BIBLIOGRAPHIC CITATION

Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications. The bibliographic citation for this data collection is:

Reif, Karlheinz, and Anna Melich. EURO-BAROMETER 34.0: PERCEPTIONS OF THE EUROPEAN COMMUNITY, AND EMPLOYMENT PATTERNS AND CHILD REARING, OCTOBER-NOVEMBER 1990 [Computer file]. Conducted by INRA (Europe), Brussels, and Norwegian Social Science Data Services (NSD). 2nd ICPSR ed. Cologne, Germany: Zentralarchiv fur Empirische Sozialforschung/Ann Arbor, MI: Inter-university Consortium for Political and Social Research [producers and distributors], 2001.

REQUEST FOR INFORMATION ON USE OF ICPSR RESOURCES

To provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR/ZA/SSD participants' research activities, users of ICPSR/ZA/SSD data are requested to send to ICPSR, ZA or SSD bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data were used.

DATA DISCLAIMER

The original collectors of the data, ICPSR, ZA, SSD, and the relevant funding agencies bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

The Commission of the European Community has no responsibility whatsoever with respect to the NSD Norwegian Eurobarometer operations. The "Surveys, Research, Analyses" (Eurobarometer) unit of the Commission welcomed the NSD

initiative and provided NSD with the necessary technical assistance, but all responsibility lies with NSD.

Preliminary Remark

As a result of the increased number and volume of recent surveys connected with the Eurobarometer survey series, the Inter-university Consortium for Political and Social Research (ICPSR) and the Zentralarchiv fuer Empirische Sozialforschung (ZA) entered into a cooperative arrangement for the production and distribution of these important data collections. In conjunction with the entrance of Sweden into the European Union in 1995 the Swedish Social Science Data Services (SSD) joined this cooperative effort as well. In sharing the responsibility for Eurobarometer processing, the cooperating archives ensure that all users receive Eurobarometer data sets and codebooks in standard formats, although each archive will employ its own study numbers. The present codebook is a product of this joint endeavour.

Since this cooperation presupposes common standards for data and codebook preparation, the formatting may in some details diverge from the usual ICPSR, ZA, or SSD standards. For example, all frequency tables in this codebook are based on unweighted data, while earlier ICPSR codebooks generally contain only weighted frequency counts.

While Euro-Barometer 34.0 pre-dates the cooperative arrangement, the final version of this study was produced after the agreement. ZA produced the interim version of the data collection, and ICPSR used the ZA interim version to produce the final version of the data collection. When possible, ICPSR produced the data set and codebook to be consistent with the standard format set forth in the cooperative arrangement.

In 1990, for the first time, the Norwegian Social Science Data Services (NSD) conducted a survey in Norway that was similar to surveys in the Eurobarometer survey series. The survey was organized in parallel with Euro-Barometer 34.0 and was administered independently from the "Surveys, Research, Analyses" (Eurobarometer) unit of the Commission of the European Communities (EC). The Norwegian Social Science Data Services sent the data set directly to ICPSR. ICPSR merged the Norwegian data collection into the interim version of Euro-Barometer 34.0 before producing the final version of the data collection.

EUROBAROMETER (a.k.a. EURO-BAROMETER) SURVEY SERIES

These surveys are the products of a unique program of crossnational and crosstemporal social science research. The effort began in early 1970, when the Commission of the European Community sponsored simultaneous surveys of the publics of the European Community. These surveys were designed to measure public awareness of, and attitudes toward, the Common Market and other European Community institutions, in complementary fashion. They also probed the goals given top priority for one's own nation.

These concerns have remained a central part of the European Community's research efforts -- which were carried forward in the summer of 1971 with another six-nation survey that gave special attention to agricultural problems. These themes were of central interest again in a survey of the publics of the European Community countries -- then nine in number -- carried out in September 1973.

After 1973, the surveys took on a somewhat broader scope in content as well as in geographical coverage, with measures of subjective satisfaction and the perceived quality of life becoming standard features of the European Community public opinion surveys. In 1974, the Commission of the European Community launched the Eurobarometer series, designed to provide a regular monitoring of the social and political attitudes of the publics of the nine member nations: France, Germany, the United Kingdom, Italy, the Netherlands, Belgium, Denmark, Ireland, and Luxembourg.

