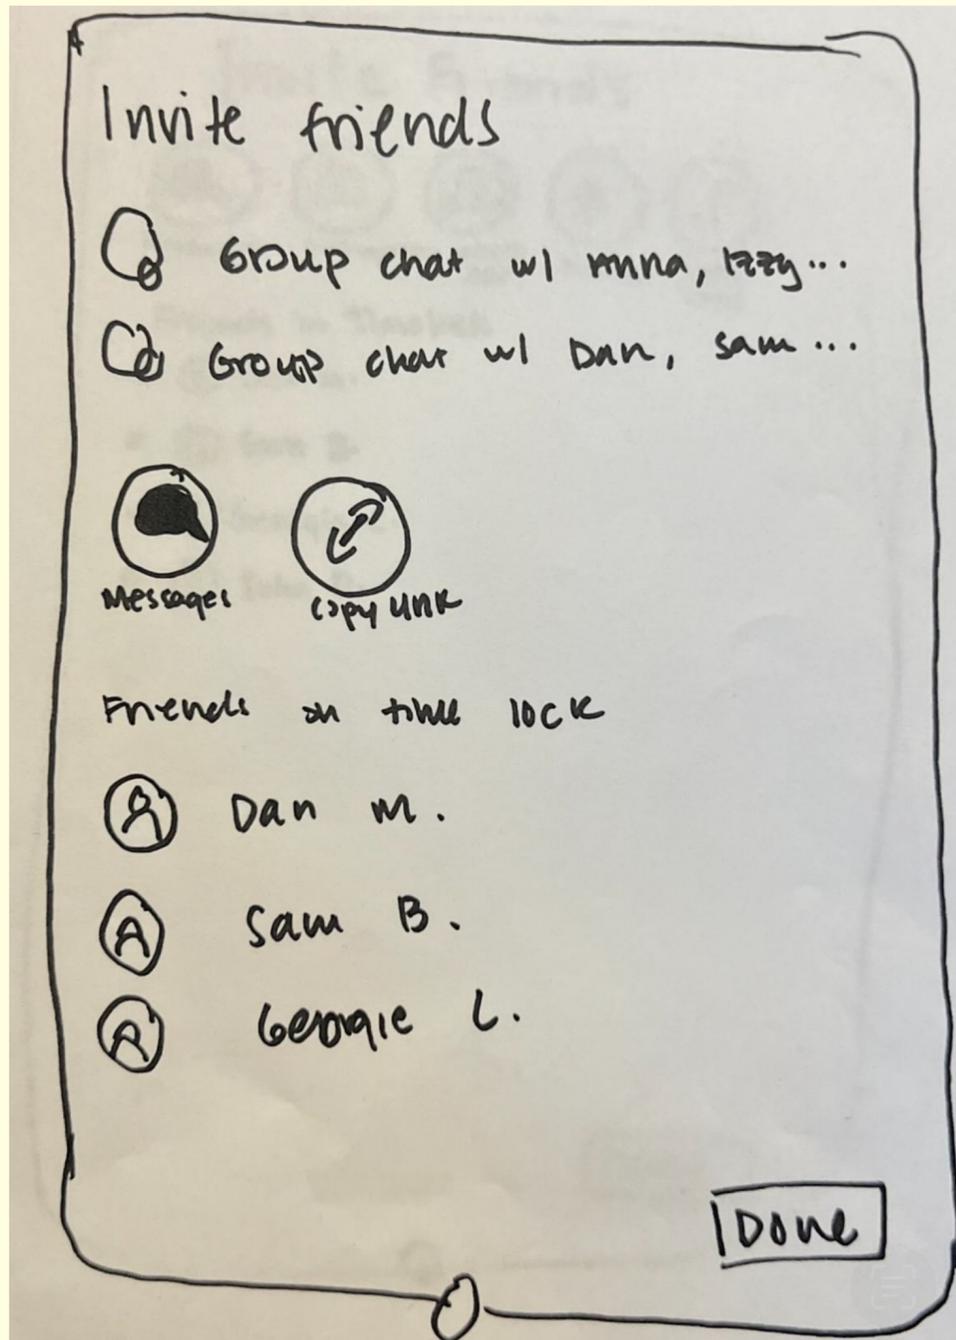

Home Page Layout

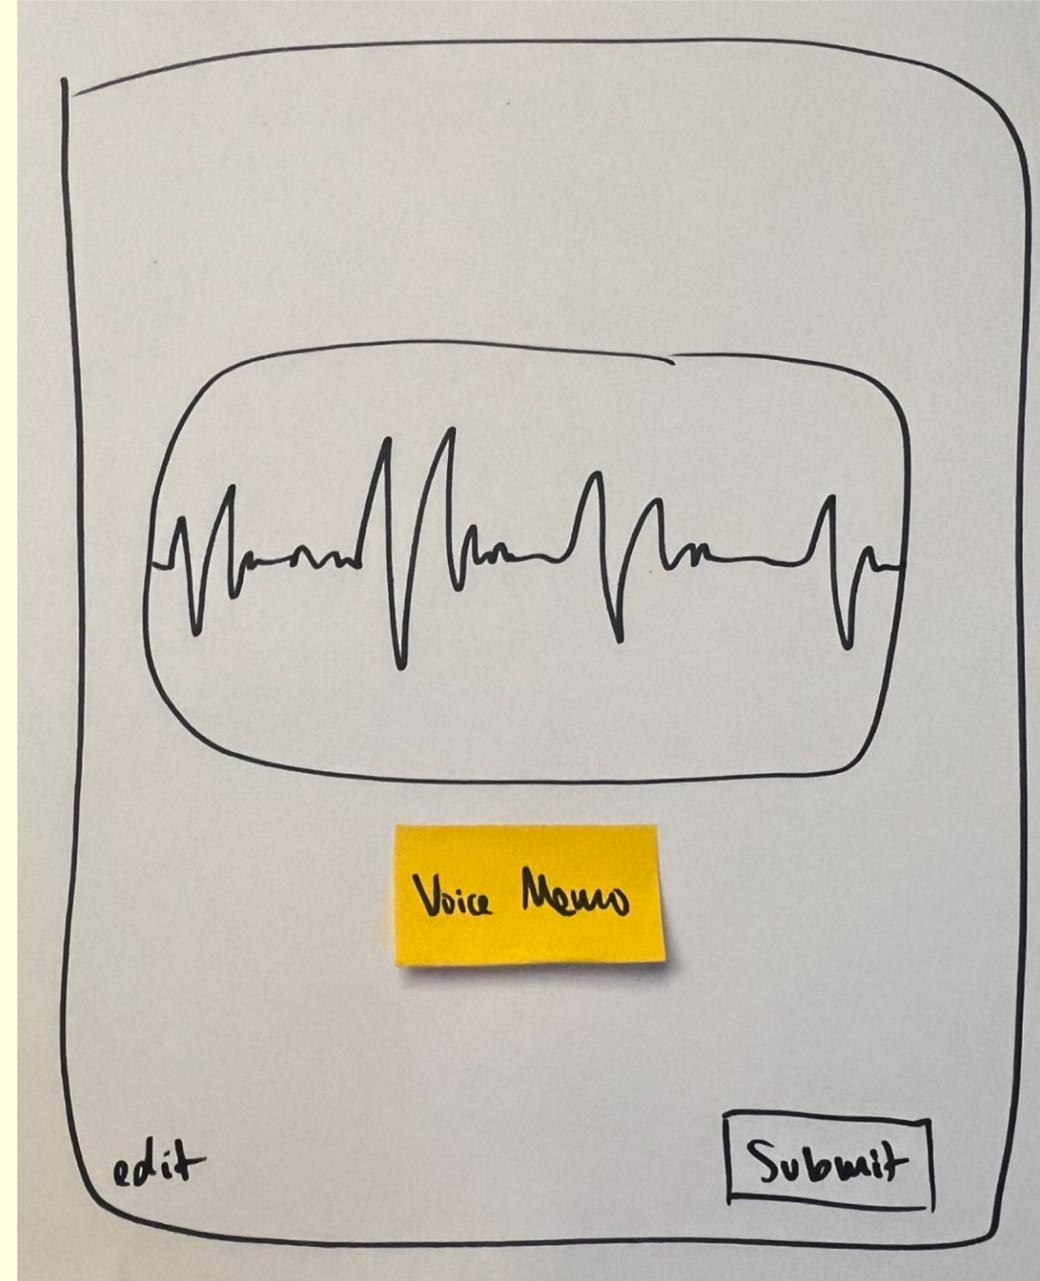

Dead End in Timelock Creation

