Mannheim Eurobarometer Trend File, 1970-1999 (ICPSR 3384)

SUMMARY: The Mannheim Eurobarometer Trend File, created through cooperation of the Mannheimer Zentrum für Europäische Sozialforschung (MZES) and the Zentrum für Umfragen, Methoden und Analysen (ZUMA), combines the most important trend questions of the Eurobarometer surveys conducted between 1970 and 1999. The file consists of 100 trend questions asked at least five times in standard Eurobarometer surveys. A total of 877,223 respondents from 15 European Union member nations (initially, six European Community nations) plus Norway in some years were interviewed in these surveys. The cumulative trend questions concentrated on European Community (EC)/European Union (EU) issues and other sociopolitical issues, as well as electoral behavior. The major focus of the surveys was respondents' knowledge of and opinions on the EU/EC, including how well-informed they felt about the EC/EU, whether their country had benefited from being an EC/EU member, and the extent of their personal interest in EC/EU matters. A number of questions concentrated on the European Parliament, the European Commission, and the Single European Market. Respondents were asked whether they heard about those institutions, what impression they had of the European Commission, what importance the Single European Market had, what role the European Parliament had, and how important the European Parliament elections were. They were also asked whether they were for or against European unification, whether the speed of European integration was appropriate, and whether they were satisfied with democracy in the EC/EU. Respondents determined policy areas in which decisions should be made separately by national governments and jointly within the EC/EU as a whole. Those polled were asked how satisfied they were with their lives, whether they attempted to persuade others close to them to share their views on subjects they held strong opinions about, whether they discussed political matters, and how they viewed the need for societal change. The surveys queried respondents about the general economic situation in their countries, how often they watched news on TV, read news in papers, and listened to news on the radio, their interest in politics and support for different types of political and social movements, and the probability of strikes and world war in the next ten years. A number of questions concentrated on respondents' voting behavior, including their intention to vote in EP elections and the party they voted for in the national elections. Demographic and other background information provides respondents' age, gender, marital status, the number of people residing in the household, number of

children under 15 in the household, age at completion of education, left-right political self-placement, occupation, religion, subjective social class, political party affiliation, trade union membership, household income, region of residence, and subjective size of community.

UNIVERSE: Persons aged 15 and over residing in the EU (previously EC) member countries and in Norway.

SAMPLING: Multistage national probability samples.

Part 1:

Selection of Trends and Construction of the Mannheim Trend File

1. Catalogue of Trends of the ZEUS-Eurobarometer-Question Bank¹

The project "Conservation of the ZEUS Database and Eurobarometer Trend File" was a co-operation of the *Mannheimer Zentrum für Europäische Sozialforschung* (MZES) and the *Zentrum für Umfragen, Methoden und Analysen* (ZUMA). It aimed at storing the data, at archiving the documentations and reports of the former *Zentrum für Europäische Umfrageanalysen und Studien* (ZEUS) and, finally, at creating a SPSS file from the ZEUS-databases with the most important trends of the Eurobarometer surveys. The first step was to retrieve a catalogue of Eurobarometer trends in the ZEUS question bank (see Appendix 1).

2. Selection of Trends

The trend variables for the Mannheim Eurobarometer Trend File were chosen in an iterative selection procedure. Some 150 trend variables were taken from the ZEUS Eurobarometer databases. (In addition to the data stored at ZEUS, more recent time points were added from individual Eurobarometer surveys). The selection was based on the list of trend questions (see Appendix 1) of the ZEUS question bank which contained all Eurobarometer surveys from 1970 to 1995. In this list, questions that were asked at least three times in identical wording are defined as "trends". Standard Eurobarometer as well as special studies and flashes are legitimate sources.