These Eurobarometers are carried out in the spring and fall of each year. In addition to obtaining regular readings of support for European integration and the perceived quality of life, each of the Eurobarometers has explored a variety of special topics. Also, attitudes toward the organization and role of the European Parliament have been explored in each Eurobarometer beginning with Barometer 7 in the spring of 1977.

The Eurobarometer surveys have included Greece since Autumn 1980 (Number 14), Portugal and Spain since Autumn 1985 (Number 24), the former German Democratic Republic since Autumn 1990 (Number 34), Finland since the spring of 1993 (Number 39), and Sweden and Austria since the fall of 1994 (Number 42). In addition, Norway has usually been included since the fall of 1991 (Number 36).

Note that beginning with Eurobarometer 43, the archival survey titles in these ICPSR series no longer contain a hyphen separating "Euro" and "Barometer," in keeping with current usage. Other archives may follow different naming practices for this survey series.

This series of surveys was originally conducted under the direction of Jacques-Rene Rabier. Since 1987, Dr. Karlheinz Reif and Dr. Anna Melich have directed the "Surveys, Research and Analysis" division of the Commission of the European Community, under the Directorate General for Information, Communication and Culture. From the start, Ronald Inglehart of the University of Michigan has helped make these data available to the social science community through the ICPSR. He wishes to acknowledge the support of the National Science Foundation, grant numbers SES 85-12100 and SES 88-09098 for the cleaning and processing of the study.

STUDY DESCRIPTION

This round of Eurobarometer surveys queried respondents on standard Eurobarometer measures, such as how satisfied they were with their present life, whether they attempted to persuade others close to them to share their views on subjects they held strong opinions about, whether they discussed political matters, what their country's goals should be for the next ten to fifteen years, and how they viewed the need for societal change. Additional questions focused on the respondents' knowledge of and opinions on the European Community (EC), including how well-informed they felt about the EC, whether their country had benefited from being an EC member, and the extent of their personal interest in EC matters.

Another major focus of the surveys was on how current social and cultural conditions affected the lives of individuals and households. Respondents were asked to assess general economic conditions and the current and future financial situations of their own households, to describe personal interests and the types of voluntary associations to which they belonged, and to comment on the prospective establishment of a Single European Market in 1992, the possible formation of an EC police force for combating terrorism and drug trafficking, which areas of policy should be decided by national governments and which by the EC, the rights of noncitizens in EC countries, the role of the EC in cultural matters, and the position that the EC should assume in reacting to upheavals in Central and Eastern Europe and in the Persian Gulf.

Other questions focused on major problems facing European youth, the qualities parents should encourage in their children, knowledge and use of different languages in the home, and the importance of foreign languages in general.

A separate section of the survey probed individual employment patterns, asking respondents to describe their employment histories, how changes in their family lives affected their working lives, times of unemployment, reasons for starting work again after a period of unemployment other than money, and occupation. This section also probed the role of child-rearing in family employment patterns by asking respondents to describe their experiences with child care, the distribution of household duties within the family, and their attitudes toward raising children in general.

An additional set of questions constituted a test for validation of the proposed variables for harmonization of demographics in the Eurobarometer. This section was a joint effort of the Commission of the EC and INRA (International Research Associates, EUROPE), under the supervision of ESOMAR (European Society for Opinion and Marketing Research).

The Norwegian Social Science Data Services (NSD) conducted a survey in Norway independent from, but parallel to, Euro-Barometer 34.0, which was incorporated into this data collection by ICPSR. Many of the questions in Eurobarometer 34.0 were also asked in Norway, though some questions were slightly modified. Respondents in Norway were also queried about additional issues, including their knowledge of the negotiations on European economic cooperation, their opinions about possible Norwegian membership in the EC, and their views concerning the advantages and disadvantages of Norwegian membership in the EC.

As in previous Eurobarometers, questions on political party preference queried respondents about which party they felt closest to, how they voted in their country's last general election, and how they would vote if a general election were held tomorrow. Additional information was gathered on family income, number of people residing in the home, size of locality, home ownership, trade union membership, region of residence, occupation of the head of household, and the respondent's age, sex, education, religion, religiosity, subjective social class standing, socio-professional status, and left-right political self-placement.