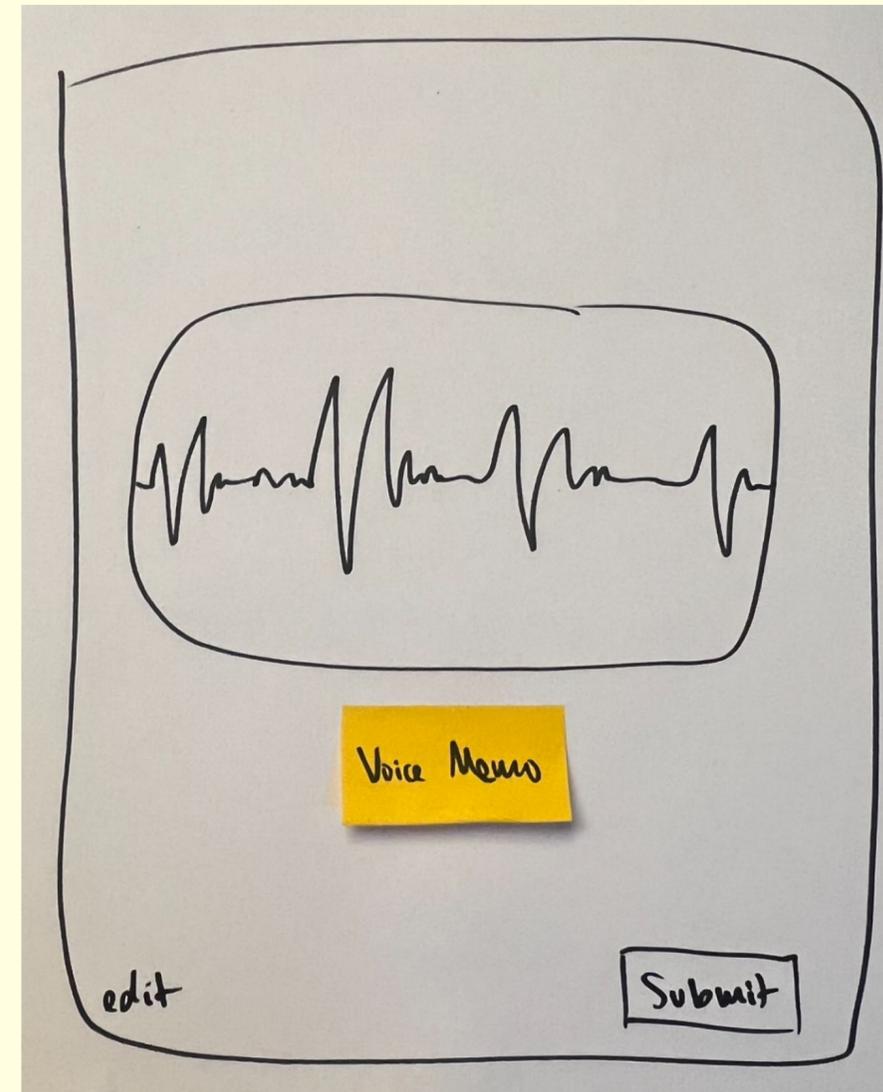

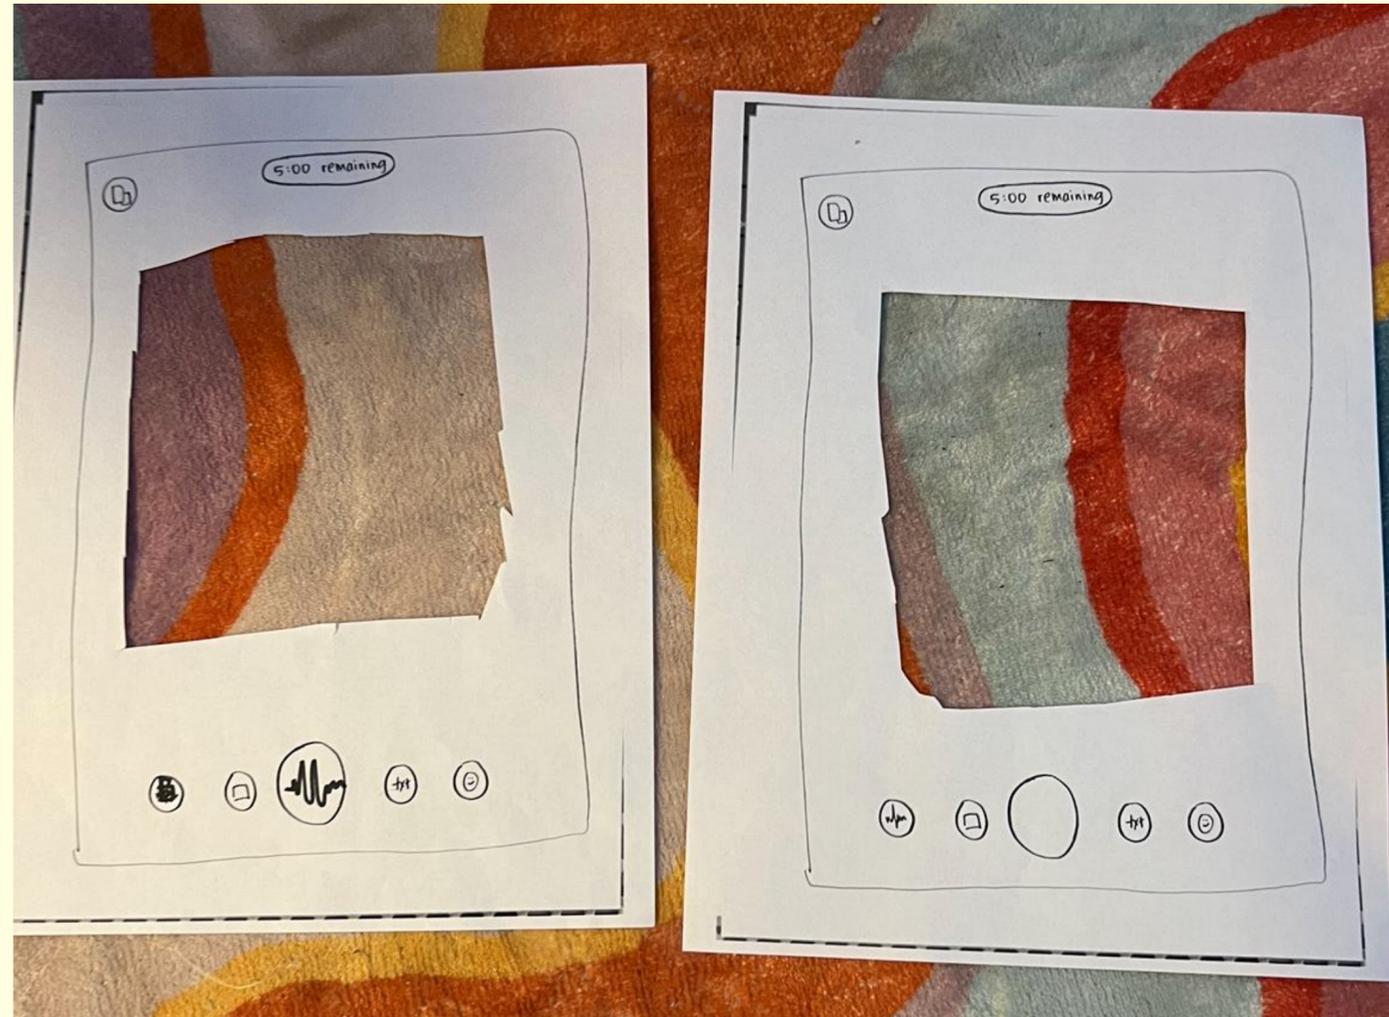

Sharing Options:

Ability to Add Captions

Test Multimedia Sharing Component

Testing Iteration 2

Significant reduction in navigation issues

Process Data

Participants demonstrated positive engagement with the Timelock app.

