Request for Information on Use of ICPSR Resources:

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR Web site for more information on submitting citations.

Data Disclaimer:

The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

Responsible Use Statement:

In preparing data for public release, ICPSR performs a number of procedures to ensure that the identity of research subjects cannot be disclosed. Any intentional identification or disclosure of a person or establishment violates the assurances of confidentiality given to the providers of the information. Therefore, users of data obtained from the ICPSR archive and/or any of its special topic archives agree:

- To use these datasets solely for statistical analysis and reporting of aggregated information, and not for investigation of specific individuals or organizations, except when identification is authorized in writing by ICPSR
- To make no use of the identity of any person or establishment discovered inadvertently, and to advise ICPSR of any such discovery
- To produce no links among ICPSR datasets or among ICPSR data and other datasets that could identify individuals or organizations

Redistribution:

ICPSR data may not be redistributed or sold to other individuals, institutions, or organizations without the written agreement of ICPSR.

Title: Monitoring the Future: A Continuing Study of American Youth (8th- and

10th-Grade Surveys), 2002

ICPSR Study Number: 3752

Funding Agency: United States Department of Health and Human Services. National

Institute on Drug Abuse

Grant Number: DA-01411

Summary: These surveys of 8th- and 10th-grade students are part of a series that

explores changes in important values, behaviors, and lifestyle

orientations of contemporary American youth. Students in each grade are randomly assigned to complete one of four questionnaires, each with a different subset of topical questions but containing a set of "core" questions on demographics and drug use. There are about 300 variables across the questionnaires. Drugs covered by this survey include amphetamines (stimulants), barbiturates (tranquilizers), other prescription drugs, tobacco, alcohol, inhalants, steroids, marijuana, hashish, LSD, hallucinogens, cocaine, crack, and injection drugs such

as heroin.

Universe: Enrolled 8th- and 10th-grade students in the contiguous United States.

Sample: Multistage area probability sample design involving three selection

stages: (1) geographic areas or primary sampling units (PSUs), (2) schools (or linked groups of schools) within PSUs, and (3) students

within sampled schools. Of the 72 PSUs, 8 were selected with

certainty, 10 were selected with a probability of .50, and the remainder were selected with probability proportionate to the size of the 8th- or 10th- grade class. In schools with more than 350 students in the grade, a random sample of students or classes was drawn. In schools with

less than 350 students in a grade, all students were asked to

participate. Each school was asked to participate for two years so that

each year one-half of the sample is replaced. Schools refusing participation were replaced with similar schools in terms of geographic

location, size, and type of school (e.g., public, private/Catholic,

private/non-Catholic). For the 8th-grade survey, schools with less than 15 8th graders were excluded from the sample. For the 10th-grade survey, schools with less than 25 10th graders were excluded. The participation rate among schools has been between 66 and 80 percent

since the inception of the study.

Date of Collection: 2002

Response Rates: The student response rates for the 2002 8th- and 10th-grade surveys

were 91 percent and 85 percent, respectively.

Data Collection Notes:

(1) To protect the anonymity of respondents, all variables that could be used to identify individuals have been collapsed or recoded in the public use files. These modifications should not affect analytic uses of the public use files. (2) Two year-to-year cross-time question indices for the MTF 8th- and 10th-grade surveys can be viewed on the SAMHDA Web site. The first is sorted by question location and the second is sorted by subject area, item number, and questionnaire form. (3) The codebooks are provided by ICPSR as Portable Document Format (PDF) files. The PDF file format was developed by Adobe Systems Incorporated and can be accessed using PDF reader software, such as the Adobe Acrobat Reader. Information on how to obtain a copy of the Acrobat Reader is provided on the ICPSR and

SAMHDA Web sites.

Data Source: self-administered questionnaires

INTRODUCTION

DATA COLLECTION DESCRIPTION

MONITORING THE FUTURE: A CONTINUING STUDY OF THE LIFESTYLES AND VALUES OF YOUTH, 2002, GRADES 8 AND 10, is conducted by the University of Michigan's Institute for Social Research and receives its core funding under grants from the National Institute on Drug Abuse. (The responsible investigators are: Lloyd D. Johnston, principal investigator; Jerald G. Bachman and Patrick M. O'Malley, and John Schulenberg, co-principal investigators.) The research project is an unusually comprehensive one in several respects: surveys are conducted annually on an ongoing basis; the samples are large and nationally representative; results may be compared with those from other age groups also surveyed annually by the project; and the subject matter is very broad, encompassing altogether more than 450 variables per year.

The Monitoring the Future Project is designed to explore changes in many important values, behaviors, and lifestyle orientations of contemporary American youth. Two general types of tasks may be distinguished. The first is to provide a systematic and accurate description of the youth population of interest in a given year, and to quantify the direction and rate of the changes taking place among them over time. The second task, more analytic than descriptive, involves the explanation of the relationships and trends observed to exist.

DATA COLLECTION PROCEDURES

The basic research design involves annual data collections from eighth, tenth, and twelfth graders during the spring of each year. Procedures for the twelfth grade data collection are explained in detail elsewhere (1,2); the eighth and tenth grade samples were added in 1991 after 16 years of annual twelfth grade surveys and closely parallel those used for the high school seniors. Approximately 160 schools are sampled for the eighth grade survey, and approximately 18,000 to 19,000 students are surveyed. For the tenth graders, approximately 130 high schools are sampled, and approximately 16,000 students are surveyed.

A major exception to the similarities with the 12^{th} grade surveys is that in the $8^{th}/10^{th}$ grade surveys only two different questionnaire forms were used in 1991-1996 (this expanded to four forms beginning in 1997) rather than the six used with seniors. Identical forms are used for both eighth and tenth grades, and for the most part, questionnaire content is drawn from the twelfth-grade questionnaires. Thus, key demographic variables and measures of drug use and related attitudes and beliefs are generally identical for all three grades. However, many fewer questions about lifestyles and values are included in the $8^{th}/10^{th}$ grade forms, in part because the authors believe that many of these attitudes are likely to be more fully formed by twelfth grade and, therefore, are best monitored there.

A limitation to the study design is that two segments of the entire age-cohort are missing: those who are enrolled in school, but are absent on the day of data collection ("absentees"), and those who have dropped out of school ("dropouts").

Dropout rates are relatively low for 8th and 10th graders: dropouts are probably less than 1% in 8th grade, and less than 5% by 10th grade (1). Absentees comprise 9% of eighth graders and about 15% of tenth graders in 2002. Although absentees are likely to be somewhat different from non-absentees on a variety of dimensions, adjusting for their relatively small proportions would have only very modest

effects on population estimates. See the latest annual report for a more extended discussion of this issue (1).