SAMPLING AND FIELDWORK (1)

Between October 10 and November 2, 1990, INRA (Europe), a European Network of Market and Public Opinion Research Agencies, carried out Wave 34.0 of the standard Eurobarometer, on request of the Commission of the European Communities.

Euro-Barometer 34.0 covers the population of the respective nationalities, aged 15 years and over, in each of the member states of the European Community. The basic sample design applied in all member states is a multi-stage, random (probability) design. In each EC country, a number of sampling points were drawn from all administrative regional units after stratification by individual unit and type of area (degree of urbanization). In each sampling point a starting address was drawn at random. Further addresses were selected by standard random route procedures. In each household, the respondent was selected according to a random procedure. Up to two recalls were made to achieve an interview. All interviews were carried out face-to-face in people's homes in the respective national languages. It is believed that Norway followed a similar sampling procedure, though this information was not provided.

WEIGHTING INFORMATION

Eight weight variables are provided in this dataset: WEIGHT SPECIAL UNITED KINGDOM (V7), WEIGHT RESULT FROM TARGET (V9), WEIGHT ADJUSTED TO STANDARD SIZE (V10), WEIGHT SPECIAL GERMANY (V12), WEIGHT EURO 6 / 10 / 12 (V13, V14, V15), WEIGHT EURO 12 + (INCLUDING EAST GERMANY) (V16). No weight variables are provided for Norway.

WEIGHT SPECIAL UNITED KINGDOM adjusts the British and Northern Irish samples to their respective proportions in the United Kingdom. All nation weights are included. Norway and Finland are weighted by "zero".

Unlike the "NATION WEIGHT I" in earlier Euro-Barometers up to 31 this weight adjusts all samples to the standard size.

WEIGHT RESULT FROM TARGET contains weights that adjust the weighted samples to make them representative for the countries from which they were drawn. It reproduces the real number of cases for each country. Norway and Finland are not included (weighted by "zero").

This weight corresponds to "NATION WEIGHT II" in earlier Euro-Barometers up to 31.

WEIGHT ADJUSTED TO STANDARD SIZE corresponds to "WEIGHT RESULT FROM TARGET" adjusting all samples to the standard size of 1000 respectively 300 (Northern Ireland) or 300 (Luxembourg) cases. Norway is not included (weighted by "zero").

Great Britain (n=1000) and Northern Ireland (n=300) are weighted as independent samples. West Germany (n=1000 and East Germany (n=1000) are weighted as independent samples.

WEIGHT SPECIAL GERMANY adjusts the East and West German samples to their respective proportions in the United Germany. All nation weights are included and all samples adjusted to the standard size. Norway is weighted by "zero".

WEIGHT EURO 6 / 10 / 12 contain weights that adjust each national sample in proportion to its nation's share in the total population of the European community countries in their historic composition:

EURO 6 only refers to the six EC founder-members (France, Belgium, Netherlands, West Germany, Italy and Luxembourg). EURO 10 excludes East Germany, Spain and Portugal, Euro 12 excludes East Germany (weighted by "zero"),

WEIGHT EURO 12 + (INCLUDING EAST GERMANY) contains weights that adjust each national sample in proportion to its nation's share in the total population of all the European community countries. East Germany and Northern Ireland are treated as separate samples. The national weights for each sample are included. Norway is not included (weighted by "zero").

Unlike the "EUROPEAN WEIGHT" in earlier Euro-Barometers up to 31a, this weight contains the adjustment to the standard size.