Key themes emerged around user experience, including confusion with certain icons, a desire for enhanced features, and a strong interest in social interactivity.

Users appreciated the app's multimedia capabilities for sharing memories but noted areas needing improvement to enhance usability and enjoyment.

Bottom-Line Data

Learnable: ease of first time use

After prototype modification, there was largely no confusion

Especially for uploading media during an event:

- Big buttons
- Simple text
- quick process

Pleasant: Easy and fun to use

What participants liked:

Spontaneity: idea of getting a notification at any moment

Multimedia upload options

Key Aspect Missing:

More Social Components

Key Usability Goal to Address:

**Pleasing:
Easy and
FUN to use**

Participants felt more social components would make timelock more engaging

Social components participants felt would make timelock more FUN

- notifications when other people upload
- photos as a live update to attendees who are a part of the timelock
- can send photos an hour or two before timelock starts to “build hype”
- allow comments from people at the event
- public timelocks that can be a part of a profile

Common Theme: Real Time Interaction

Key Findings

What would motivate users to continue using timelock?

- Fast and Easy to Use: doesn't distract from the event
- More Social Components
- Aesthetics/ Visual Appearance

Participants stated they would only be interested in continuing to use timelock if a large number of their friends also use it

Implications

Current features are not enough : Need more social elements to keep users engaged

The success of Timelock relies heavily on a network effect, where the value of the app increases as more users join

Improving timelock's design:

- Improve ease of navigation and icon clarity: big buttons, simple text, quick process
- Expand Customization Options: Introduce more ways for users to personalize their experience
- **Add more social components**

What testing couldn't reveal:

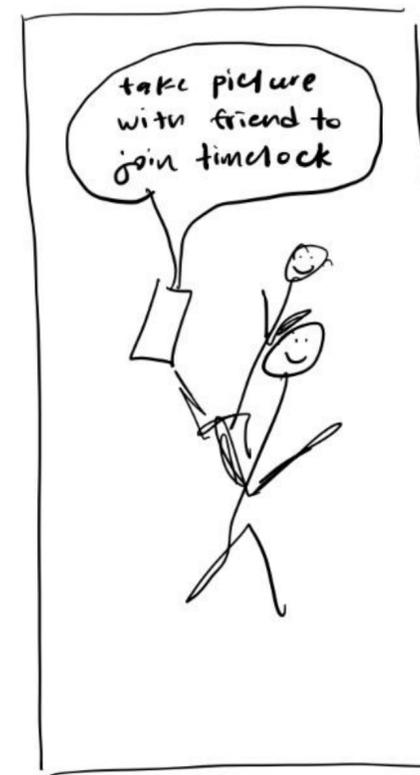

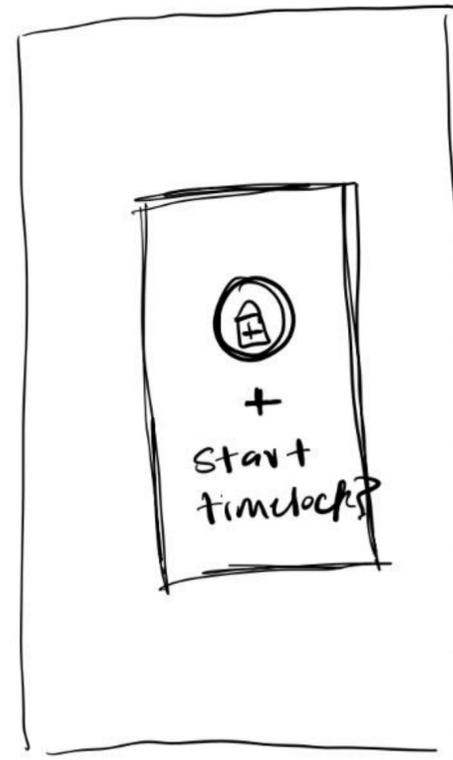

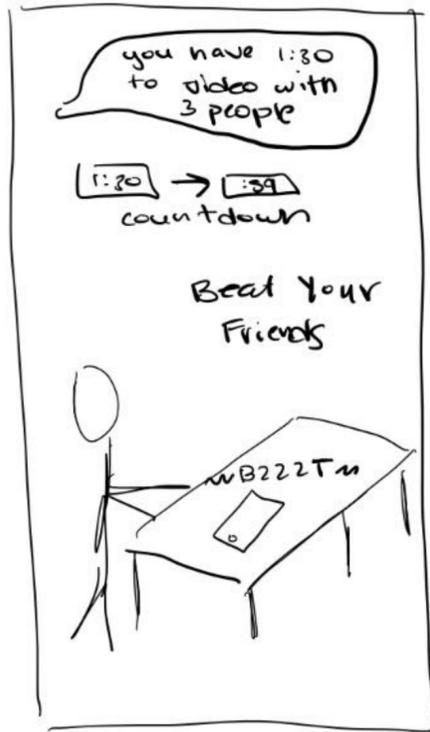

How users would interact with the app in dynamic, real-life settings where distractions could impact usability

How users would interact with social features (currently not implemented)

Long-term engagement of users with the app over multiple events

Thank you.

