Introduction to Julia
Tutorial Session Overview

ENGR108
Stanford University

June 29, 2022
Session Objectives

By the end of today’s session, we would

▶ know how to setup and use Julia environments
▶ be familiar with
  – basic concepts such as lists, variables, data types
  – operations such as functions, conditionals, looping, plotting
  – vectors, and matrices in Julia
▶ have walked through a list of resources with commands, examples, and common mistakes to avoid

The following slides are available under the Julia tab on course website.