Table: Number of Respondents and Sums of Weights by Country

	Number of Respondents	Sum of WEIGHT U.K.	Sum of WEIGHT GERMANY	Sum of EURO WEIGHT 12+
France	1,022	1,000.00	1,000.00	2,008.21
Belgium	996	1,000.19	1,000.19	370.68
Netherlands	1,067	1,000.36	1,000.36	538.13
Germany	2,023	2,000.00	2,000.00	3,027.94
East Germany	(1,002)	(1,000.00)	(416.66)	(630.80)
West Germany	(1,021)	(1,000.00)	(1,583.34)	(2,397.14)
Italy	1,073	1,000.00	1,000.00	2,128.01
Luxembourg	301	300.00	300.00	14.03
Denmark	1,000	1,000.00	1,000.00	192.87
Ireland	1,022	1,000.00	1,000.00	115.96
United Kingdom	1,360	1,299.99	1,299.99	2,119.60
Great Britain	(1,047)	(1,267.50)	(1,000.00)	(2,065.86)
Northern Ireland	(313)	(32.49)	(299.99)	(53.74)
Greece	1,008	1,000.00	1,000.00	362.79
Spain	1,000	1,000.00	1,000.00	1,364.22
Portugal	1,000	1,000.00	1,000.00	357.83
Norway	1,011	-	-	-
Total	13,883	12,600.55	12,600.56	12,600.28

* The sums of weights are rounded to two decimal places.

- [1] VARIABLE NUMBER
This is the variable number for this variable. A variable number is assigned to each variable in the data collection and is used to associate the appropriate data definition statements.
- [2] ABBREVIATED VARIABLE NAME
This is an abbreviated variable name (maximum of 40 characters) used to identify the variable for the user. A list of the variable names can be found in the variable description list.
- [3] LOCATION AND WIDTH OF VARIABLE
Indicates the starting location and width of this variable when the data are stored in LRECL format.
- [4] MISSING DATA VALUES
Indicates the code values that may be considered as missing data. In this example, the code 0 and codes greater than or equal to 5 are missing data. An alternative statement found in other variables is "NO MISSING DATA CODES." Some analysis software packages require that certain types of data which the user desires to be excluded from analysis be designated as "MISSING DATA," e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although these codes are defined as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.
- [5] QUESTION TEXT
This is the full text, supplied by the investigator, associated with the variable. The question text and the numbers and letters that may appear at the beginning reflect the original wording of the questionnaire item. Text added by ICPSR usually appears within angle "<>" brackets.
- [6] CODE VALUES
Lists the code values occurring in the data for discrete variables. Variables whose values represent a range of numbers are usually not fully listed.

- [7] CODE DEFINITIONS
Lists the textual definitions of the associated codes. This text is also supplied by the original investigator and indicates the response represented by the code values. These definitions may also be augmented by ICPSR as necessary.
- [8] MISSING DATA VALUES AND DEFINITIONS
ICPSR has grouped these pairs of values and definitions in this documentation for clarity and ease of use. Abbreviations commonly used in the code definitions are "DK" (Do Not Know), "NA" (Not Ascertained), and "Inap." (Inappropriate).
- [9] UNWEIGHTED FREQUENCIES TABLE
ICPSR has included frequencies crosstabulated by the appropriate NATION variable. Unlike previous ICPSR codebooks, this codebook includes unweighted frequencies.

The following abbreviations are used to indicate countries:

France	FRA
Belgium	BEL
Netherlands	NL
West Germany	WGE
East Germany	EGE
Italy	ITA
Luxembourg	LUX
Denmark	DEN
Ireland	IRE
United Kingdom	UK
Great Britain	GB
Northern Ireland	NIRL
Greece	GRE
Spain	SPA
Portugal	POR
Norway	NOR, N

DATA PREPARATION AND FORMATTING

The data received by ICPSR from INRA (Europe), ZA, and NSD were checked for missing and duplicate records, for illegal (wild) codes and for consistency of response patterns. Errors discovered by these procedures were corrected or noted in this codebook. Indices and other derived summary variables were also checked and corrected as necessary. Complete machine-readable documentation was also created for this dataset by ICPSR.

ICPSR and ZA also added "inappropriate" (INAP) codes to indicate intentionally skipped questions when it could be determined that the appropriate skip instruction in the INRA questionnaire was adhered to for (almost) every respondent.

ICPSR and ZA have either added "<NA>" codes to indicate responses that had no code values in the original data (system missing values) or recoded variables to the "<NA>" or "<INAP>" value if the variable had been inappropriately coded. Illegal (wild) codes which ICPSR has been unable to document have been labeled as "<Undocumented Code>" where they appear in this codebook. Users should also note that, on occasion, the number of responses to a particular question may exceed the maximum indicated in the interviewer instructions.