Concept Sketches (con't)

TODAY'S DATE

PROJECT NAME

iMessage Widget

Pros

- Augments a common user behavior (social group chats with friends) instead of trying to create a completely new one.
- Small interface emphasizes the importance of the group chat and social systems supporting the media sharing behavior. By default, less distracting.

Cons

- iMessage only, not cross-platform.
- Small interface. This design requires leaning into messaging native artifacts and design choices (e.g., texting notifications).
- Only certain demographics enjoy using widgets. This limits overall use.

Mobile App

**EVERYONE: FEEL FREE TO CHANGE
ADD MORE BELOW.**

Pros

- Cross platform, not Apple specific.
- More opportunities for creative designs around multi-media artifacts.
- Versatile invitation format (text, send link, invite via app) vs. text only.

Cons

- Requires download on the part of all users.
- Adds a layer of complexity by bringing user out of their common medium of communication with friends (e.g., text).

Testing Preparation

Testing Procedures

Team Roles
 Constructor: Sophia
 Constructor: Isabelle
 Facilitator: Regina
 Note-taker: Anna

Participants (demographics, recruitment, compensation)
 1. Trisha Sentinathan
 2. Kevin Zuluaga
 3. Vicky Vicente
 4. Parker

Environment and Apparatus
 In person, paper prototyping

Demo Script
 App Description: Timelock is a social app that allows friends to collectively document events while staying present, lowering the burden of capturing memories. In Timelock, friends join an event, contribute a few memories throughout, and leave with a sticker/multimedia memento of the event.

Instructions:

- You will be navigating the app, after being given an instruction. Please narrate the buttons you are pressing and why
 - "Think out loud!"
- You can press buttons by touching the "screen", and we will refresh to the resulting screen
- A post-it on the paper signifies an area of the app in which you can input text, so when pressed you will be prompted to write text
- If you see a cutout, that means you can take a photo of something in your surroundings
- This is a paper prototype of the app, so you might run into dead ends. In the event that that happens, we'll let you know and you can try to click something else on the screen

Moderate Task (Before):
 Can you show me how you would start a timelock for a night out?

Moderate Task (After):
 Ease of Use

- What are your first thoughts when you see the interface? Is it inviting or confusing?
- Are there any buttons or icons that stand out to you? Why?

Timelock Information

- Is there any other information you would want to include in the description of a timelock? Is there anything missing? What kind of information do you think is necessary to include when starting a Timelock?

Inviting friends to a timelock

- Do you see a clear way to add participants? What would you expect that process to look like?
- Is there any method of sharing a timelock you think would be easier?

Task Flow

- Do you think creating the timelock took too much effort or required too much information?
- How do you feel about the flow of tasks when creating a timelock? Should they be rearranged?
- How do you feel about the multiple step process of adding all of the information (inviting people, time, description) for a timelock? Would you prefer adding all of the information in one screen?

Overall

- Do you foresee any difficulties in starting a Timelock? What might be frustrating?
- Is there anything about this interaction that feels unclear or cumbersome?
- Are there any elements that could make the process smoother for you?

Simple Task (Before):
 Can you show me how you would share a voice-memo to your timelock during your night out?

Simple Task (After):
 Ease of Use

- What are your initial thoughts about the photo-sharing interface? Is it easy to understand?

Photo Selection Process

- How would you go about selecting a photo to share? Is this process straightforward?
- Are there any options for importing photos (like from a gallery, camera, etc.) that you would expect to see?

Timelock Context

- Is there any additional information you would want to include with the photo (like a caption or tags)?

Task Flow

- Does sharing a photo feel like a seamless part of the Timelock process?
- How do you feel about the number of steps required to share a photo? Is it manageable or cumbersome?
- Would you rearrange or change anything about the process of sharing a photo from a timelock?

Overall

- Do you foresee any challenges when sharing a photo? What might be frustrating in this process?

- Is there anything about this interaction that feels unclear or that you would change?
- What elements could enhance the photo-sharing experience for you?

Complex Task (Before):
 After your night out, can you show me how you would share the timelock with a friend?

Complex Task (After):
 Ease of Use

- What are your first impressions of the interface for sharing a Timelock? Is it intuitive?

Sharing

- Is there any additional information or customization you would want to include when sharing the Timelock?
- What methods of sharing do you see available (e.g., link, direct invite, social media)? Are these options sufficient?

Inviting Friends

- How easy is it for you to select or invite friends to view the Timelock? Does this feel straightforward?
- Do you see a clear way to manage who has access to the shared Timelock? What would you expect from that functionality?

Task Flow

- How do you feel about the overall flow of sharing the Timelock? Is it a smooth transition from creating it to sharing it?
- Do you think the number of steps involved is appropriate, or would you prefer a more streamlined process?

Overall

- Is the sharing process encouraging for group engagement?
- Do you foresee any potential issues when sharing the Timelock with friends? What might be frustrating?
- Is there anything in this interaction that feels unclear or could be improved?
- What features could enhance your experience when sharing a Timelock?

Wrap Up Questions
 General Impressions

- What are your overall thoughts about the Timelock app? How does it compare to your expectations?

Functionality

- Were there any features you expected to find but didn't? What would you like to see added?
- How well do you think the app supports the goal of documenting memories collectively?

Usability Goal: Ease of first time use

- Did you find any part of the app confusing or difficult to navigate? Can you elaborate?
- Were there any moments during the tasks where you felt lost or unsure of what to do next?

- How intuitive did you find the app's layout? Were there specific sections that seemed out of place?
- Would you say you were able to complete the tasks without prior knowledge of the app? Why or why not?