In contrast to the earlier ZEUS definition, we restricted our search for trend variables on standard Eurobarometer surveys (i.e., the regular face-to-face surveys of the European Commission). Further, we raised the minimum frequency for inclusion as a trend to five standard Eurobarometer surveys – questions that were asked less than five times were not accepted. Finally, questions on special subjects and technical variables were eliminated. By doing so, we reduced the total number of trend questions from 431 (ZEUS question bank) to 142 trends by raising the minimum required frequency to five; and further to 109 trends by restricting ourselves to standard trends. 13 questions on special subjects² were omitted, as were 15 country-specific questions³ and five technical trends. Of the resulting 109 trends, 66 covered attitudes and behaviours while 43 were demographic or technical variables. By omitting redundancies and simple transformations of original variables, demographics were further reduced to 28 trends. Concerning the questions on attitudes etc. two trends have been excluded: One index with unclear content and construction and another, which can easily be constructed by recoding a maintained trend variable. Finally, seven variables were added to the dataset for technical reasons⁴. As a result, the Mannheim Eurobarometer Trend File contains a total of 100 trend questions. The question wordings of all these trends were checked systematically and are documented in Part 2 of this report.⁵

¹ Data file construction and codebook of the *Mannheim Eurobarometer Trend File* is based upon the works of the staff of the former ZEUS institute at Mannheim University, and in particular to its data base administrator Peter Schubert. The production of this trend file was supported by the capable research assistance of Bernd Krüger and Stefan Solleder, among others.

² Special subject questions are concerning subjects like cancer, smoking, nuclear energy, energy or environment.

³ Country specific questions are those asked only in a single country.

⁴ These trends are: TECH VAR EUROBAROMETER NUMBER, TECH VAR IDENTIFICATION NUMBER, TECH VAR NATION IDENTIFIER, TECH VAR SPLIT VARIABLE, TECH VAR WEIGHT EUROPEAN UNION, TECH VAR WEIGHT NATION and TECH VAR WEIGHT SAMPLE.

⁵ Especially, the documentation reports all (minor) differences from a general trend question wording that were felt acceptable.

3. Identifying Corresponding Variables in the ZEUS-Eurobarometer-Database

After the selection of the trend questions, the corresponding variables were identified. The number of variables of the selected 100 trend questions increases to 132, as single items of multiple response questions or battery questions are coded with the same trend name.

4. Harmonisation of Trend Variables

Identical question wordings do not automatically translate into identical codings. Only harmonised trend variables are coded identically (same variable names and labels, same missing values codes). As some trends are based on instruments which differ slightly from one survey to another, the following aspects were taken into account while integrating trend variables into the Mannheim Eurobarometer Trend File:

- variable name

Harmonised trend variables have identical variable names. If variables were not harmonised yet in the ZEUS data bases, a common name had to be chosen before integrating them into the Mannheim Eurobarometer Trend File.

- harmonisation of codings

Even when trend questions are asked with identical answering categories, not harmonised trends do not necessarily have identical codings. Therefore, harmonisation of trends meant ensuring that categories with identical wording do have identical codings over time.

- harmonisation of missing value codes

Missing value codes like DK (don't know) or NA (no answer) were not handled in a uniform manner in the different Eurobarometer studies. In several Eurobarometers, those categories are coded separately, in other studies not. To complicate things, in a number of Eurobarometers, some countries chose the first procedure and others the second. For reasons of harmonisation both categories were recoded to a uniform DK/NA-category.⁶ Missing values which result from filter questions (or when a question was not asked in a particular country) were coded separately as INAP (inapplicable), as far as possible.⁷

Missing values are coded in a uniform manner in all variables. INAP is coded 7 in the case of variables with a width of one, 97 in the case of a width of two, and 997 if variables are coded with a width of three. DK, NA were coded 8, 98 respectively 998.

⁶ In nearly all variables: the exceptions are VOTEINT, INCLVOTE, LASTVOTE, FEELCLO, EUVONEXT, REGIONAT, SCMI, TEA, MATPMAT, and MEDIAUSE.

⁷ Some Eurobarometer studies distinguish between DK/NA and INAP while others do not. If INAPs are coded with the DK/NA, a subsequent correction was not done.

- variables and value label

In addition to variable names the labels of the trend variables were harmonised.

- checking plausibility

While consistency checks (e.g. by crossing age and education) have not been done here, plausibility checks have been done. For each single trend variable country specific frequency distributions have been inspected over time. In the case of remarkable fluctuations, printed documents have been consulted to correct data where necessary and possible.

This occurred only in rare occasions.