The NSD conducted a survey in Norway that was similar to surveys in the Eurobarometer survey series. The survey was organized in parallel with Euro-Barometer 34.0 and was administered independently from the "Surveys, Research, Analyses" (Eurobarometer) unit of the Commission of the European Communities (EC). Many of the questions in Euro-Barometer 34.0 were also asked in NSD's survey, though some questions were slightly modified (Q22/V80, Q23/V82, Q39/V107, Q40/V108-V119, Q63/V183-V193, Q64/V195-V205) and no weight variables were provided. NSD queried respondents about additional topics including knowledge of the negotiations on European economic cooperation, opinions about possible Norwegian membership in the European Community, and views concerning the advantages and disadvantages of Norwegian membership in the European Community (Q72-Q85/V247-V277). NSD did not ask respondents the following questions: Q25-Q27/V85-V87, Q29-Q34/V89-V102, Q36/V104, Q38/V106, Q41-Q43/V120-V122, Q45-Q48/V124-V138, Q51-Q58/V141-V158, Q62/V181, Q63/V182, Q64/V194, and Q65/V206-V217.

NSD sent the data set directly to ICPSR. ICPSR made every effort to merge the Norway data into the Eurobarometer. It was not always possible, however, to apply filters or otherwise recode the Norwegian data to be consistent with existing ZA and ICPSR standards and practices.

Euro-Barometer 34.0 included a supplementary section (the E-questions/V496-V540) which constitutes a test for validation of the proposed variables for harmonization of demographics. The exercise was a joint effort of the Commission of the EC and INRA (Europe), under the supervision of ESOMAR. ICPSR made every effort to apply filters in this section consistent with ZA and ICPSR standards and practices, but it was not always possible to do so.

Question text and contingency text appearing in this codebook and ICPSR's machine-readable documentation are taken from INRA (Europe)'s English-language version of the questionnaire. Whenever a discrepancy occurs between INRA (Europe)'s codebook and its English-language questionnaire as to the coding scheme of a variable, the former is followed in the ICPSR documentation. Angle brackets (<>) appearing in this codebook delineate explanatory text added by ICPSR. In addition, angle brackets with asterisks (<*>) appearing in this codebook indicate explanatory text added by ICPSR to clarify peculiarities in this data collection.

Although the Norwegian data came to ICPSR in card image format, all data for this Euro-Barometer are being released by ICPSR in logical record length format. The data file is constructed with a single logical record of 680 columns per respondent. SAS and SPSS data definitions statements have also been prepared by ICPSR for the logical record length data file.

Q64_1 LANGUAGE SPOKEN DANISH
MD EQ 8 OR GE 9

Q.64. And which of these languages can you speak well enough to take part in a conversation (except your mothertongue)?
(SEVERAL ANSWERS POSSIBLE)

<The coding 'Not Mentioned' in Q.64_2-Q.64_12/V195-V205 is unclear for Norway. The Norwegian data set did not include a separate '<NA>' code for each of these variables.>

MODIFIED CODING IN NORWAY: "Danishi" excluded from the alternatives.

VAR 302 D16 INCOME
 LOC 375 WIDTH 2 MD EQ 0 OR GE 13

D.16. We would like to analyse the survey results according to the income of the people we interviewed (SHOW INCOME CARD**) Here is an income scale; we would like to know in what group your family is, counting all wages salaries, child allowances, pensions and any other income that comes in. Just give me the letter of the group your household falls into before tax and other deductions.