SAMPLING INFORMATION

The procedure for securing nationally representative samples of eighth and tenth graders in public and private schools is a multistage one. Stage 1 is the selection of particular geographic areas, Stage 2 is the selection of one or more schools in each area, and Stage 3 is the selection of students within each school.

Stage 1: Geographic Areas. The geographic areas used in this study are the primary sampling units (PSUs) developed by the Sampling Section of the Survey Research Center for use in the Center's nationwide interview studies. Because these same PSUs are used for personal interview studies by the Survey Research Center (SRC), local field representatives can be assigned to administer the data collections in practically all schools.

Stage 2: Schools. In the major metropolitan areas more than one school is often included in the sampling design; in most other sampling areas a single school is sampled. In all cases, the selections of schools are made such that the probability of drawing a school is proportionate to the size of its eighth or tenth grade glass. The larger the class (according to recent records), the higher the selection probability assigned to the school. When a sampled school is unwilling to participate, a replacement school as similar to it as possible is selected from the same geographic area.

Stage 3: Students. Within each selected school, up to about 350 students may be included in the data collection. In schools with fewer than 350 students, the usual procedure is to include all of them in the data collection. In larger schools, a subset of students is selected either by randomly sampling classrooms or by some other random method that is convenient for the school and judged to be unbiased. Sample weights are assigned to each respondent so as to take account of variations in the sizes of samples from one school to another, as well as the (smaller) variations in selection probabilities occurring at the earlier stages of sampling. For a table of the sample size and student response rates see Appendix B.

One other important feature of the base-year sampling procedure should be noted here. All schools (except for half of the initial 1991 sample) are asked to participate in two data collections, thereby permitting replacement of half of the total sample of schools each year. One motivation for requesting that schools participate for two years is administrative efficiency; it is a costly and time-consuming procedure to secure the cooperation of schools, and a two-year period of participation cuts down that effort substantially. Another important advantage is that whenever an appreciable shift in scores from one class to the next is observed, it is possible to check whether that shift may be attributable to some differences in the newly sampled schools. This is done simply by repeating the analysis using only the schools which participated both years. Thus far, the half-sample approach has worked quite well and examination of drug prevalence data from the "matched half-samples" showed that the half samples of repeat schools yielded drug prevalence trends which were virtually identical to trends based on all schools.

School Recruiting Procedures. Early during the fall semester an initial contact is made with each sampled school. First a letter is sent to the principal describing the study and requesting permission to survey students. The letter is followed by a telephone call from a project staff member, who attempts to deal with any questions or problems and (when necessary) makes arrangements to contact and seek the permission from other school district officials. Basically the same procedures are followed for schools asked to participate for the second year.

Once the school's agreement to participate is obtained, arrangements are made by phone for administering the questionnaires. A specific date for the survey is mutually agreed upon and a local SRC representative is assigned to carry out the administration.

Advance Contact with Teachers and Students. The local SRC representative is instructed to visit the school two weeks ahead of the actual date of administration. This visit serves as an occasion to meet the teachers whose classes will be affected and to provide them with a brochure describing the study, a brief set of guidelines about the questionnaire administration, and a supply of flyers to be distributed to the students a week to 10 days in advance of the questionnaire administration. The guidelines to the teachers include a suggested announcement to students at the time the flyers are distributed.

From the students' standpoint, the first information about the study usually consists of the teacher's announcement and the short descriptive flyer. In announcing the study, the teachers are asked to stress that the questionnaires used in the survey are not tests, and that there are no right or wrong answers. The flyer tells the students that they will be invited to participate in the study, points out that their participation is strictly voluntary, and stresses confidentiality (including a reference to that fact that the Monitoring the Future project has a special government grant of confidentiality which allows their answers to be protected). The flyer also serves as an informative document which the students can show to their parents. Parental consent involves, at a minimum, the school mailing a letter to the parents describing the study and providing them an easy way to decline their child's participation, if they so wish. Active consent procedures are used when the school or district requires them.

Questionnaire Administration. The questionnaire administration in each school is carried out by the local SRC representatives and their assistants, following standardized procedures detailed in a project instruction manual. The questionnaires are administered in classrooms during normal class periods whenever possible, although circumstances in some schools require the use of larger group administrations. Teachers are not asked to do anything more than introduce the SRC staff members and (in most cases) remain in the classroom to help guarantee an orderly atmosphere for the survey. Teachers are urged to avoid walking around the room, so that students may feel free to write their answers without fear of being observed.

The actual process of completing the questionnaires is quite straightforward. Respondents are given sharpened pencils and asked to use them because the questionnaires are designed for automatic scanning. Most respondents can finish within a 45 minute class period; for those who cannot, an effort is made to provide a few minutes of additional time.

Procedures for Protecting Confidentiality. In any study that relies on voluntary reporting of drug use or other illegal acts, it is essential to develop procedures which guarantee the confidentiality of such reports. It is also desirable that these procedures be described adequately to respondents so that they are comfortable about providing honest answers.

The first information given to students about the survey consists of a descriptive flyer stressing the confidentiality and voluntary participation. This theme is repeated at the start of the questionnaire administration. Each participating student is instructed to read the message on the cover of the questionnaire, which stresses the importance and value of the study, notes that answers will be kept strictly confidential, states that the study is completely voluntary, and tells the student "If there is any question you or your parents would find objectionable for any reason, just leave it blank." From 1991 to 1998, the instructions pointed out that in a few months a summary of nationwide results will be mailed to all participants and also that a follow-up questionnaire will be sent to some students after a year. The

cover message explained that these are the reasons for asking that name and address be written on a special form which was removed from the questionnaire and handed in separately. The message also pointed out that the two different code numbers (one on the questionnaire and one on the tear-out form) cannot by matched except by a special computer tape at the University of Michigan.

The research design originally called for mail-out follow-up surveys of samples of the eighth and tenth graders participating in the study, carried out at two-year intervals similar to the twelfth grade follow-up samples. In 1997, it was decided to discontinue follow-up surveys; consequently, the original "confidential" procedures (in which names and addresses were obtained from all respondents) were changed to anonymous procedures (in which no names or addresses were obtained). To allow an assessment of the potential effect of the different procedures, half the schools (all those participating for a second year) were assigned to the confidential procedure in 1998, and half (all those participating in their first year) to the anonymous condition. Beginning in 1999, all eighth and tenth grade surveys were anonymous. The investigators concluded, based on early analyses, that this change in procedure had no effect on the reporting of sensitive information (i.e. drug use) by tenth graders, and little or no effect on eighth graders.

In order to protect the confidentiality of responses and the identity of respondents, a number of alterations have been made in the original dataset to prepare it for public release; these alterations are described later in the section "Processing Information."