Usability Goal: Fun and engaging

- How engaging did you find the app overall? Were there features that particularly drew you in or kept your interest?
- Were there any aspects of the app that you found tedious or boring? What made them feel that way?
- Are there any design elements that you particularly liked or disliked? What were they?
- Did the app create a sense of nostalgia or excitement for sharing memories? How so?

Feedback/Improvements

- If you could change one thing about the app, what would it be and why?
- What features would enhance your experience and make the app more enjoyable to use?
- Would you be interested in using this app for real events in the future? Why or why not?
- What would motivate you to use this app again in the future? Are there specific features that would bring you back?

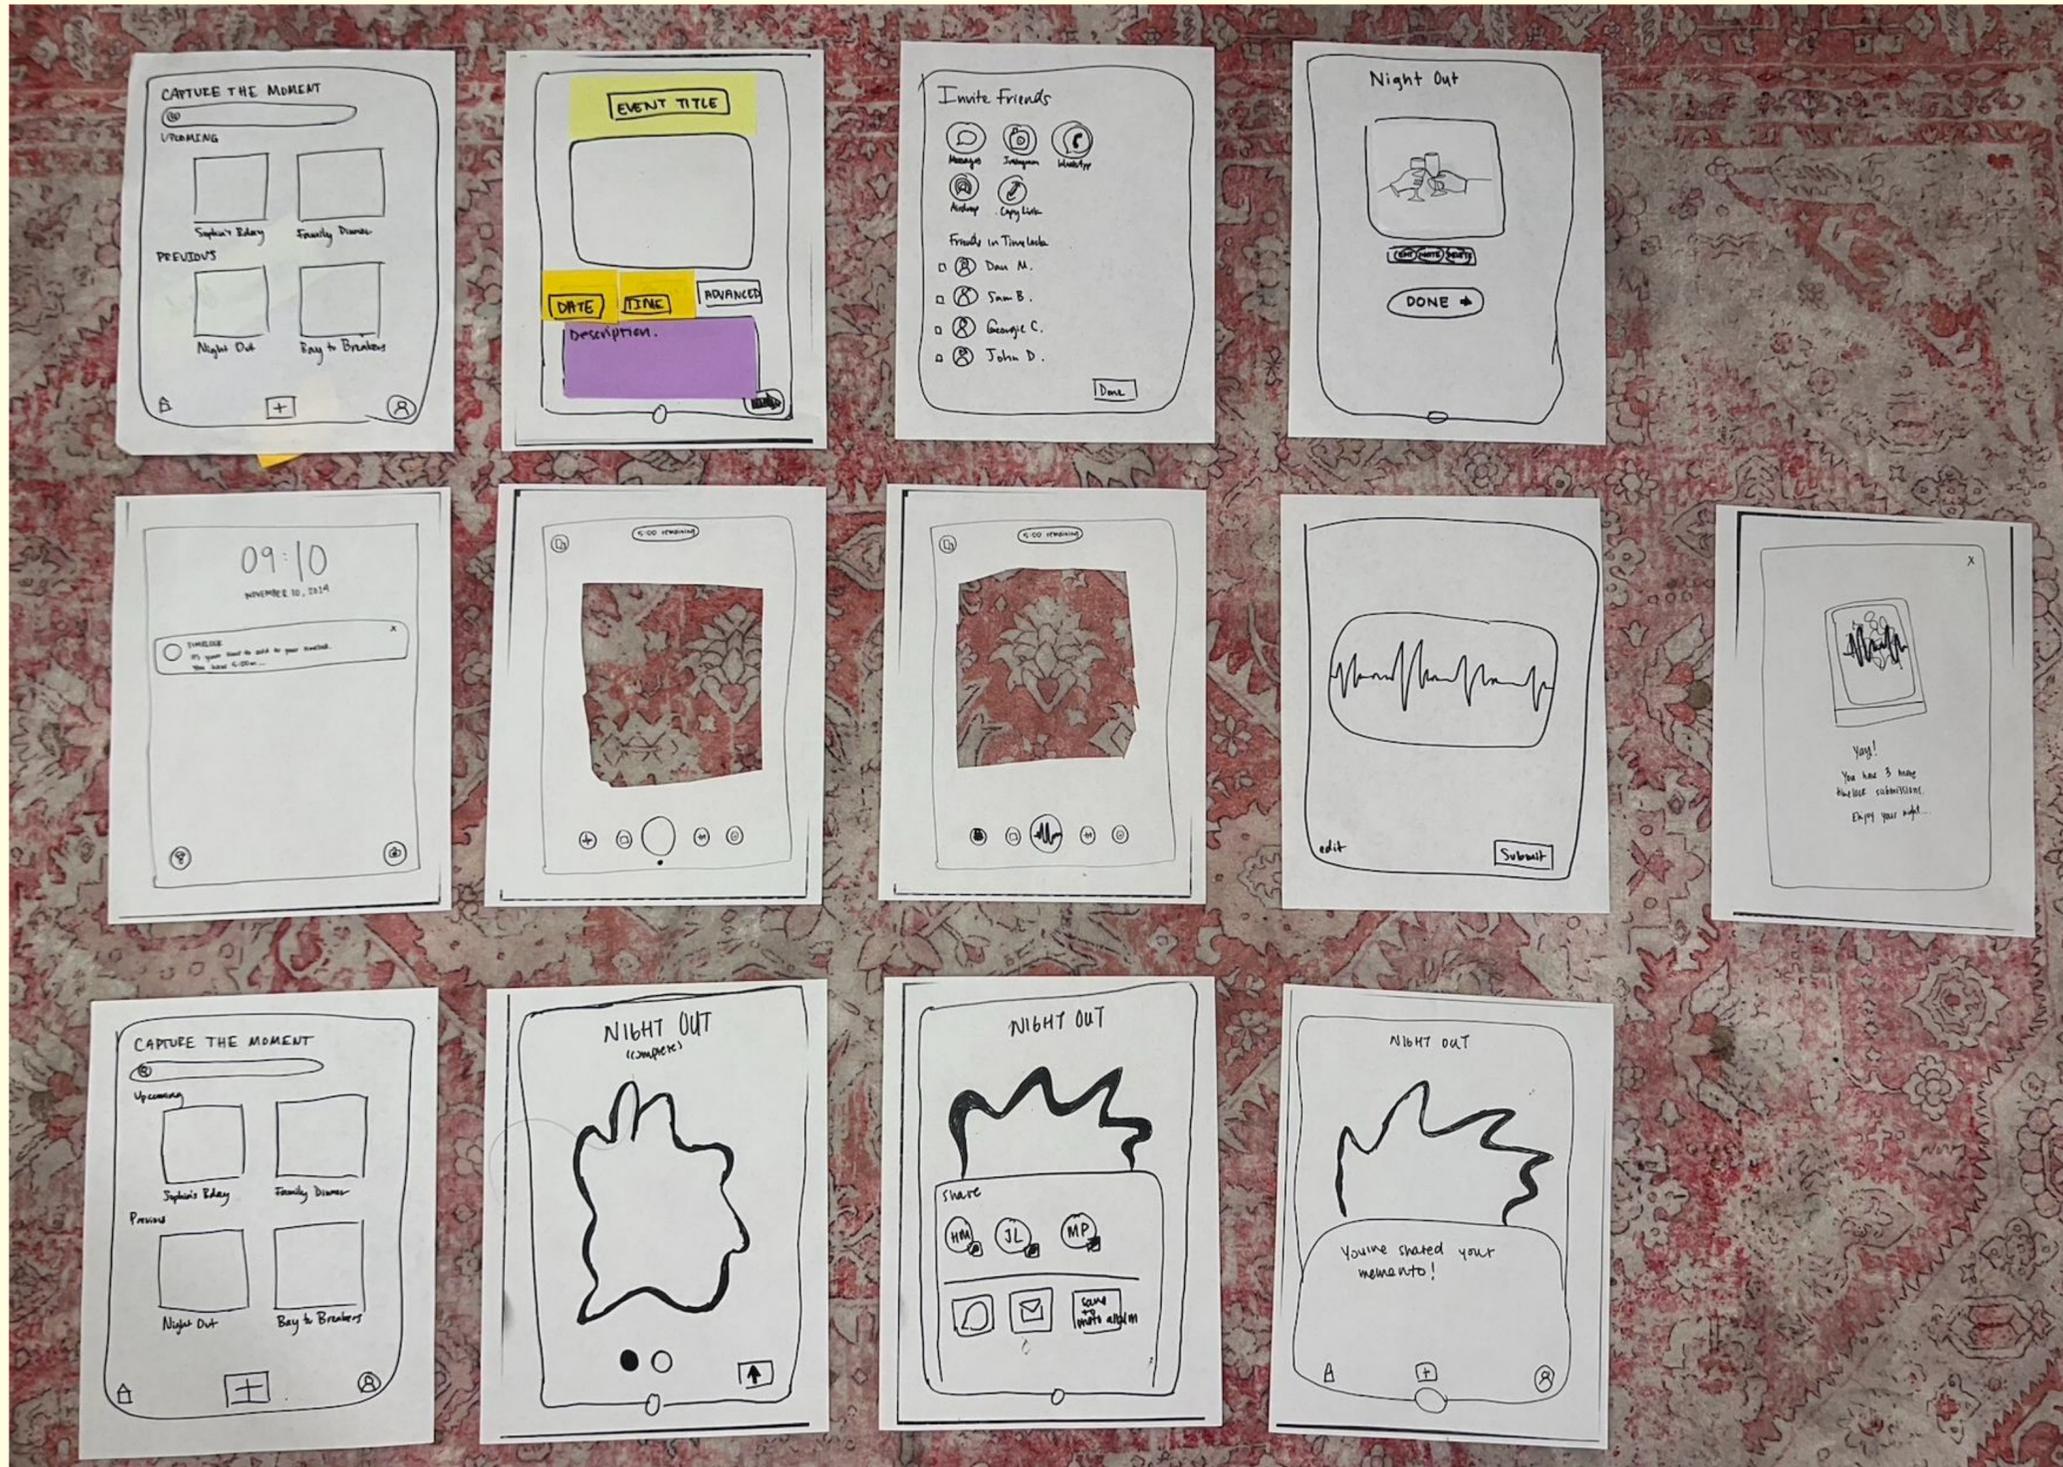

Usability Goals
 #1: Pleasing: Easy and Fun to use
 -Important so that people will continue to use the app
 #2: Learnable and EASY FIRST TIME USE: Users can quickly learn how to navigate the app
 -Timelock is collaborative, and relies on the participation of many users in a social group
 -Many people might download the app, immediately prior to an event when a timelock would start, so they need to be able to easily navigate and engage with the app with no prior experience