5. Eurobarometer Surveys Since 1996

The ZEUS data base was built from single Eurobarometer editions as produced and distributed by the Inter-university Consortium for Political and Social Research (ICPSR), Ann Arbor, Michigan, and from data-files obtained directly from the fieldwork agency. Eurobarometers since 1996⁸ have been obtained from the Zentralarchiv für Empirische Sozialforschung at the University of Cologne. They were also inspected for the selected trend questions, and harmonisation tasks comparable to the ones described above have been carried out for each of these twelve additional Eurobarometer files. And again, variables (e.g. vote intention) that are characterised by country specific answering categories and are thus stored as a set of variables (one variable per country) have been adjusted to the standards of the ZEUS Eurobarometer database. Out of these sets of country specific variables, one single variable is constructed in each case containing codings that differ in their meaning from one country to another. This helps to reduce the number of variables and the size of the data file in total. These special variables are documented and described in Part 2 of this data file report.⁹

⁸ EB45.1, EB46.0, EB46.1, EB47, EB47.1, EB47.2, EB48, EB49, EB50.0, EB50.1, EB51.0, EB51.1

⁹ The necessary information to handle variables with country specific codings can be found in the Appendix to this documentation.

6. Construction of the File of all Trend-Variables of all Standard-Eurobarometers

After harmonisation, the individual Eurobarometer datasets were matched into one comprehensive file. The Mannheim Eurobarometer Trend File consists of 132 trend variables which are extracted from 70 standard Eurobarometer surveys in which a total of 877223 respondents were interviewed. The uncompressed SPSS-file occupies about 174 MB of storage space in the uncompressed version.

Part 2:

Selected Trends: Question Texts and Frequency Distributions

1. Overview of Selected Trends

In the following synopsis all trend questions are listed as they were included in the individual Eurobarometers. The codings in the header of the table identify the individual Eurobarometers (see Table 2). The last column of the table reports on how often the respective trend was asked in the Eurobarometer studies as covered by the Mannheim Eurobarometer Trend File.¹⁰

2. The Structure of the Documentation

The structure of the documentation of the Mannheim Eurobarometer Trend File is the following:

- Trend names

The documentation refers to the trend names of the ZEUS question bank as the selection of the variables of the Mannheim Eurobarometer Trend File was based on it. These trend names consist of one or more words and are not necessarily identical with the corresponding variable names.

- Variable names

As a trend does not necessarily result in a single variable, trend names and variable names are not always identical. If a trend requires several variables, variables are named in such a way that the common trend is identified by a prefix. In the case of harmonised trends the trend names of the qbank are applied as variables names.

- Question texts

As we are dealing with trend variables, question wordings are constant over time (except minor acceptable variations). Differences mostly occur with respect to the placement and the sequence of questions in the questionnaire. Therefore the wording of the question is documented without question numbers. The question wordings are taken from the English basic questionnaires of the Eurobarometer surveys. Variations of the wording in various Eurobarometer studies are reported in footnotes. DK or NA-categories are neglected here (see above).

- Frequency distributions

The documentation of the dataset is completed by tables of **unweighted** frequency distributions of trend variables, broken down by Eurobarometer surveys. The user is advised that these **unweighted** frequency distributions are given for documentary purposes, and that they must not be mistaken as nationally representative findings. What follows is not a data source book, it is a codebook.

3. Selected Trends in Detail

According to their subject, trends are grouped into eight categories: technical and weighting variables, demographic variables and trend variables concerning EC/EU attitudes and behaviours and their indices, socio-political attitudes and behaviours and their indices, especially those on voting. Technical variables are used to identify the Eurobarometer, the nation, or the individual respondent. Weighting variables help to adjust samples to different universes. Demographic variables describe the social position of the respondents, for example their age, sex, or education. EC/EU variables are variables referring to questions on the European Community or the European Union. EC/EU index variables are indices constructed out of EC/EU variables. Socio-political variables are variables concerning attitudes to political and social issues. Socio-political index variables are indices constructed out of socio-political variables. Finally, voting variables cover variables like national or European vote intention or vote recall.