CONTENT AREAS AND QUESTIONNAIRE DESIGN

Drug use and related attitudes are the topics which receive the most extensive coverage in the Monitoring the Future project; but the 8th/10th grade questionnaires also deal with a wide range of other subject areas, including educational aspirations, occupational aims, and marital and family plans, as well as a variety of background and demographic factors. These are listed below, along with their associated code letters by which all questions are organized in a cross-time index provided in the User guide for this collection. The same code letters have been assigned to each area as were used in the twelfth grade content index. Because not all of the areas covered in twelfth grade are included in grades 8/10, some letters in the sequence are missing here.

MEASUREMENT CONTENT AREAS

<i>A</i> .	Drugs. Drug use and related attitudes and beliefs, drug availability and exposure,
	surrounding conditions and social meaning of drug use. Views of significant others
	regarding drugs.
<i>B</i> .	Education. Educational lifestyle, values, experiences, and environments. Media usage.
C.	Work and Leisure. Vocational values, meaning of work and leisure, work and leisure
	activities, preferences regarding occupational characteristics and type of work setting.
D.	Gender Roles and Family. Values, attitudes, and expectations about marriage, family
	structure, sex roles, and gender discrimination.
<i>E</i> .	Population Concerns. Values, attitudes, and expectations about personal family plans.
	Concerns about overpopulation. Educational opportunities offered concerning family
	planning.
F.	Conservation, Materialism, Equity, etc. Values, attitudes, and expectations related to
	conservation, pollution, materialism, equity, and the sharing of resources. Preferences
	regarding type of dwelling and urbanicity.
G.	Religion. Religious affiliation, practices, and views.
I.	Social Change. Values, attitudes, and expectations about social change.
L.	Military. Personal plans for military service. Views about the armed services and the use
	of military force.
<i>M</i> .	Interpersonal Relationships. Qualitative and quantitative characteristics of cross-age and
	peer relationships. Interpersonal conflict.
<i>O</i> .	Concern for Others. Radius of concern for others; voluntary and charitable activities.
<i>P</i> .	Happiness. Happiness and life satisfaction, overall and in specific life domains.
Q.	Other Personality Variables. Attitudes about self (including self-esteem), locus of control,
	loneliness, risk-taking, optimism, trust in others, importance placed on various life goals.
R.	Background and School. Demographic and family background characteristics, curriculum
	and grades in school, victimization in school.
S.	Deviant Behavior and Victimization. Delinquent behaviors, seatbelt use, victimization
	experiences.
<i>T</i> .	Health habits and symptoms.

Because many questions are needed to cover all of these topic areas, much of the questionnaire content is divided into two (1991-1996) to four (1997 on) different questionnaire forms. *In 1997, the third and fourth questionnaire forms were added to allow for new questions to be included in the survey.* The questionnaires are distributed to participants in an ordered sequence. In 1991-1996, this produced two equivalent half-samples. Beginning in 1997, four forms were used: forms 1 and 2 were distributed to a random 33.3% (1/3) of students, and forms 3 and 4 were distributed to a random 16.7% (1/6) of students. Thus, a question could be answered by 1/6, 1/3, 1/2, 2/3, 5/6, or all of the sample, depending on which forms included that question.

About one-third of each questionnaire form consists of key or "core" variables which are common to all forms. All demographic variables and some measures of drug use are included in this "core" set of measures. This use of the full sample for drug and demographic measures provides a more accurate estimation on these dimensions and also makes it possible to link them statistically to all the other measures which are included in a single form only.

REPRESENTATIVENESS AND VALIDITY

The samples for this study are intended to be representative of eighth and tenth grade students attending private or public schools throughout the 48 contiguous states. It is useful to consider the extent to which the obtained samples of schools and students are likely to be representative of all eighth and tenth graders, and the degree to which the data obtained are likely to be valid.

It is possible to distinguish at least four ways in which survey data of this sort might fall short of being fully accurate. First, some sample schools refuse to participate, which could introduce some bias. Second, the failure to obtain questionnaire data from 100 percent of the students sampled in participating schools would also introduce bias. Third, the answers provided by participating students are open to both conscious and unconscious distortions which could reduce validity. Finally, limitations in sample size and/or design could place limits on the accuracy of estimates.

School Participation. As noted in the description of the sampling design, schools are invited to participate in the study for a two-year period. (With very few exceptions, each school which has participated for one data collection has agreed to participate for a second.) When an invited school declines to participate, a similar school (in terms of size, geographic area, urbanicity, etc.) is recruited as a replacement. The selection of replacement schools almost entirely removes problems of bias in region, urbanicity, and the like that might result from certain schools refusing to participate. Other potential biases are more subtle, however. For example, if it turned out that most schools with "drug problems" refused to participate, that would seriously bias the drug estimates derived from the sample. And if any other single factor were dominant in most refusals, that also might suggest a source of serious bias. In fact, however, the reasons for schools' refusals to participate are varied and largely a function of happenstance events of the particular year. Thus, the investigators feel confident that school refusals have not seriously biased the surveys.

Student Participation. Completed questionnaires are obtained from between 85% and 90% of all students sampled. The single most important reason that students are missed is that they are absent from class at the time of the data collection, and in most cases it is not workable to schedule a special follow-up data collection for them. Students with fairly high rates of absenteeism also report above-average rates of drug use; therefore, there is some degree of bias introduced by missing the absentees. That bias could be corrected through the use of special weighting; however, this course was not chosen because the bias in estimates (in drug use, where the potential effect was hypothesized to be largest) was determined to be quite small and because the necessary weighting procedures would have introduced undesirable complications. Of course, some students refuse to complete or turn in a questionnaire. However, SRC representatives in the field estimate this proportion to be less than one percent.

Validity of Self-Report Data. Survey measures of delinquency and of drug use depend upon respondents reporting what are, in many cases, illegal acts. Thus, a critical question is whether such self-reports are likely to be valid. Like most studies dealing with these areas, the present study does not include direct, objective validation of the present measures; however, the considerable amount of inferential evidence which exists strongly suggest that the self-report questions produce largely valid data. A number of factors have given the investigators reasonable confidence about the validity of the responses to what are presumably among the most sensitive questions in the study: a low non-response rate on the drug questions; a large proportion admitting to some illicit drug use; the consistency of findings across several years of the present study; strong evidence of construct validity (based on relationships observed between variables); a close match between these data and the findings from other studies using other methods; and the findings from several methodological studies which have used objective validation methods.

As for others of the measures, a few have a long and venerable history – as scholars of the relevant literature will recognize – though some of these measures have been modified to fit the present questionnaire format. Many questions, however, have been developed specifically for this project through a process of question writing, pilot testing, pretesting, and question revision or elimination.