VAR 318 TR1 OCCUPATION FOR A LIMITED PERIOD
 LOC 397 WIDTH 1 MD EQ 0 OR GE 3

<* Variables 318-475 focus on employment patterns and child rearing. This section encompasses questions TR1-TR29 from the survey. *>

<* According to the survey questionnaire, different subgroups of respondents should have answered certain questions based on their responses to previous questions. These "filters" were not applied consistently in this section. Whenever possible, original data values were maintained. ICPSR has inserted comments (text between asterisks) along with the question text and code value labels for individual variables, where appropriate, to provide additional information for users of this section of the survey. *>

VAR 322 TR5 N OF CHILD ALTOGETHER - SEE DOCUMENT
 LOC 402 WIDTH 2 NO MISSING DATA CODES

ASK ALL

TR.5. How many children have you had, altogether? (IF NONE:
 CODE 00)

< EB34 - Q. - NEW >

<* The coding "NONE" in TR.5 is unclear ('00' was not coded
 in the original dataset) for all countries except Norway. *>

<* If TR.6 ("Year of Birth") contained valid punches for the
 first (V323), second (V324), or third (V325) child in the
 original dataset, corresponding missing cases in TR.5 (V322)
 were accordingly recoded for all countries except Norway. *>

<* If TR.5 (V322) and TR.6 ("Year of Birth") contained
 missing cases for the first (V323), second (V324), and third
 (V325) child in the original Norwegian dataset, the cases
 were recoded to '00' to be consistent with the coding for
 the other countries. *>

TR.24.3. - Who was mainly responsible for looking after this child during the day in his/her preschool years? (SHOW CARD** - RANK BY ORDER OF IMPORTANCE, 1 - USED MOST OFTEN) - THIRD CHILD

TR.24.3_A Yourself

<* In Norway, TR.24.3 was asked as one question and coded in the Norwegian data set as one variable. Each response code in the Norwegian data set was merged into separate variables (V453-V458) to be consistent with the data for other countries. The data were merged into code 1 for variables V453-V458. The TR.5/V322 filter was applied to these variables and the remaining cases were recoded to '8'. *>

VAR 490 C4 OCCUPATION RECODED - SOC PROF STATUS
LOC 598 WIDTH 2 MD EQ 0 OR GE 99

C.4. - SOCIO PROFESSIONAL STATUS

<Roughly half of the representative sample of the European community public was without paid work. Basing cross-analyses on "occupation" (d.17) would exclude half of the respondents from analysis. An alternative, also used in past Euro-barometers, is to base analyses on (non-marxist) concept of "objective social class" using "occupation of the head of household" as reference. In order to classify as many respondents as possible with respect to their socio-professional setting, a new classification was created called "socio-professional status". The following standards were used:>

<- For those in paid work it is based on their own present occupation.>

<- For those not in paid work, "former occupation" (d.18) was used, if applicable (retired, housewives having been in paid work in the past, temporarily not working, unemployed).>

<- For those never having been in paid work, "occupation of the head of household" (d.23) was used. If the head of household was not performing paid work at the time of the interview, his or her "former occupation" (d.24) was used, if applicable.>

<Consequently, socio-professional status is a classification "that comes as close to the respondent himself/herself as possible" but that draws upon additional background information to the extent necessary and available, in order to avoid a single measure of interviewees' socio-professional setting and to include the maximum number of respondents in the respective analyses.>

VAR 496 E4 AGE EDUCATION
 LOC 607 WIDTH 2 MD EQ 98 OR GE 99

<* Variables 496-540 constitute a test for validation of the proposed variables for harmonization of demographics. This section encompasses questions E1-E15 from the survey. *>

<* According to the survey questionnaire, different subgroups of respondents should have answered certain questions based on their responses to previous questions. These "filters" were not applied consistently in this section. Whenever possible, original data values were maintained. ICPSR has inserted comments (text between asterisks) along with the question text and code value labels for individual variables, where appropriate, to provide additional information for users of this section of the survey. *>

QUESTIONS E1 TO E15 IN ALL COUNTRIES EXCEPT LUXEMBOURG AND NORTHERN IRELAND

VAR 496 (CONTINUED)

I will now ask you some questions that may seem similar to what I've already asked. I need to ask them in a slightly different way.

E4 How old were you when you finished your full-time education?

<* The interim version of the data set included two E4 variables. Variables E4/V496 and E4 ESOMAR/V503 are identical with the exception of one case. One NA case in Spain in E4/V496 is coded 18 in E4 ESOMAR/V503. All questions in this section that have "Still Studying" INAP codes were filtered from E4 ESOMAR/V503. *>

<Actual number is coded.>