3.1. Technical Variables

TREND: TECH VAR NATION IDENTIFIER

VARIABLE NAME: NATION

The variable NATION identifies in which country a particular interview was conducted. Usually the selection of countries is restricted to member states of the European Community/European Union. The number of member states increased during its history and varies from six (Belgium, Germany, France, Italy, the Netherlands, and Luxembourg which however was not included in the early ECS studies) in 1970 up to 15 (Belgium, Denmark, Germany, Finland, France, Greece, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal, Sweden, Spain, and the United Kingdom) in 1999. Concerning the United Kingdom and Germany, additional distinctions between Great Britain and Northern Ireland and between West and East Germany (Federal Republic of Germany since reunification) are used.

The variable NATION is also needed to identify the meaning of variables with country specific categories, e.g. income or the vote variables.

The variable NATION is included in all surveys. It is coded in the following way:

1. FRANCE
2. BELGIUM
3. THE NETHERLANDS
4. GERMANY WEST
5. ITALY
6. LUXEMBOURG
7. DENMARK
8. IRELAND
9. GREAT BRITAIN

11. GREECE
12. SPAIN
13. PORTUGAL
14. GERMANY EAST

TREND: TECH VAR IDENTIFICATION NUMBER

VARIABLE NAME: ID

The variable ID is used to identify individual respondents in each of the Eurobarometer studies unequivocally. It has as many categories as respondents (with a frequency of one). As the original IDs of the Eurobarometer datasets do not always fulfill this requirement, a new ID was created in each Eurobarometer by assigning a sequential number to each individual respondent.

Like NATION, the variable ID exists for all Eurobarometer studies.

TREND: TECH VAR EUROBAROMETER NUMBER

VARIABLE NAME: EB

The variable EB is used to identify the particular Eurobarometer in which an interview was taken. A three-digit numbering was used where the first two digits identify the Eurobarometer number (like EB11) and the last digit identifies a particular wave of a Eurobarometer operation. In later Eurobarometers in particular more than one survey was taken within the framework of one Eurobarometer operation.

The variable EB is available for all Eurobarometer studies.

The Eurobarometer-surveys integrated in the Mannheim Trend File are coded the following:

TREND: TECH VAR SPLIT VARIABLE

VARIABLE NAME: SPLIT

The variable SPLIT identifies which group of a split half experiment for a particular question the individual respondent was subjected to. The meaning of the split varies of course from question to question (see Appendix 2 for details).

3.2. Weighting Variables

Weighting variables adjust distributions of social-structural characteristics in a sample to those in a universe. Those adjustments have been made in a country-specific idiosyncratic way during the years when Eurobarometers and the preceding ECS studies were carried out by Gallup (Europe). When INRA took over in 1989 (starting with EB321), a consistent representative weighting routine has been applied allover. Six socio-demographic criteria were used (age, sex, size of household, regional affiliation, size of community). In order to harmonise weighting factors throughout the Eurobarometer series, ZEUS initiated a recalculation of weights for the earlier Eurobarometers (which was technically realised by INRA, Brussels). Therefore the three weighting variables WSAMPLE, WNATION, and WEURO that are included here are established upon common and uniform criteria for all Eurobarometer studies. The original weighting factors of the pre-1989 surveys are not included in the Mannheim Eurobarometer Trend File.

TREND: TECH VAR WEIGHT SAMPLE

VARIABLE NAME: WSAMPLE

WSAMPLE is the most basic of all three weighting factors. It adjusts distributions in the samples to those in the respective universe.

TREND: TECH VAR WEIGHT NATION

VARIABLE NAME: WNATION

As more than one sample is drawn for some nations, WNATION is used to adjust distributions to those in the respective nations. Note that WSAMPLE and WNATION only differ for the United Kingdom and, in later surveys, for Germany.

TREND: TECH VAR WEIGHT EUROPEAN UNION

VARIABLE NAME: WEURO

WEURO adjusts the size of national (resp., subnational) samples to the size of national populations relative to one another. This weight is used when the European Community/European Unions is analysed as an entity rather than its constituent nations or regions.