Accuracy of the Sample. A sample survey never can provide the same level of accuracy as would be obtained if the entire target population were to participate in the survey. But perfect accuracy of this sort would be extremely expensive and certainly not worthwhile considering the fact that a high level of accuracy can be provided by a carefully designed probability sample. The accuracy of the sample in this study is affected both by the size of the student sample and by the number of schools in which they were clustered. For the purposes of this introduction, it is sufficient to note that virtually all estimates based on the total samples of both grades have confidence intervals of 1.6% -- sometimes considerably smaller. This means that, had the project been able to invite all schools and all eighth or tenth graders in the 48 contiguous states to participate, the results from such a massive survey would be within an estimated 1.6 percentage points from the present sample findings 95 times out of 100. This is a quite high level of accuracy, and one that permits the detection of fairly small trends from one year to the next.

Because of the complex sampling design, standard means of assessing confidence intervals are not appropriate. The annual volumes from the project provide information which allows the analyst to determine the confidence intervals around means and percentages for both the total sample and various subgroups. They also provide tables and guidelines for testing the statistical significance of differences between subgroups, and the significance of year-to-year changes (1).

Consistency and the Measurement of Trends. One other point is worth noting in a discussion of the validity of the findings. The Monitoring the Future project is, by intention, a study designed to be sensitive to changes from one time to another. Accordingly, the measures and procedures have been standardized and applied consistently across each data collection. To the extent that any biases remain because of limits in school and/or student participation, and to the extent that there are distortions (lack of validity) in the responses of some students, it seems very likely that such problems will exist in much the same way from one year to the next. In other words, biases in the survey estimates should tend to be consistent from one year to another, which means that the measurement of trends should be affected very little by such biases.

Interpreting Racial Differences. Ethnic identification is provided for the two largest racial/ethnic subgroups in the population – those who identify themselves as white or Caucasian and those who identify themselves as black or African-American. Identification is not given for the other ethnic categories (American Indian [Native American Indian], Asian American, Mexican American or Chicano, Cuban American, Puerto Rican American, or other Latin American) since each of these groups comprises less than three percent of the sample in any given year, which means that their small Ns (in combination with their clustered groupings in a limited number of schools) would yield estimate which would be too unreliable. In fact, even blacks – who constitute approximately 12 percent of each year's sample – are represented by fewer than 900 respondents per year on any single questionnaire form (and after 1996, when 2 forms were added, about 300 to 570). Further, because our sample is a stratified clustered sample, it yields less accuracy than would be yielded by a pure random sample of equal size (see Appendix B of the annual volumes [1] for details). Therefore, because of the limited number of cases, the margin of sampling error around any statistic describing blacks is larger than for most other subgroups.

There exists, however, a way to determine the replicability of any finding involving racial comparisons. Since most questions are repeated from year to year, one can readily establish the degree to which a finding is replicated by looking at the results in prior and subsequent years. Given the relatively

small Ns for blacks, the analyst is urged to seek such replication before putting much faith in the reliability of any particular racial comparison. Combining data for multiple years is another approach.

There are factors in addition to reliability, however, which could be misleading in the interpretation of racial differences. Given the social importance which has been placed on various racial differences reported in the social science literature, the investigators would like to caution the analyst to consider the various factors which could account for differences. These factors fall into three categories: differential representation in the sample, differential response tendencies, and confounding of race with a number of other background and demographic characteristics.

Differential Representation. Census data characterizing American young people in the approximate age range of those in this sample show somewhat lower proportions of blacks than white remain in school through the end of the twelfth grade.¹ Therefore, a slightly different segment of the black population than of the white population resides in the target population of high school seniors. It is less clear to what extent there may be differential representation at the 8th and 10th grade levels. It may be that there is very little underrepresentation in 8th grade, because very few students drop out of school before the end of 8th grade; somewhat more, though still relatively few, may drop out by near the end of 10th grade, and that could be differential by race.

Differential Response Tendencies. In examining the full range of variables, racial differences in response tendencies among high school seniors have been noted. First, the tendency to state agreement in response to agree-disagree questions is generally somewhat greater among blacks than among whites. For example, blacks tend to agree more with the positively worded items in the index of self-esteem, but they also tend to agree more with the negatively worded items. As it happens, that particular index has an equal number of positively and negatively worded items, so that any overall "agreement bias" should be self-canceling when the index is computed. However, group differences in agreement bias are likely to affect results on questions employing the agree-disagree format. Fortunately, most of the questions are not of that type.

There has also been observed a somewhat greater than average tendency for black respondents to select extreme answer categories on attitudinal scales. For example, even if the same proportion of blacks as whites felt positively (or negatively) about some subject, fewer of the whites are likely to say they feel very positively (or negatively). The analyst should be aware that differences in responses to particular questions may be related to these more general tendencies.

A somewhat separate issue in response tendency is a respondent's willingness to answer particular questions. The missing data rate may be an indication of that unwillingness. If a particular question or set of questions has a missing data rate higher than is true for the prior set of questions, then presumably more respondents than usual were unwilling (or perhaps unable) to answer it. Such an exaggerated missing data rate has been found for black male seniors on the set of questions dealing with the respondent's own use of illicit drugs. Clearly a respondent's willingness to be candid on such questions depends on his or her trust of the research process and of the researchers themselves. The exaggerated missing data rates for black males in these sections may reflect, at least in part, less trust. The analyst is advised to check for exceptional levels of missing data when making comparisons on any variable in which candor is likely to be reduced by lower system trust. One bit of additional evidence related to trust in the research process is that higher proportions of black seniors than white seniors reported that if they had used marijuana or heroin they would not have been willing to report it in the survey.

¹ Hispanics, the third largest racial/ethnic group, have considerably higher dropout rates than either whites or blacks, which means that student samples become increasingly less representative of the entire age group at higher grades.

Covariance with Other Factors. Some characteristics such as race are highly confounded (correlated) with other variables – variables which may in fact explain some observed racial differences. Put another way, at the aggregate level we might observe a considerable racial difference on some characteristic, but once we control for some background characteristic such as socioeconomic level or region of the country – that is, once we compare the black respondents with white who come from similar backgrounds – there may be no racial difference at all.

Race is correlated with important background and demographic variables. A higher proportion of blacks live in the South and a higher proportion grew up in families with the mother and/or father absent, and more had mothers who worked while they were growing up. A substantially higher proportion of blacks are Baptists, and blacks tend to attribute more importance to religion than do whites.

These differences in background, demographic, and ascriptive characteristics are noted because, in any attempt to understand why a racial difference exists, one would want to be able to examine the role of these covarying characteristics.

WEIGHTING INFORMATION

The codebook frequencies have been weighted using variable V5.