Key Measurements

- Relative time it takes for users to complete each task
- Whether or not users successfully completing the task
- Users minimally running into "dead ends"
- Users enjoy engaging with features
- Verbally assessing user satisfaction

Birds Eye View of Final Paper Prototype

Organized Log of critical incidents

Full Summaries, Incidents, Analysis

<https://docs.google.com/document/d/1jtg3my9MS6SPV-cvs4cAUy7VMSywcRFJDIONZbnZkKc/edit?usp=sharing>

Participant 1: Thrisha

- **Incident 1: Confusion with Inviting Friends**
 - **Description:** Thrisha felt unsure if she had successfully invited friends after pressing the invite button.
 - **Impact:** Created uncertainty about whether the task was completed.
- **Incident 2: Confusing Group Chat Icon**
 - **Description:** Unclear if the icon creates a new group chat or uses an existing one.
 - **Impact:** Led to hesitation in using the feature, possibly affecting social interactions.

Participant 2: Kyle

- **Incident 3: Unclear Start Button for Timelock**
 - **Description:** Kyle found the generic plus sign for starting a new Timelock confusing and suggested a more specific icon.
 - **Impact:** May have delayed task initiation and user confidence.
- **Incident 4: Navigation Loop**
 - **Description:** One participant felt trapped in a navigation loop due to unclear back buttons.
 - **Impact:** Frustrated the user, potentially discouraging continued use.

Participant 3: Vanessa

- **Incident 5: Missing End Time Control**
 - **Description:** Raised concerns about the host's control over when the Timelock ends.
 - **Impact:** Highlighted a need for flexibility in managing events.
- **Incident 6: Suggestions for Sharability**
 - **Description:** Suggested adding features for sharing public Timelocks on user profiles.
 - **Impact:** Indicates a desire for greater community interaction and content visibility.

Participant 4: Parker

- **Incident 7: Plus Sign Visibility**
 - **Description:** Suggested making the plus sign larger for better visibility.
 - **Impact:** Affects user experience in initiating tasks.
- **Incident 8: Questioning Icon Purpose**
 - **Description:** Parker was unsure about the purpose of certain icons, like the user icon.

- **Impact:** May lead to confusion or disengagement if users are unclear on navigation elements.

Summary of Incidents

- **Common Themes:**
 - **Confusion Around Navigation:** Several participants expressed uncertainty about buttons and icons, particularly regarding inviting friends and starting a Timelock.
 - **Desire for Enhanced Social Features:** Feedback indicated a strong interest in features that enhance community interaction and sharing.
 - **Visual Clarity:** Suggestions for improving icon visibility and clarity were consistent, indicating a need for better design choices.

Differences Between Iteration 1 and 2

1. **Reduced Navigational Issues:**
 - **Iteration 1:** Participants like Thrisha and Kyle reported confusion with buttons (e.g., "invite friends") and navigation loops.
 - **Iteration 2:** Participants (including Vanessa) found the interface intuitive and streamlined, indicating that changes addressed previous confusion effectively.
2. **Improved Clarity of Features:**
 - In Iteration 1, there was uncertainty around features such as group chats and sharing methods. Iteration 2 saw clearer descriptions and a better layout for these features.
3. **User Feedback on Enhancements:**
 - Participants in Iteration 2, like Vanessa, appreciated the design improvements, noting a clear process for inviting friends and a seamless photo-sharing experience.

a. Process Data (What's Happening in the Big Picture)

The feedback from all participants indicates a generally positive reception of the Timelock app. Users appreciate the app's ability to facilitate memory sharing and event documentation, highlighting its intuitive design and engaging features. Participants expressed excitement about using the app for real events, suggesting a strong potential for social interaction and collective memory creation.

b. Bottom-Line Data (Usability Goal Key Measurements)

- **Learnable:**
 - Participants found the app straightforward, with many noting that they could complete tasks efficiently.
 - Feedback indicated high task completion rates, with users successfully navigating through the processes of starting a Timelock and sharing photos.
- **Pleasant:**
 - User satisfaction was evident, as participants enjoyed engaging with the app's features, particularly the photo-sharing interface.

- Most participants indicated they would use the app again and recommend it to friends, reflecting a positive user experience.

c. Other Relevant Observations

- Participants expressed interest in additional features that enhance social interaction, such as live updates and customizable sharing options.
- Feedback highlighted the importance of content relevance, with users preferring smaller group dynamics for more meaningful engagement.

d. How Well Did You Achieve Your Usability Goals Based on the Key Measurements?

The usability goals were largely achieved, with participants demonstrating ease of use and enjoyment of the app. High satisfaction levels and a willingness to recommend the app indicate that it is meeting the intended objectives for learnability and user engagement.

a. What Are the Implications of Your Findings?

The findings suggest that the Timelock app is well-positioned to meet user needs for documenting and sharing memories in a social context. The positive feedback on usability and engagement highlights the potential for growth and user retention.

b. Based on the Results, How Will You Change Your Design?

1. **Enhance Social Features:** Implement functionalities that promote real-time interactions and notifications during events.
2. **Expand Customization Options:** Introduce more ways for users to personalize their experience, such as customizable tags or themes for events.
3. **Focus on Content Management:** Develop features that allow users to curate and filter shared content based on group size or event type.

c. Was There Anything That the Testing Couldn't Reveal?

The testing did not fully capture how users would interact with the app in dynamic, real-life settings where distractions could impact usability. Additionally, the long-term engagement of users with the app over multiple events remains to be evaluated.