1. ONE
2. TWO
3. THREE
4. FOUR
5. FIVE
6. SIX
7. SEVEN
8. EIGHT
9. NINE CHILDREN AND MORE
10. NONE

¹⁷ - CHILDOLD and CHILDYNG with variations concerning the number of answering categories:
-- EB3, EB4 (only CHILDOLD), EB6, EB8, EB9, EB10: categories: ..., 4. FOUR, 5. FIVE OR MORE, 0. NONE; DK, NA; (in the dataset coded DK, NA 98).
-- EB11: ..., 4. FOUR, 5. FIVE OR MORE, 0. NONE, NA. (in the dataset coded DK, NA 98).
-- EB4 (only CHILDYNG), EB5, EB7, EB10A: 0. NONE, DK, NA; (in the dataset coded DK, NA 98). 1. ONE, ..., 9. NINE OR MORE..
-- EB12: 0. NONE (in the dataset coded 10), 1. ONE, ..., 5. FIVE OR MORE..
-- EB13, EB14, EB15; EB16: 0. NONE (in the dataset coded 10), ..., 6. SIX (AND MORE).
-- EB17 (only CHILDYNG), EB18: 0. NONE, NA (in the dataset coded DK, NA 98); 1. ONE, ... , 7. SEVEN.
-- EB17 (only CHILDOLD) and since EB19: number of children is asked by 10 answering categories like in the basic question text above. Differences occur concerning the names of the single categories. In EB17, EB19, EB20, EB21 the (common) category NONE, NA is originally coded 0 (instead of 10) but recoded in the dataset to 98=NONE; NA. Since EB22, there has been a category 0. NONE but no category DK, NA. In the dataset the category NONE was coded 10.
- Additional variations in the dataset:
-- EB3, EB4 (only CHILDOLD), EB6, EB8, EB9, EB10: 98= NONE, DK, NA, (INAP)
-- EB5, EB10A: 5=FIVE AND MORE (combined categories 5-9)
-- EB7 (CHILDOLD): categories 1- 5, see above, 7=SEVEN OR MORE, 98=NONE, DK, NA, (INAP).
-- EB7 (CHILDYNG): categories 1- 5, 7, see above; 8=EIGHT OR MORE, 98=NONE, DK, NA, (INAP).
-- EB11: (0=)98=NONE, NA.
-- EB12, EB13, EB16: 10=NONE, 98=NA.
-- EB14 (CHILDOLD): 0. NONE, ... , 7. SEVEN, 10=NONE, 98=NA.
-- EB14 (CHILDYNG): ..., 5. FIVE (AND MORE), 10=NONE, 98=NA.
-- EB15: 0. NONE, ..., 5. FIVE, 10=NONE, 98=NA.
-- EB17 (only CHILDYNG), EB18: (0=)98=NONE, NA.
- Single categories show a frequency of 0.

VARIABLE NAME: INCOME

The variable INCOME asks for the financial situation of the respondent. INCOME is coded in a country specific way. The respective codes and the corresponding frequency distributions can be found in Appendix 4.

until EB36:

WE WOULD LIKE TO ANALYSE THE SURVEY RESULTS ACCORDING TO THE INCOME OF THE PEOPLE WE INTERVIEWED.

<INT: SHOW INCOME CARD **>.

HERE IS AN INCOME SCALE; WE WOULD LIKE TO KNOW IN WHAT GROUP YOUR FAMILY IS, COUNTING ALL WAGES, SALARIES, CHILD ALLOWANCES, PENSIONS AND ANY OTHER INCOME THAT COMES IN. JUST GIVE ME THE LETTER OF THE GROUP YOUR HOUSEHOLD FALLS INTO BEFORE TAX AND OTHER DEDUCTIONS.

since EB37.0:

WE ALSO NEED INFORMATION ABOUT THE INCOME OF THIS HOUSEHOLD TO BE ABLE TO ANALYSE THE SURVEY RESULTS FOR DIFFERENT TYPES OF HOUSEHOLDS. HERE IS A LIST OF INCOME GROUPS. <SHOW INCOME CARD **> PLEASE COUNT THE TOTAL WAGES AND SALARIES PER MONTH OF ALL MEMBERS OF THIS HOUSEHOLD; ALL PENSIONS AND SOCIAL INSURANCE BENEFITS; CHILD ALLOWANCES AND OTHER INCOME LIKE RENTS, ETC... OF COURSE, YOUR ANSWER AS ALL OTHER REPLIES IN THIS INTERVIEW WILL BE TREATED CONFIDENTIALLY AND REFERRING BACK TO YOU OR YOUR HOUSEHOLD WILL BE IMPOSSIBLE. PLEASE GIVE ME A LETTER OF THE INCOME GROUP YOUR HOUSEHOLD FALLS INTO BEFORE TAX AND OTHER DEDUCTIONS.