FILE STRUCTURE

MONITORING THE FUTURE: A CONTINUING STUDY OF AMERICAN YOUTH (8TH-AND 10TH-GRADE SURVEYS), 2002 is available from ICPSR as eight logical record length datasets. Each dataset consists of SAS and SPSS data definition statements containing all technical information for each variable in the corresponding datafile, and the datafile itself. The data are sorted by case. The datasets are organized by the form number (questionnaire version) used.

Part #	Form	#Variables	Logical record length	Unweighted N
Part 1	8 th Grade, Form 1	293	593	5166
Part 2	8 th Grade, Form 2	290	587	5137
Part 3	8 th Grade, Form 3	287	581	2614
Part 4	8 th Grade, Form 4	278	563	2572
Part 5	10 th Grade, Form 1	294	595	4896
Part 6	10 th Grade, Form 2	291	589	4880
Part 7	10 th Grade, Form 3	288	583	2443
Part 8	10 th Grade, Form 4	279	565	2464

The SAS and SPSS data definition statements give the format and other information for each variable in the data file. See the section "Codebook Information" for further details. The data file is constructed with a single logical record for each case.

CODEBOOK INFORMATION

The codebook is arranged by question numbers which do not coincide with the variable numbers.

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear but are references to the descriptions which follow this example.

[1] V1134 [2] 991A13 KIND OF PAID JOB

- [3] Item Number: 25160
- [4] A13: Which ONE of the job categories below comes closest to the kind of work you have done for pay on your current (or most recent) job? (If more than one kind of work, choose the one where you worked the most hours. Do not include work around the house.)

[5]	[6]	[7]	[8]	[9]

4.4	4.2	241	8	FARM WK
2.1	2.0	115	9	SALES WK
1.3	1.2	69	10	OFFICE
3.7	3.5	202	11	ODD JOBS
15.3	14.6	838	12	OTHER
	3.3	190	0	
	1.6	94	99	
[10]	[11]	[1	.2]	
100.0	100.0	5,745	cases	(Wtd)

- [13] Data type: numeric
- [14] Decimals: 0
- [15] Missing-data codes: 0,99
- [16] Columns: 98-99

[1] Indicates the variable number. A variable number is assigned to each variable in the data collection.

- [2] Indicates the abbreviated variable name used to identify the variable for the user.
- [3] The item number, a unique 5-digit reference number assigned to each question which remains consistent across questionnaires.

- [4] This is the full text (question) supplied by the investigator to describe this (section of) variable(s). The question text and the numbers and letters that may appear at the beginning reflect the original wording of the questionnaire item.
- [5] Indicates the weighted percentage distribution of each code value for this variable excluding cases where the value is missing.
- [6] Indicates the weighted percentage distribution of each code value for this variable including cases where the value is missing.
- [7] Indicates the weighted frequency of occurrence of each code value for this variable.
- [8] Indicates the code values occurring in the data for this variable.
- [9] Indicates the textual definitions of the codes for this variable
- [10] Indicates the total of the valid case percentages (100%).
- [11] Indicates the total of all case percentages (100%).
- [12] Indicates the number of cases (weighted) for this variable (including the missing cases).
- [13] Indicates the variable type. NUMERIC variables contain numbers only, including numbers in E-notation, a decimal point or a minus sign. CHARACTER variables can be any special characters: underscores (_), pound signs (#), and ampersands (&).
- [14] Indicates the number of decimal places in the variable.
- [15] Indicates the code values of missing data. In this example, code values equal to 9 are missing data (MD Codes: 9). Some analysis software packages require that certain types of data which the user desires to be excluded from analysis be designated as "MISSING DATA," e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although these codes are defined as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.
- [16] Indicates starting and ending column locations of this variable. In this example, the variable named "991A13 KIND OF PAID JOB" begins in the 98th and ends in the 99th column within the record.

PROCESSING INFORMATION

The data collection was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to missing data values. Consistency checks were performed.

NOTE: THE "cases (Wtd)" IN THE CODEBOOK INCLUDES MISSING DATA ON THE QUESTION INVOLVED.

The N sizes and the percentage distributions are the result of using a weight variable, V5. For reasons of confidentiality, this variable was altered from its full version to a bracketed version prior to public distribution of the data; THIS RESULTS IN SLIGHT DISCREPANCIES BETWEEN THE PERCENTAGES AND N SIZES IN THE ANNUAL ISR VOLUMES AND IN THE PUBLIC USE DATASETS. Typically, the variation is less than 1%.

In order to protect the confidentiality of responses and the identity of respondents, a number of alterations and omissions have been made in the original dataset to prepare it for public release. Three variables have been included to describe the respondent's general environment without identifying school or state. These are (1) region (Northeast, North Central, South, and West), (2) whether or not the school is located in a Metropolitan Statistical Area (MSA), and (3) whether or not the school is located in a self-representing MSA. Some questions have been eliminated altogether; others are collapsed to mask groups which are very small. The following table lists the question numbers and names of the variables which have been excluded from each eighth and tenth grade dataset.

Omitted Variables:

```
Forms 1 to 4
            C01. R'S BIRTH YEAR
Forms 1 to 4
            C02 R'S BIRTH MONTH
Forms 1 to 4
            C05. FIRST LANGUAGE
Forms 1 to 4
            C07e-h. R'S HSHLD (other than mother/father/sibling)
Forms 1 to 4
            C12a. R'S RELGS PRFNC
Form 2
            E03. CURRENT HEIGHT
Form 2
            E04. CURRENT WEIGHT
Form 2
            E07 ZIP CODE (5 DIGIT)
Form 4
            E02. CURRENT HEIGHT
Form 4
            E03. CURRENT WEIGHT
Form 4
            E05 ZIP CODE (5 DIGIT)
```

The variables that have been retained but altered to insure confidentiality follow.

Forms 1-4 R'S ID - SERIAL

5 digit code exclusive to each grade; modified to protect respondent confidentiality

Forms 1-4 Sampling Weight

Originally varied by school but modified to protect respondent confidentiality; use for all analyses, results of which will differ slightly from published data tables using original data

AGE <> 16 DICHOTOMY (10th grade only):

1=younger than 16 years old,

2=16 years old or more

-9=missing data on birth year or birth month

Note on construction. If Q.C01 (Birth Year) is coded to mean the year which, subtracted from the year of administration variable, would be 16, then month of questionnaire administration (derived from date of administration) is compared to Q.C02 (Birth Month). If month of administration is before month of birth, or if both are the same month, then the respondent is determined to be younger than 16.

C03. R'S RACE

0=WHITE, 1=BLACK, -9=All Other Codes and missing data on Q. C03

C07a-c. R'S HSHLD FATHER, MOTHER, SIBLING

0=marked, 1=not marked, -9=none of the three items marked

Sibling combines responses to originally separate questions about brother and sister, then after these and the remaining "HSHLD" items were deleted, missing data on C07a, b, and new c was redetermined.

C22. EVER HELD BACK

Dichotomized to 0=NO, 1=YES, -9=missing

C23. NEED SUMMER SCHL

Dichotomized to 0=NO, 1=YES, -9=missing

C24. EVER SUSPENDED

Dichotomized to 0=NO, 1=YES, -9=missing

Beginning in 1997, a select group of questions were excluded from some schools in the Western region, rendering those schools potentially identifiable. Thus, these variables were intentionally changed to missing data (coded -9) from all schools in the Western region of the contiguous United States:

APPENDICES

APPENDIX A: PUBLICATIONS

ANNUAL VOLUMES CONTAINING COMPLETE RESPONSE DISTRIBUTIONS

(Published by the Institute for Social Research)

These volumes contain univariate and selected bivariate percentagized frequency distributions on all questions asked in a given year. Also contained is a cross-time index for locating the same question in the other years of the study in which it was contained. Order directly from Monitoring the Future, Institute for Social Research Room 2311, P. O. Box 1248, Ann Arbor, Michigan 48106-1248.

- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1975. L. D. Johnston and J. G. Bachman, 1980, 188 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1976. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 1980, 264 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1977. L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1980, 266 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1978. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 1980, 266 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1979. L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1980, 266 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1980. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 1981, 266 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1981. L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1982, 268 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1982. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 1984, 280 pp.

- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1993. L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1995, 339 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1994. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 1997, 341 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1995. L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1997, 341 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1996. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 2001, 376 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1997. L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 2001, 378 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1998. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 2001, 378 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1999. L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 2001, 378 pp.
- Monitoring the Future: Questionnaire responses from the nation's high school seniors, 2000. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 2001, 380 pp.

ANNUAL VOLUMES ON TRENDS IN DRUG USE AND RELATED FACTORS

(Published by the National Institute on Drug Abuse)

- Volumes in this series may be ordered from the National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20847-2345 (Tel. 1-800-729-6686). There is no charge for single copies.
- Drug use among American high school students 1975-1977 (DHEW Publication No. ADM 78-619). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1978, 256 pp.
- *Highlights from drug use among American high school students 1975-1977* (DHEW Publication No. ADM 78-621). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1978, 43 pp.
- Drugs and the class of 1978: Behaviors, attitudes, and recent national trends (DHEW Publication No. ADM 79-877). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1979, 376 pp.
- Highlights from drugs and the class of 1978: Behaviors, attitudes, and recent national trends (DHEW Publication No. ADM 79-878). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1979, 62 pp.
- 1979 Highlights: Drugs and the nation's high school students, Five year national trends (DHEW Publication No. ADM 80-930). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1979, 85 pp.
- Highlights from student drug use in America, 1975-1980 (DHHS Publication No. ADM 81-1066). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1981, 120 pp.
- Highlights from student drug use in America, 1975-1981 (DHHS Publication No. ADM 82-1208). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1981, 130 pp.
- Student drug use in America, 1975-1981 (DHHS Publication No. ADM 89-1221). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1982, 433 pp.
- Student drug use, attitudes, and beliefs: National trends, 1975-1982 (DHHS Publication No. ADM 83-1260). L. D. Johnston, J. G. Bachman, and P. M. O'Malley, 1983, 134 pp.
- Highlights from drugs and American high school students, 1975-1983 (DHHS Publication No. ADM 84-1317). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1984, 135 pp.
- Drugs and American high school students: 1975-1983 (DHHS Publication No. ADM 85-1374). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1984, 492 pp.
- *Use of licit and illicit drugs by America's high school students:* 1975-1984 (DHHS Publication No. ADM 85-1394). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1985, 167 pp.
- Drug use among American high school students, college students, and other young adults: National trends through 1985 (DHHS Publication No. ADM 86-1450). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1986, 237 pp.
- National trends in drug use and related factors among American high school students and young adults, 1975-1986 (DHHS Publication No. ADM 87-1535). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1987, 265 pp.
- Illicit drug use, smoking, and drinking by America's high school students, college students, and young adults: 1975-1987 (DHHS Publication No. ADM 89-1602). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1988, 307 pp.
- Drug use, drinking, and smoking: National survey results from high school, college, and young adult populations, 1975-1988 (DHHS Publication No. ADM 89-1638). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1989, 339 pp.
- Trends in drug use and associated factors among American high school students, college students, and young adults: 1975-1989 (Institute for Social Research: Ann Arbor, MI). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1991, 331 pp.
- Drug use among American high school seniors, college students and young adults, 1975-1990, Volume 1: High school seniors (DHHS Publication No. (ADM) 91-1813). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1991, 199 pp.
- Drug use among American high school seniors, college students and young adults, 1975-1990, Volume II: College students and young adults (DHHS Publication No. (ADM) 91-1835). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1991, 168 pp.

- Smoking, drinking, and illicit drug use among American secondary school students, college students, and young adults, 1975-1991. Volume I: Secondary school students (DHHS Pub. No. (NIH) 93-3481). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1992, 231 pp.
- Smoking, drinking, and illicit drug use among American secondary school students, college students, and young adults, 1975-1991. Volume II: College students and young adults (DHHS Pub. No. (NIH) 93-3481). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1992, 176 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1992. Volume I: Secondary school students (NIH Pub. No. 93-3597). L. D. Johnston, P. M. O'Malley, & J. G. Bachman, 1993, 269 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1992. Volume II: College students and young adults (NIH Pub. No. 93-3598). L. D. Johnston, P. M. O'Malley, & J. G. Bachman, 1993, 190 pp.
- National survey results on drug use from the Monitoring the Future study 1975-1993. Volume I: Secondary school students (NIH Pub. No. 94-3809). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1994, 281 pp.
- National survey results on drug use from the Monitoring the Future study 1975-1993. Volume II: College students and young adults (NIH Pub. No. 94-3810). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1994, 189 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1994. Volume I: Secondary school students (NIH Pub. No. 95-4026). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1995, 327 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1994. Volume II: College students and young adults (NIH Pub. No. 96-4027). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1996, 189 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1995. Volume I: Secondary school students (NIH Pub. No. 96-4139). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1996, 381 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1995. Volume II: College students and young adults (NIH Pub. No. 98-4140). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1998, 188 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1997. Volume I: Secondary school students (NIH Pub. No. 98-4345). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1998, 433 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1997. Volume II: College students and young adults. (NIH Pub. No. 98-4346). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1998, 206 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1998. Volume I: Secondary school students (NIH Pub. No. 99-4660). L. D. Johnston, P. M. O'Malley, & J. G. Bachman, 1999, 420 pp.
- National survey results on drug use from the Monitoring the Future study, 1975-1998. Volume II: College students and young adults (NIH Pub. No. 99-4661). L. D. Johnston, P. M. O'Malley, & J. G. Bachman, 1999, 218 pp.
- Monitoring the Future national results on adolescent drug use: Overview of key findings, 1999. (NIH Pub. No. 00-4690). L. D. Johnston, P. M. O'Malley, & J. G. Bachman, 2000, 56 pp.
- Monitoring the Future national survey results on drug use, 1975-1999. Volume I: Secondary school students (NIH Pub. No. 00-4802). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2000, 480 pp.
- Monitoring the Future national survey results on drug use, 1975-1999. Volume II: College students and adults ages 19-40 (NIH Pub. No. 00-4803). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2000, 240 pp.
- Monitoring the Future national results on adolescent drug use: Overview of key findings, 2000 (NIH Pub. No. 01-4923). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2001, 54 pp.
- Monitoring the Future national survey results on drug use, 1975-2000. Volume I: Secondary school students (NIH Pub. No. 01-4924). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2001, 492 pp.
- Monitoring the Future national survey results on drug use, 1975-2000. Volume II: College students and adults ages 19-40 (NIH Pub. No. 01-4925). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2001, 238 pp.
- Monitoring the Future national results on adolescent drug use: Overview of key findings, 2001 (NIH Pub. No. 02-5105). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2002, 57 pp.