VARIABLE NAME: REGIONAT

REGIONAT is a variable with a country specific meaning used to identify sub-national geographical units. The variable has three digits, where the first identifies the largest regional units, the second a medium unit and the third the smallest regional unit available. The coding scheme is created similar to the Eurostat Regions Code with its division into three regional levels NUTS⁴⁰ I, II und III.

Details of the coding scheme and country specific frequency distributions can be found in Appendix 6.

⁴⁰ NUTS = Nomenclature des unités territoriales statistiques

3.5. EC/EU Index-Variables

TREND: COMMON MARKET INDEX

VARIABLE NAME: SCMI

This index combines REGRET and MEMBRSHP and serves to measure the attitudes of respondents towards economic aspects of European unification. Respondents with a positive attitude to his/her country's membership in the EC resp. EU and who would regret if the EC or EU would be scrapped, are classified as strong supporters of economic integration. Respondents showing positive attitudes towards EC or EU on only one variable, are moderate supporters. Persons with undecided or indifferent position on both variables, are classified as neutral. Respondents who show a negative position towards the EC or EU in either REGRET or MEMBERSHP, are classified as moderate opponents of economic integration. Finally, respondents with negative attitudes on both variables are strong opponents. Figure 1 demonstrates the construction of the index.

The index SCMI is coded in the following way:

- 1. STRONG OPPOSITION
- 2. MODERATE OPPOSITION
- 3. NEUTRAL POSITION
- 4. MODERATE SUPPORT
- 5. STRONG SUPPORT
- 8. DK
- 9. NA

TREND: TYPOLOGY EURO ATTITUDES

VARIABLE NAME: TEA

The index TYPOLOGY OF EUROPEAN ATTITUDES serves to measure the general attitude towards European unification. The joint distributions of MEMBRSHIP and UNIFICTN is analysed. A respondent who thinks positive about her/his country's membership in the EC resp. EU and who supports further efforts for a European unification is classified as positive. A respondent who thinks negative about her/his country's membership in the EC resp. EU and who is against a European unification is classified as negative. The attitudes of all other respondents are defined as ambivalent. Details of this coding are presented in Figure 2.

The index TEA is coded as follows:

- 1. POSITIVE ATTITUDES
- 2. AMBIVALENT ATTITUDES
- 3. NEGATIVE ATTITUDES
- 8. DK
- 9. NA

TREND: COMMON POLICY AREAS

VARIABLE NAME: CP*

The trend "COMMON POLICY AREAS" is a battery of questions asking for policy areas which should either be decided on the level of nation states or on a European level. All policies which were at least five times subject of questions in an Eurobarometer (with the same wording and independent from the number of policies being subject of questions in one survey) are included in the dataset. Appendix 9 shows tables concerning this trend.

EB31.A:

Q.339(A-L). SOME PEOPLE BELIEVE THAT CERTAIN AREAS OF POLICY SHOULD BE DETERMINED BY THE <NATIONAL> GOVERNMENT, WHILE OTHER AREAS OF POLICY SHOULD BE DETERMINED IN COMMON WITH THE EUROPEAN COMMUNITY. WHICH OF THE FOLLOWING AREAS OF POLICY DO YOU THINK SHOULD BE DETERMINED BY THE <NATIONAL> GOVERNMENT, AND WHICH SHOULD BE DECIDED IN COMMON WITHIN THE EUROPEAN COMMUNITY AS A WHOLE? <INT.: READ OUT ITEMS AND MARK AN ANSWER FOR EACH>

<Categories A-L, see Appendix 9>

1. MENTIONED
2. NOT MENTIONED

Since EB32.A:

Q.24(A-L). SOME PEOPLE BELIEVE THAT CERTAIN AREAS OF POLICY SHOULD BE DECIDED BY <COUNTRY'S> GOVERNMENT, WHILE OTHER AREAS OF POLICY SHOULD BE DECIDED JOINTLY WITHIN THE EUROPEAN COMMUNITY. WHICH OF THE FOLLOWING AREAS OF POLICY DO YOU THINK SHOULD BE DECIDED BY THE <NATIONAL> GOVERNMENT, AND WHICH SHOULD BE DECIDED JOINTLY WITHIN THE EUROPEAN COMMUNITY? <INT.: READ OUT>⁸⁵

<Categories A-L resp. A-R resp. 1-30 see Appendix 9>⁸⁶

1. DECISION BY NATIONAL GOVERNMENT
2. DECISION JOINTLY WITHIN THE COMMUNITY

⁸⁵ - Split in EB41: split ballot A: EUROPEAN COMMUNITY; split ballot B: EUROPEAN UNION (EUROPEAN COMMUNITY)
- since EB42: EUROPEAN UNION; 1. NATIONAL GOVERNMENT; 2. THE EUROPEAN UNION

⁸⁶ Split concerning the wording of policy areas in EB41 and EB441. See Appendix 9.

3.7. Socio-Political Index-Variables

TREND: MAT POSTMAT INDEX

VARIABLE NAME: MATPMAT

Following Ronald Inglehart's typology of materialistic resp. postmaterialistic orientations, MATPMAT measures respondents' issue orientations based on the variables VALPRI1 and VALPRI2. Figure 3 explains the construction of this index. Respondents whose first and second priority are identical are not assigned (INAP).

The coding of MATPMAT is as follows:

- 1. MATERIALISTIC
- 2. MIXED ORIENTATION
- 3. POSTMATERIALISTIC
- 7. INAP
- 8. DK
- 9. NA

Figure 3: The Construction of the index MAT POSTMAT

TREND: MEDIA USE INDEX

VARIABLE NAME: MEDIAUSE

The index MEDIAUSE measures respondents' media exposure. The index is based on the variables NEWSTV, NEWSPAP and NEWSRAD which measure the frequency of usage of different news media. If TV and radio as well as newspapers are used several times a week, the overall media use is classified to be very high. If two media are used at least several times a week the overall media use is classified as high. If only one medium is used at least several times a week the overall media use is classified as low. If all three media are used less than several times a week overall media use is classified as very low. Cases with no information on all three variables are coded NA, those with information only on one or two variables are coded DK.

MEDIAUSE is coded as follows:

1. VERY HIGH (++)
2. HIGH (+)
3. LOW (-)
4. VERY LOW (--)
8. DK
9. NA

3.8. Variables Concerning Electoral Behaviour

All variables measuring attitudes and behaviours vis-a-vis political parties (i.e., VOTEINT, INCLVOTE, LASTVOTE, FEELCLO, EUVONEXT) are coded according to the ZEUS Code of Party Families. This ZEUS Code of Party Families is country specific. The categories have different meanings for different countries. The ZEUS Code of Party Families has three digits: The first represents the party family, the second and third identify an individual party in this family. The assignment of parties to families is done according to their overall ideological orientations.

For details of the ZEUS Code of Party-Families see Appendix 10. Table 3 presents the coding of party-families for all countries.

Table 3: The ZEUS Party-Family Code

Party-Family	Category
0 (001 - 099)	not assigned
1 (100 - 199)	Communists
2 (200 - 299)	Socialists
3 (300 - 399)	Liberals
4 (400 - 499)	Christian-Democrats
5 (500 - 599)	Conservatives
6 (600 - 699)	Extreme Right / Nationalists
7 (700 - 799)	Regionalists
8 (800 - 899)	Environmental Parties
9 (900 - 949)	Agricultural Parties
(950 - 989)	Party Groups
	Missing
993	Refused
994	INAP
995	other party
996	empty ballot / no party preference
997	did not vote / would not vote / was not able to vote
998	DK / (DK+NA – if NA not coded seperately)
999	NA

For the high number of missing categories and the special features of variables concerning electoral behaviour, no missing values have been defined.