- Monitoring the Future national survey results on drug use, 1975-2001. Volume I: Secondary school students (NIH Pub. No. 02-5106). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2002, 530 pp.
- Monitoring the Future national survey results on drug use, 1975-2001. Volume II: College students and adults ages 19-40 (NIH Pub. No. 02-5107). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2002, 242 pp.
- Monitoring the Future national results on adolescent drug use: Overview of key findings, 2002 (NIH Pub. No. 03-5374). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2003, 56 pp.
- Monitoring the Future national survey results on drug use, 1975-2002. Volume I: Secondary school students (NIH Pub. No. 03-5375). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2003, 520 pp.
- Monitoring the Future national survey results on drug use, 1975-2002. Volume II: College students and adults ages 19-40 (NIH Pub. No. 03-5376). L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 2003, 265 pp.

TESTIMONY

- Johnston, L. D. (2002, June 25). Written and oral testimony presented at hearings on the National Youth Anti-Drug Media Campaign, held by the Subcommittee for Criminal Justice, Drug Policy, and Human Resources, of the Committee on Government Reform, U. S. House of Representatives. Published in *The Congressional Record*.
- Johnston, L. D. (2002, June 20). Written testimony on the National Youth Media Anti-Drug Media Campaign for the Subcommittee on Treasury, Postal Service, and General Government of the House Appropriations Committee, U.S. House of Representatives. Published in *The Congressional Record*.
- Johnston, L. D. (2002, June 19). Written and oral testimony presented at hearings on the National Youth Anti-Drug Media Campaign, held by the Treasury and General Government Subcommittee on Appropriations of the U.S. Senate Appropriations Committee. Published in *The Congressional Record*.
- Johnston, L. D. (2000, Sept. 19). Written and oral testimony presented at hearings on "Drug trends in America," held by the House Subcommittee on Criminal Justice, Drug Policy, and Human Resources, of the Government Reform Committee, U.S. House of Representatives. Published in the Congressional Record.
- Johnston, L. D. (1999, October 14). Written and oral testimony presented before the House Subcommittee on Criminal Justice, Drug Policy, and Human Resources in oversight hearings on the National Youth Media Anti-Drug Campaign. Published in *The Congressional Record*.
- Johnston, L. D. (1995, December 19). Written and oral testimony presented to the Judiciary Committee, United States Senate, at a hearing on Recent trends in youthful drug use. Published in *The Congressional Record*.
- Johnston, L. D. (1995, November 9). Written and oral testimony presented before the Committee on Governmental Affairs, United States Senate, at hearings on H.R. 1271, The Family Privacy Protection Act. Published in *The Congressional Record*.
- Johnston, L. D. (1993, March 31). The continuing need for prevention at the school and community levels. Delivered before the House Subcommittee on Select Education and Civil Rights, on the reauthorization of the Drug-Free Schools and Communities Act. In *The Congressional Record*.
- Johnston, L. D. (1995, March 16). Problems which would be created by H.R. 11, Title IV, The Family Privacy Protection Act. Written and oral testimony delivered to the House Subcommittee on Government Management, Information, and Technology in hearings on H.R. 11. Published in The Congressional Record.
- Johnston, L. D. (1991, November 15). Advertising and tobacco use: Some considerations. Prepared testimony delivered before the Consumer Subcommittee of the Senate Committee on Commerce, Science, and Transportation in hearings on the Tobacco Product Education and Health Protection Act of 1991. Published in *The Congressional Record*, Washington: GPO ISBN 0-16-039764-2, pp. 44-53.
- Johnston, L. D. (1988, June 16). The need for a shift in national strategy toward drug abuse prevention. Prepared testimony delivered before the Senate Committee on Labor and Human Relations in hearings on drug abuse prevention, education, and treatment. Published in *The Congressional Record*, 134:89, D774.
- Johnston, L. D. (1988, June 14). Demand reduction in the war on drugs: Some recommendations. Prepared testimony delivered before the Senate Armed Services Committee in hearings on the relationship between demand reduction and the role of the military in addressing the problem of drug abuse. Published in *The Congressional Record*, 134:87, D756.
- Johnston, L. D. (1986, August 1). Adolescent smoking and the issue of cigarette advertising. Prepared testimony delivered before the House Subcommittee on Health and the Environment, in oversight hearings on cigarette advertising and promotion. Published in *Advertising of tobacco products* (pp. 860-886). Washington, DC: GPO (Serial No. 99-167).
- Johnston, L. D. (1985, May 21). Adolescent alcohol use and the fairness doctrine. Prepared testimony delivered before the House Subcommittee on Telecommunications, Consumer Protection, and Finance. Published in *Beer and wine advertising: Impact of electronic media* (pp. 372-387). Washington, DC: GPO (Serial No. 99-16).
- Johnston, L. D. (1985, February 7). Alcohol advertising and trends in alcohol consumption. Prepared testimony delivered before the Senate Subcommittee on Alcohol and Drug Abuse. Published in *Alcohol Advertising* (pp. 312-324). Washington, DC: GPO (Serial No. 99-16).

- Johnston, L. D. (1980). Marijuana use and the effects of marijuana decriminalization. Prepared testimony delivered before the Senate Subcommittee on Criminal Justice. In *Health consequences of marijuana use* (pp. 51-70). Washington, DC: GPO (Serial No. 96-54).
- O'Malley, P. M., & Johnston, L. D. (1988, March). Drinking and driving among American high school seniors: Extent and nature of the problems. Prepared testimony delivered at hearing on the problem of drinking and driving held by the National Commission Against Drunk Driving and the National Highway Safety Transportation Administration, Fort Worth, TX, 9 pp. (Available from the authors.)

MONITORING THE FUTURE OCCASIONAL PAPERS

(Published by the Project)

Paper No.

- 1. The Monitoring the Future project: Design and procedures. J. G. Bachman and L. D. Johnston, 1978, 67 pp.
- 2. Concern for others and its relationship to specific attitudes on race relations, sex roles, ecology, and population control. A. R. Herzog, J. G. Bachman, and L. D. Johnston, 1978, 42 pp.
- 3. High school seniors' preferences for sharing work and family responsibilities between husband and wife. A. R. Herzog, J. G. Bachman, and L. D. Johnston, 1979, 58 pp.
- 4. Fewer rebels, fewer causes: A profile of today's college freshmen. J. G. Bachman and L. D. Johnston, 1979, 30 pp.
- 5. Developing composite measures of drug use: Comparisons among lifetime, annual, and monthly prevalence reports for thirteen classes of drugs. J. G. Bachman, P. M. O'Malley, and L. D. Johnston, 1979, 64 pp.
- 6. Description of a special survey using a single combined form of the Monitoring the Future questionnaires. A. R. Herzog and J. G. Bachman, 1979, 35 pp.
- 7. Ecological concerns among high school seniors: 1976-1979. J. D. Miller and J. G. Bachman, 1980, 28 pp.
- 8. Correlates of drug use, part I: Selected measures of background, recent experiences, and lifestyle orientations. J. G. Bachman, P. M. O'Malley, and L. D. Johnston, 1980, 134 pp.
- 9. When four months equal a year: An exploration of inconsistencies in students' monthly versus yearly reports of drug use. J. G. Bachman and P. M. O'Malley, 1980, 12 pp.
- 10. High school seniors' occupational plans and values: Trends in sex differences 1976 through 1980. A. R. Herzog, 1980. (Available in reprint from Sociology of Education, 1982, 13 pp.)
- 11. Changes in drug use after high school as a function of role status and social environment. J. G. Bachman, P. M. O'Malley, and L. D. Johnston, 1981, 92 pp.
- 12. Trends in high school seniors' views of the military. J. G. Bachman, 1981, 28 pp.
- 13. Marijuana decriminalization: The impact on youth 1975-1980. L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1981, 85 pp.
- 14. Period, age, and cohort effects on substance use among American youth 1976-1982. P. M. O'Malley, J. G. Bachman, and L. D. Johnston, 1983, 50 pp.
- 15. Student drug use, attitudes, and beliefs in the Department of Defense Dependent Schools class of 1982. L. D. Johnston, P. M. O'Malley, and M. L. Davis-Sacks, 1983, 72 pp.
- 16. The impacts of response styles on black-white differences in self-esteem: An analysis of six samples of youth. J. G. Bachman and P. M. O'Malley, 1983, 30 pp.
- 17. The Monitoring the Future follow-up surveys: A description of key experiences during the first years after high school. J. G. Bachman, L. D. Johnston, P. M. O'Malley, and D. E. Bare, 1985, 135 pp.
- 18. Changes in marijuana use linked to changes in perceived risks and disapproval. J. G. Bachman, L. D. Johnston, P. M. O'Malley, and R. H. Humphrey, 1986, 28 pp.
- 19. Correlates of employment among high school seniors. J. G. Bachman, D. E. Bare, and E. I. Frankie, 1986, 105 pp.
- 20. Change and consistency in the correlates of drug use among high school seniors: 1975-1986. J. G. Bachman, P. M. O'Malley, and L. D. Johnston, 1986, 21 pp.
- 21. Differentiation of period, age, and cohort effects on drug use 1976-1986. P. M. O'Malley, J. G. Bachman, and L. D. Johnston, 1988, 62 pp.
- 22. Sex differences in adolescents' health-threatening behaviors: What accounts for them? A. R. Herzog, J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 1987, 36 pp.
- 23. Student drug use in America: Differences among high schools 1986-1987. P. M. O'Malley, J. G. Bachman, and L. D. Johnston, 1988, 37 pp.

- 24. Drug use among American college students and their noncollege age peers. L. D. Johnston, P. M. O'Malley, and J. G. Bachman, 1988, 40 pp.
- 25. Reducing drug use in America: A perspective, a strategy, and some promising approaches. L. D. Johnston, 1988, 57 pp.
- 26. Minimum drinking age laws effects on American youth 1976-1987. P. M. O'Malley and A. C. Wagenaar, 1990, 68 pp.
- 27. Linking trends in cocaine use to perceived risks, disapproval, and lifestyle factors: An analysis of high school seniors, 1976-1988. J. G. Bachman, L. D. Johnston, and P. M. O'Malley, 1990, 42 pp.
- 28. Drug use among black, white, Hispanic, native American, and Asian American high school seniors (1976-1989): Prevalence, trends, and correlates. J. G. Bachman, J. M. Wallace, Jr., C. Kurth, L. D. Johnston, and P. M. O'Malley, 1990, 63 pp.
- 29. The second worldwide survey of drug and alcohol use among students in the Department of Defense dependents school system 1982-1987. L. D. Johnston, P. M. O'Malley, and L. D. Harrison, 1989, 104 pp.

APPENDIX B: SAMPLE SIZE AND STUDENT RESPONSE RATES

The three-stage sample procedure described in the introduction yielded the following number of participating schools and students.

	Eighth Grade						
	1991	1992	1993	1994	1995	1996	1997
Number public schools	131	133	126	116	118	122	125
Number private schools	31	26	30	34	34	30	27
Total number schools	162	159	156	150	152	152	152
Total number students	17,844	19,015	18,820	17,708	17,929	18,368	19,066
Student response rate	90%	90%	90%	89%	89%	91%	89%

Eighth Grade (Continued)

	1998	1999	2000	2001	2002
Number public schools	122	120	125	125	115
Number private schools	27	30	31	28	26
Total number schools	149	150	156	153	141
Total number students	18,667	17,287	17,311	16,756	15,489
Student response rate	88%	87%	89%	90%	91%
	,	*	<i>'</i>	*	· ·

_	Tenth Grade						
	1991	1992	1993	1994	1995	1996	1997
Number public schools	107	106	111	116	117	113	113
Number private schools	14	19	17	14	22	20	18
Total number schools	121	125	128	130	139	133	131
